>I believe the downward spin began with Dick Bash.

He may have been the "external" cause but there were folks inside
the agency who did not understand or appreciate ham radio and could
not understand why any resources had to be expended in enforcement.
Then along came the bad years of CB running wild and things went
downhill fast.

Gee ...

I've declined the AARP (for now at least - they started sending me
membership
solicitations on my 50th birthday - maybe some day I'll see a benefit)

The NRA would be of interest if I was still a hunter, but alas, the XYL is a
biologist and state-licensed wildlife rehabilitator, so for the sake of
marital
harmony, I've given up that hobby. (I have so many other things going on,
I don't know when I'd have the time for it anyway ...)

The AAA has never appealed to me ... I get good towing coverage for much
less through my car insurance and my new Ford Explorer also comes with
roadside assistance.

Skinheads ... well 'nuff said, I guess.

However, WRT the ARRL - as much as I've had some policy differences
with them over the years, they DO do a LOT of good things for ham radio,
and their member services and publications are also valuable.

All together, I made the value judgment to support the ARRL by maintaining membership for the past 25+ years (I should have become a life member years ago - I'd have really saved money over the years - but I resisted because of my
policy differences with the ARRL leadership in a couple of areas.)

However, with BPL, CC&Rs (don't affect me, but affect a lot of hams), and the good work that the ARRL/IARU did at the WRC on 40m expansion, I finally decided to become a life member and to work my policy differences from the inside as well as from the outside. If I live an average life span from
now, I'll just about break even on the $975.00 life membership. I also sent them $100.00 earmarked to support Ed Hare's work against the BPL threat.

I think that ARRL membership (with QST included) is a good value at the current
dues rates and find it hard to understand how anyone who's REALLY interested in ham radio and its future could justify NOT joining and supporting the good things
that the ARRL does - you don't have to agree with EVERYTHING they do or every position they take (I don't ...), but on balance they do much more right than
wrong, so I support them for that and joust with them on the things I disagree with.

WHAT? Must be a different "government" and "Chrysler" than the one
that I remember, where all the government did was to be the "final"
guarantor of loans that Chrysler was seeking from the private sector
banks, enabling Chrysler to get a much lower interest rate than they
could get without such "bailout". No government money was expended,
nor would any have been expended unless Chrysler defaulted on said
loans, which of course they did not do.

Here is a hypothetical situation:

Let's say that for one reason or another that Hams never got back their access to the airwaves after WW1.

Fast forward to January 1, 2004. In 2003, amateur radio was reborn, with testing and privileges to commence on this first day of 2004.

What should the testing regimen be?

- Mike KB3EIA -

7. Do Hams Tip?

Newsgroup: rec.radio.amateur.policy

Linda Sue Williams, 41, is a waitress at Miss Valinda's Country Kitchen. After waitressing for over 20 years, she is somewhat a judge of male character.

Linda Sue's customers are mostly blue collar family men. They come in, drink coffee, read the paper, order breakfast and make a little small talk with Linda Sue and the other waitress staff. The one and two dollar tips they leave Linda Sue are appreciated. Sometimes on Fridays a large group will sit at one table, and Linda Sue may make as much as $20 in tips for the table.

Once a year the ham radio hamfest comes to town, says Linda Sue. They demand endless cups of coffee, dump more food on the floor than they do in their fat bellies and expect instant service, while making lewd remarks to me, says Linda Sue. The table is filled with their expensive little toy radios and palm computers. They brag endlessly what important jobs they have, how many people work for them and how many college degrees they have.

"If only their tipping habits were as big as their inflated egos," said Linda Sue. When they leave, I am lucky if I find a few pennies and dimes left among all the trash. Their body odor lingers for hours after they're gone.

"Hams are smelly cheap braggarts," says Linda Sue.

Better. I just posted some pix on our website, from FD in 1968. My guess is we have about three times the number as we did then.

> Are new folks welcomed?

Yup. During the day, I do no operating at all, just control op the GOTA station and talk to new people when any show up. And we have new people show up.

>Is help provided?

Of course
> If so then consider yourself lucky.

Yeah, lucky enough. If you want, you can bitch about the ARS. Or you could do something about it.

Or are you one of those hams you bitch about in a previous message?

Just like you should! I'm amazed by the number of hams that seem to
thing that the ARRL has to agree with all their personal opinions. I
wonder how many of those type are married! 8^)

I wonder how many of the priveliges we enjoy - and many take for
granted - in the ARS, would be around if not for the ARRL.

Whoa there! How could that happen?

And if it somehow did, what spectrum, power and modes would be allowed? What services would give up spectrum?

> What should the testing regimen be?

Depends entire on what the "new" service in this alternate-history line is like, don;t you think?

Your SIG says it all. An EXTRA in NO CODE INTERNATIONAL? I see you are a joiner. The more you belong to the better it is.

Help insure the survival and prosperity of ham radio? I think not. Insure the life of the ARRL and manufacturers? YES! No code is killing ham radio. See you on channel 22 good buddy.

Most of the NCI Directors are extras, of their national equivalent thereof.
One has DXCC CW only. What's your point?

> I see you are a joiner. The more you belong to the better it is.

I am ACTIVE in the things I've listed, except for TAPR. I am into
digital communications but have not been active in TAPR projects
for a number of reasons. However, I am VERY active in all of the
others. (I didn't list my local club/RACES/ARES ...) So, it's not a

"the more you belong to the better it is" thing. What's your point?

> Help insure the survival and prosperity of ham radio? I think not.
> Insure the life of the ARRL and manufacturers? YES! No code is killing
> ham radio.

Were it not for the no-code tech license since 1990, I'd bet we'd have
about 1/2 the number of licensed hams in the US that we have now.
(and commercial interests would be better positioned to take some of
our prime spectrum for lack of use)
So, how is no code "killing ham radio" ???

> See you on channel 22 good buddy.

Sorry, you'll have to find someone else to talk to on your favorite
frequency.
I don't have any equipment that will transmit there. (But I do have 3 rigs
that cover all of the amateur bands (except the 5 channels at 5 MHz) from
160m-70cm, all modes, and can be run without AC mains power - main station
rig, mobile (I'm in the process of installing that rig in a new vehicle),
and a QRP
station I use for backpack/travel use.)

How many (ham band) rigs do you have? Can you run for extended periods
(weeks or more, if need be) without commercial power? How active and
well-prepared are you?

Oh, you're just trolling? That's become abundantly clear ... why not try
another stream? I think the bites are about to dry up here.

None of them, I'd say.

Yes, ham radio was shut down during WW1 and there was a strong contingent that did not want to allow hams back on the air after the Armistice. But there were several other severe threats. Here's just a few:

- in the 1920s there were at least three radio international conferences where the very existence of amateur radio hung in the balance. At that time there was a strong opinion outside of the USA and a few other countries that the airwaves whould be reserved for government and commercial use *only*. Some countries with significant amateur populations (like Great Britain) proposed restrictions that would have essentially killed amateur radio (ten watts and dummy antennas only, for example).

The very concept of allowing "regular people" to simply set up their own stations and communicate was alien to the mindset of many government officials. ARRL folks like Maxim, Warner and Stewart had the unenviable job of changing their minds. (Mrs. Maxim played a very important role as translator at the Paris conferences, btw). Indeed, amateur radio did not gain international treaty recognition as a separate radio service until 1927.

- The WW2 shutdown and reactivation went much more smoothly than the WW1 experience, in part because of ARRL leadership in dealing with FCC.

- Interference to radio broadcasting was a serious problem before WW2, due in part to lack of BC receiver selectivity. It reached the point where hams in many areas had to observe "quiet hours" and were not allowed to transmit during much of the evening and weekend. This situation reoccurred with TV in the 1950s to the point that a "traveling TVI roadshow" was put on by ARRL Hq. W1ICP and others traversed the country with cars full of equipment to demonstrate that TV and amateur radio could coexist without interference.

And now we have BPL.

Exactly. Working from within is generally the most effective way to bring about real, long-term change. However too many other people just want to be back seat drivers or focus on a single policy they don't like and "throw out the baby with the bathwater" so to speak.

Naw, not a chance, Mike. JEP's use of language doesn't quite have that flowery lilt to it. To emulate Vipul, he'd have to insert some terms like "only-morse" and a few whopping tales of radio amateurs' love affair with food or about how some group traveled to some spot on a DXpedition and then spent all of their time operating radios.

Absolutely. Break time usually finds the newcomers making a beeline to the
oldtimers and lively discussions about items they need help with. Several
of us are on an "Elmer's phone list", all of us regular talk to new people
over the air and give help, and several of us regularly teach classes with
many others putting in a little help at one or more sessions of a class.

None as the ARS would have remained closed down after World War I. There
was no intent on the government part to ever re-establish those privileges.
While this is in the distant past, we don't have to look too far back to see
loss of spectrum and proposals from the government for loss of spectrum.

Of course you are correct, sir! My explanation was incomplete and misleading on the use of taxpayer dollars to bail out Chrysler.

However, the point is still valid. The Feds got involved in saving a major US corporation. Taxpayer dollars and government resources certainly *were* spent in studying the problem and setting up the loan guarantees, even if Chrysler never got a nickel of govt. money directly.

And the question remains - was that bailout a "conservative" or a "liberal" action?

Name and Places Search

This form can be used to search for names, cities and towns, states
and Zip Codes. The format is free form meaning you can input whatever
you like into the box. Note: callsigns are excluded from the search.

Enter name or keyword(s) to search

Use Simple Search help

To search for the name or address of a club or person, enter the first
and/or the last names (in any order), or a part of the address (like
number and street) and/or the Zip Code. Go get Similar Zip codes, use
the star (*) such as '85*' which returns mostly Arizona zip codes.
Comma's and other punctuation are ignored. Both upper and lower case
letters are treated the same.
Click here for more advanced search options...

There are 0 records matching 'jatowski'.

No, it's bad grammar. Good grammar would be "How many minutes does it
take to send a FAX image?"

The important aspect of getting to any truly "new" licensing scheme
absolutly requires either some free upgrades, loss of some privileges
or a combination of both. Hans's view of the future takes into
account a "least" loss approach plus free upgrades. I could easily
support Hans's vision above. The one differing aspect I think
would be that the "C" license would more likly have a 100W
limit since 50w would exclude a great many rigs.

Personally, I have no problem with free upgrades if it makes
sense and is done to (1) simplify overall and (2) avoids taking
significant privileges away from anyone already licensed.

That hasn't been my experience. First, I haven't seen that many rule violations across the board. Most operators tend to stick to the rules, or at least make a darn good effort to do so. But, second, I certainly haven't seen that among those who tend to be technically oriented. If anything, they tend to go overboard on the rules.

> I think 50 to 100 questions ought to
> do it. Only the pool would need to
> be several hundred questions, just as
> today's pools are far larger than the
> number of questions actually
> occurring on any one exam.

I assume you want an equal number of questions for each exam. If so, you still haven't answered the key point of my last message. The current exam concept is basic exams for entry into each license class. Since you're advocating much more extensive exams, are you saying the current concept should be thrown away? If not, how do such large exams fit into the current concept? None of the other FCC licenses, except those professionally oriented, have such an extensive exam system. Are you advocating that we turn the exams for the Amateur Radio service into something similar to the exams for the professionally oriented licenses? If so, are you also advocating that we change the concept behind our licenses, and, by extension, the radio service, at the same time - in other words, the elimination of "amateur" from the Amateur Radio service?

> How many questions has she had to
> pass to get her law degree and to
> pass her bar exam?

It is patently absurd to compare the Amateur Radio license exams to the final exams for a law degree or any other college degree. I was more than generous when I compared them to the tests for a single college class. And, as I said, my wife only had 50 questions on the tests to pass her international law class.

> On the Tech exam there are only 5 rules
> questions. That means missing all 5
> gives you a score of 30, which is passing.
> This gives you room to miss several other

> questions on the exam. (snip)

Again, do you have anything to suggest this (a person missing every question on the rules, yet still passing the overall exam) has ever happened, much less commonly so? If not, you're doing as some others have done - offering a solution without evidence of a problem (in other words, an answer seeking a question).

> The current question pool however no
> longer includes the data rates for digital.
> This is quite important for legal operation
> that does not exceed the bandwidths for
> these modes. (snip)

Again, is there a widespread problem with this? I certainly haven't heard any complaints in this regard.

> Difference of opinion is fine but don't
> assume that the FCC knows what they
> are doing. Just because they've said it
> doesn't make it true. They have a long
> history of mistakes.

Speaking in general (not specifically to you, Dee - your comment just offered an opportunity to spread this to a wider issue to more directly address the subject line of this thread), the anti-FCC sentiment now spreading in the Amateur Radio community bothers me greatly. This same mentality started spreading in the CB community many years ago, with disastrous long term results. The FCC isn't our enemy. Any ruling we disagree with isn't necessarily a mistake and any mistakes they've made are far outweighed by the good things they've done for us (like the continued support for this radio service). In many ways, some in this service act like a bunch of spoiled brats. We have more frequencies, and more privileges on those frequencies, than just about any other non-government radio service. But these spoiled brats will never be satisfied - endlessly demanding more attention from the FCC over often trivial issues and then whining about how horrible the FCC is when things don't go their way. This behavior is extremely destructive, both for our relationship with the FCC and for the spirit of this radio service. And that, in my opinion, is the main problem with Ham radio today.

One aspect of almost all hobbies" is the cost to play
which often results in an older cross-section of participants.
The same is true for antique cars, model railroading, etc.
Add to that the available "free time" which most older
folks, especially retirees, have.

Since a person still in college obviously hasn't yet got a law degree or passed the later bar exam, I thought Dee's question was rhetorical. Therefore, I didn't answer in that vein. However, before anyone takes it seriously in regards to my wife, let me add that my wife isn't seeking a degree in law. The international law class was just one class leading to a degree in another subject.

Hans,

Apologies for misunderstanding your position. As to my
view that either freebies or losses are needed to get to a
new license plan, I truly think that will be the case. I doubt
the FCC wants to have a hybred licensing scheme in the
long run. That's my perspective. Assuming "free upgrades"
as was noted in your post, what's the overall harm?

Cheers and Happy New Year.

You're a bright guy, Bill, so surely you can see the "overall harm", but maybe you're having some trouble shaking off the effects of your New Years Eve celebration, so I'll spell it out for you.

Today, passing the Amateur Extra exam is the qualification required for full amateur privileges. An existing General or Advanced licensee has passed a less comprehensive set of examinations, and has not (by FCC definition) demonstrated qualification for full amateur privileges.

If FCC suddenly upgrades all General and Advanced licenses to Amateur Extra, then ipso facto and ipso jure the qualification required for full amateur privileges has been lowered by two full steps.

Given that sad state of affairs, now any NEW amateur hopefuls can reasonably plead that any examination more comprehensive than the current General discriminates against new applicants.

In some circles I've heard that called "the Great Dumbing Down" of amateur radio.

Only on a one-time basis. The question still is, what is the harm of
such a one-time "fix."

> Given that sad state of affairs, now any NEW amateur hopefuls can
reasonably
> plead that any examination more comprehensive than the current General
> discriminates against new applicants.

They can plead all they want...doesn't make it so. The FCC could
certainly counter argue the upgrades were a one-time need to
simplify the overall license structure. YMMV

Cheers,

May I, Bill?

While I do not think No-Code Int'l. is "killing" ham radio, I do believe it is fostering a bad mindset.

If there were truly no no-code AR license available, I'd agree that the Morse code exam is a barrier to those who neither possess the "Morse aptitude" (For lack of a better term.) nor wish to utilize it OTA. However, there's been a no-code ticket available for over a decade now...with some pretty generous RF real estate and power limitations I might add.

IMHO, No-Code Int'l. has:

1. Encouraged the idea that it is preferable to lower the requirements through mass petition rather than encourage individuals to strive toward higher achievement. Some refer to it as "lowering the bar."

2. Made the notion of more privileges via higher achievement appear as if it's fundamentally wrong. If one wishes to upgrade, then meet the requirements necessary to achieve that upgrade. (Not just the requirements we *want* to meet.)

I've read enough posts here and on the countless code vs. no-code articles on the various ham radio web forums (As well as the actual RM petitions and their respective comments.) to confidently say that neither side can claim an overwhelming numerical advantage over the other. So I think it's safe to say that not all ascribe to the "barrier" notion.

What will happen? Well, the squeaky wheel gets the oil so I think we can be reasonably assured of the elimination of Element 1...at least for Technician "+" privies. Personally, I'm prouder to have achieved rather than squeaked.

If N2EY's latest post under "ARS License Numbers" is accurate, and if the "fix" was instituted today, the number of Amateur Extra licensees would increase by 213% and the vast majority (69%) of this enlarged "Extra Class" would not qualify for the license under yesterdays rules or tomorrows rules.

> simplify the overall license structure.

Their counter argument would utterly fail, because they'd first need to prove that the "one-time need" over-rides the harm of a massive influx of underqualified (by their own rules) individuals into the top class of amateur operators. Judges rule on logic, not administrative convenience.

>
> The question still is, what is the harm of such a one-time "fix."
>

Trivializing this as a one-time "fix" shows how little you've examined the issue. Instead of a one-time "fix", it would be a one-time "hammer blow". The answer still is exactly as stated in my previous message.

Cheerios and bran flakes to you to,

Big wall rock climbers and vertical cavers need to deal with the same,
and some of their gear and techniques may be helpful.

For example, when suspended on a rope, in harness, you could use a
loop of cord with a Prusik hitch, attach it to the main rope, and give
yourself a loop to stand on and get some more leg circulation.

There are other techniques used by belayers, as they may be in place
for extended times, and not able to let go of the rope their partner
is on.

As always, this is dangerous stuff, and should only be done with
proper instruction and equipment. Gravity is not always your friend.

Happy trails,

The bites don't seem to drying up at all. I found a few nibbles yet.
The Extras on the no code board have to 5wpm Extras. Couldn't be real
Extras that had at least one exam in front of a FCC examiner. Passed
at least one test at a real FCC examination site. Actually learned
radio theory.
The radios I own are not your concern. I will say I own enough to
operate all bands and modes. Can stay active as long as some kind of
power is still available.Also have had a Ham ticket long enough to
know exactly what the ARRL has really done with the incentive crap
from the 60's. Remember, it was Maxim not the ARRL thst got the
frequencies back after WW 1. Maxim was a mover and shaker, unlike the
deadheads in there now---The Good Ole Boy Club! You guys keep nibbling
because you are afraid to admit you are wrong.

Aww, don't make me define too much Jim! Okay, lets say that in the rebirth, fueled by concerns for homeland security, that a a loosely organized group of non-professional communication savvy people that might be able to respond to disasters or the is made.

Assume that it is decided that this group should have some technical abilities, so that if need be, they might stand a chance of getting a station operational under adverse conditions.

The philosophy is that these people would pursue the service as a hobby, working for enjoyment while honing operational skills.

Let's say that amateurs are allocated some frequencies. I'll assume that the bands I not will be similar in width to what we have now:

2 meters
10 meters
20 meters
40 meters - or nearby, away from broadcasting frequencies
80 meters

The various frequencies are chosen to take advantage of propagation characteristics.

No UHF or above, no 160 meters.

>> What should the testing regimen be?

Experience tells me there is something missing from their
explanations. For those who do much climbing the hazards, or at least
some of them associated with staying in the same position are known.

At my age I still do a fair amount of tower climbing. A typical tower
climb is 3 to 4 hours with no few running up to 6 or 7. The longest
have been on the order of 8 to 9 hours. The longest in the last two
years was between 6 and 7 hours.

I always use a "tag line". which they refer to as an arresting
harness. Actually it's a double line with two clips and they are only
a bit over 3 feet long. So, if I slip I won't fall far, but it's gonna
hurt! It does not get in the way of work. It can be clipped to the
side, or in front but attaches to the D rings on the belt. A simple
"tag line" makes climbing safer and easier. Even a simple one
properly attached does not have to get in the way.

I do not believe in the harnesses I see advertized and I do not
believe in using Nylon harness or safety belts. Although we used them
where I used to work, we considered them disposable with a very short
life.
"As I recall" we replaced them every 8 months. Remember, Nylon does
not stand up well in direct sunlight.

I avoid the harnesses as I particularly do not want my legs hanging
or something that will encourage a situation where I can work with
them hanging. Sure they are comfortable, but I stand! If the work is
too strenuous to stand it should be done in some other manner. If the
climber can not keep his or her weight on their feet for the duration
of the climb they should not be climbing in those situations.

I wear a Kline, free floating leather belt which is 5 inches wide. The
belt itself is of double neoprene impregnated nylon monofilament. I
have it inspected regularly. The pole strap is of the same material
and easily extends to go around a tower 2 foot on a side, yet works
just fine on a small TV tower. I knew I'd be using the belt a lot so
I purchased the same type as used by the line and tower crews. I do
see that they are migrating tot he harnesses probably due as much to

OSHA as any other reason. Who knows, ,maybe after this study they will be moving away from them, but they are active and rarely remain in one position for long, so I don't see this as a hazard they would be exposed to very often.

On one job a few years ago, they came up short on some parts. So I slid into the tower, got comfortable and waited about an hour and a half. The temperature was well over 90F. I was in a vertical position, it was hot, and I did very little moving. I wore a wide brimmed hat, long sleeve shirt, and work pants. (and leather gloves) There was no problem nor was there any indication of one. OTOH I sure was getting bored. However it was a position that required I move my legs at regular intervals to stay comfortable.

"I think", although I disagree with their wording, they are referring to a "motionless" upright position. I also believe that although the bent knees at "parade rest" *might* help, it's the movement of the leg muscles that forces the blood out, not just using the muscles to support the weight. Those legs have to *move* to keep the blood from pooling.

One thing I did not see them mention, or I missed it, is the greater likely hood of developing blood clots in the legs when they are motionless or just hanging for long periods. Hanging is far worse than standing on rigid, straight legs.

I would reiterate that any one who feels they need to use a harness of the type in which you can sit to make life easier on a tower should not be climbing at least for nothing more than a very short job, but not the ones that take over half an hour. OTOH there is nothing wrong with wearing one for convenience if handled properly. Tower climbing requires the climber to be in good physical shape, not just for the climbing, but for safety and health reasons.

If the climber is over weight, out of shape, not feeling good, or feels they need additional support to be able to do the job, they should stay on the ground. It is not something that should be taken lightly.

One of the greatest hazards has been the unknowing staying "up there" too long and then being too tired to climb down. On rare occasion some one will climb up a ways and suddenly discover that "This is not for me!" Going up a tower and then helping someone climb down one hand or foot at a time is a rather unique and tiring experience. (and it takes a very long time) At least he didn't go up to 200 feet before looking down. <:-))

> Here is a hypothetical situation:

97.1 To get an Amateur Radio license, you are required to pass
a technical test to show that you understand how to build simple
equipment which meets spectral purity specifications of (.....blah,
blah, blah). You will be issued a license and callsign when you
pass the test. Transmit your call sign once every 10 minutes when
on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your bands. Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate
and do public service and talk to strangers in far away lands and
launch communications satellites into space and any other cool
technical "radio stuff" you may think up. The government doesn't
care what mode you use for any of this, except that 10 years from
today, all non-digitized modes will be retired.

97.5 Play nice. We'll try to keep the CBers out of your hair.
Deliberate interference, unresolved dirty signals, or other asinine
behavior on your part will cause Riley Hollingsworth to come and
permanently kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

Just as the amateur service thrived on the challenge of being "banished" to
the
shortwaves back 80 years ago or so, I think another "challenge" is needed to
revitalize the spirit of experimentation and invention. We need to be
kicked
out of our comfort zone.

Give us the authority to freely tinker, explore, innovate, and generally be
"hams" again. That's how we "colonized" the electromagnetic spectrum,
"proved
it in", and "made it safe for commerce". As long as we don't spill out of
our assigned segments, let us play without technical micro-management.
Who knows what we might develop!

Roger, (hello, haven't talked with you in a while) I did a bit of not-so-tall tower climbing as part of my job while I was in the USAF communications biz and I quickly discovered "This is not for me!" Heck, I even got scared once or twice on the so-called parachute ride at Knott's Berry Farm hehheh.

The FCC doesn't have to prove anything. The burden of proof would
be on those that oppose what was done. Government regulations have a
presumption of legality to start with.

Call it whatever you want. I guess the states "lowered" the bar
when they stoped testing new drivers on manual gearbox autos.
The reality is the morse test is past its prime...and the entire body
of international countries have seen fit to eliminate morse as

an international treaty element.

I see it as fundamentally wrong when the added priviliges
have no rational link to the added/higher achievement attained.

Yep, the dumbing down of America. The masses can't pass the test so we will make the test easier. Notice how they skirt the issue of having passed any test in front of a FCC examiner. The VEC program is another farce. Why not put the little piece of paper in a corn flakes box. At least you would have breakfast.

It wouldn't be amateur radio.

Amateur radio derives from that time and place where radio began.
It was there before there were rules, or most of the technology that
came later. It also came before there was much clue about what
the new technology could be used for, and before there were well defined
radio services.

Anateur radio exists because hams staked out the territory before
most people knew about radio. Amateur radio did not see others
making use of the technology and then claim they needed space;
they put the technology to use, and helped push the technology
and the applications that came later.

For something to start now, one has to wonder what the purpose
would be? It's certainly not about getting in on emerging technology.
Without the history of radio behind it, then there is no way it
would be the same sort of service. Even things like contesting
derive from those early days, when being able to reach further
and further was a reflection of the effort put into the equipment
and antennas, and the contests were a means of testing it, or
testing radio itself. Witness the TransAtlantic Tests in December
of 1921; a form of contest yet the whole point was to see if
those useless shortwave frequencies where hams had been relegated
once rules were set in place could actually be used to span the
Atlantic.

People are forever saying that amateur radio can't compete with
today's technology, when everyone can get a cellphone or an FRS
transceiver, and use the internet. Put in those terms,
there is no point to amateur radio. And anything created
today would take that into consideration.

A very important part of amateur radio is it's history, because it's an important history, not just to the hobby but to radio itself. Take that away, and it could not be anything close to what it is now.

I don't think the FCC will ever again go for anything that increases the
total number of elements. However, if the licence structure were ever
rationalised to a two-tier system, then your idea might fit in. One rules
and regs test, and two theory tests, with the higher theory test giving
access to, say, 20m and the WARC bands, plus more power (1500W versus
200W).

I have my Purple Martin birdhouse mounted on my tower at a height
of about 20 ft. Last year, I wished I had not been wearing my safety
harness when I was surprised by a six foot long rat snake during a
nest check. The harness forced me to face the snake when I would have
much rather jumped. :-)

You don't learn CW as a language, you learn morse code. One is a method of transmission and one is an encoding scheme sometimes carried over a method of radio transmission. There is a difference.

Of course hams tip.

All you have to do to get a ham to tip
is to apply sufficient lateral force
above the ham's center of gravity.

This result is, of course, completely
and accurately predicted by
Fudd's First Law of Opposition:

"If you push something hard enough, it will fall over."

As I stated here before, I would like to see the exams get expanded to something similar as to what has been required in the fire service, at least all of the ones I have taken. The least amount of questions was 150, and the most questions was 250. AND THE QUESTION POOLS WERE NOT PUBLISHED.

Now, what is interesting, in the 2+ foot tall stack of books I had to use for my Firefighter 1 and Firefighter 2 certifications had all of the questions within the chapter tests, quizes, pre-tests etc. So, basically if one did the homework like they were supposed to, then they have actually seen the questions. I distinctly remember when I took my test, seeing the same identical question on a piece of homework that was on the final exam, many times. I actually like the way IFSTA organizes and sets up their instruction books. Not only do you have a main book for the instruction/reading, but workbooks to put the chapter's contents to practical use.

I would definitely like to see all three tests (tech, general, extra) go up to at least 100 questions each. And if the question pool is released, at least only release the questions, and not the answers. At least then the potential testee would have to look the material up. Hell, I would even re-test if I had too under this type of test. In fact, if ham radio is "sooo important" and "actually saves lives" I would think that retesting every ten years would actually be a good thing. Not only would it show that the licensee retained knowledge but might even show if he/she progressed at all.

Based on what you gave so far, those volunteers would be sworn in as members of the Sheriff's Radio Reserve and given assigments to use commercial equipment and departmental procedures on those frequencies, similar in a lot of respects to CAP and MARS operation.

The local Sheriff's Deparment tried to do that when we (AREC/RACES) approached them to be a "served agency". Because we were organized and operational before that, we could tell them to play another tune on their trombone because we report to the Emergency Management folks some of whom are hams anyhow.

I've seen them have to learn the rules "the hard way" because they weren't required to learn them for the test. Generally this has just been informal warnings from other hams or warning notices from Official Observers. Good intentions don't get anyone anywhere.

Nope you assume wrong. I suggested simply adding a separate rules test, perhaps taking the place of the code test by the way although I prefer a code test stay. The remaining tests would stay the same except that the rules questions in the current tests be replaced with other material. i.e. The Tech test stays 35 questions but those 5 rules questions would be replace by 5 other questions. I stated that in other posts and suggested

areas from which such material could be chosen. I was illustrating that there is a wealth of material available.

LOL! Is "ham-tipping" anything like "cow tipping"?

Sorry for the wrong assumption. I'm still not convinced of a need to change the license exams, but I'll let it go with what has already been said.

<wk3cqth@wk3c.com> writes:

>Were it not for the no-code tech license since 1990, I'd bet we'd have
>about 1/2 the number of licensed hams in the US that we have now.

Not a good bet, Carl! Good thing nobody will take you up on it.

For one thing, the Tech license lost its code test Feb 14, 1991, not in 1990.
But that's a minor point.

Take a look at the number of new hams per year and the growth of US licenses
from Feb 1991 until today. Then compare to the number of new hams per year and
the growth in a time period of the same length previous to Feb 1991. You'll see
that that the Tech's loss of its code test in Feb 1991 did cause an increase in
the number of new hams. But without that increase, we would not be down to
340,000 US hams by any reasonable scenario. Heck, there are ~423,000 US hams
today who are *not* Techs - that's a lot more than 1/2 the ~683,000.

Yes, there are almost 260,000 Techs today - but a large number of them are
actually Tech Pluses whom the FCC renewed as Techs since April 2000.

See how it's all in the definitions? Some would call the Chrysler bailout and
other
similar deals "corporate welfare". Others would say they were a smart move that
resulted in more jobs, more economic growth and more ROI for investors.

Take a good look at any of those government programs for the "poor unwashed
public"
and you'll see that most of them can be viewed either way.

>
>Not even very imperfectly.
>
Consider the old "ABC" scheme, though.

There were basically two levels of license back then - Class A, with all privs,
and Class B/C, who could not work 'phone on any HF band between 3 and 25 MHz.
(Class Bs and Cs could only work 'phone on 160, 11, 10 and VHF/UHF).

Both licenses required the same code tests. The Class A required the Class B
written *and* a more advanced written test that focused on theory, particularly
'phone techniques. Class A also required a year's experience as a Class B or C,
and the tests for Class A (all of them - code and theory) had to be passed in
front of an FCC examiner.

The philosophy (as I understand it) was that it took more technical knowledge
and practical know-how to put a 'phone transmitter on the air properly. So the
FCC required more tests and experience before a ham could use 'phone on the
most-crowded and longest-range phone ham bands then in use.

Of course there were all sorts of unintended consequences. Hams who had little or no interest in 'phone had no reason to go for Class A. 160, 11 and 10 were busy with Class B 'phone ops. The system worked a real hardship on hams who lived a ways from an FCC exam point, too.

Buit maybe that sort of system is a starting point for what you're talking about, Bill.

Everything is a compromise<:-)) Although I'd say finding the snake
would require a lot higher odds than seat belts Vs being thrown out of
a car. <:-))

Bout all we have in Michigan are Rattle snakes (Missaguga - usually a
little feller) and assorted non poisonous ones. Naturally you know
which kind got me in the upper arm when trimming the hedge around the
house.<sigh> I was black and blue from darn near elbow to shoulder
although at least it didn't make me sick. Then again it was only
about 14 inches long.

Like you I was looking at a bird's nest, which in this case was in the
hedge. I reached in to look at the birds (4 little ones in the nest)
when I felt a burning on my upper arm. I thought I'd picked up a
splinter and the pine sap was burning until I saw the two little holes
in my arm.

The drawback to tag lines and safety belts at 100 feet is the likely
hood of coming across a Yellow jackets nest inside the mast or boom.
They are nasty tempered little suckers.

I was just looking to see if I had any photos of the nests I've run
across in the back yard up on my web site, but didn't find any. I
have a couple to put up that show one nest about a foot across.

The last two years I have destroyed about 30 to 40 nests a year on our
lot which is only 200 feet on a side.

It is only "tired" if you don't have the cajones to keep up,
Brain.

It's not about "class distinctions", unless that's all you fixate
on, Brain. It's about meeting the requirements of the Basis and
Purpose of Part 97, and meeting Congress' expectation that in return
for our generous allocations.

By the way, our allocations are by no means guaranteed. Too bad
people like you can't see past your own selfishness to see that.

> > Obviously you do not concur with the FCC's "Basis and Purpose" of the

> There is nothing more to be learned!

I don't know where you got that "obviously" stuff, Brain, except
to make it up.

I've very clearly stated on several occassions that my learning
curve didn't stop with my Extra.

Please stop being arrogant.

> You couldn't be more wrong. Again.

I'm not the one who just made a very obvious assumption based
upon a personal prejudice, Brain.

> > A "single license" concept does not support that premise, Brain.
>
> It does. Unless you believe that once you obtain Amateur Extra that
> all learning stops because there is nothing new to be learned.

Ok, MinnieLennie...Here again is yet another opportunity for you
to "show (me)up" by providing a quote FROM ME wherein I stated
anything even remotely like "...all learning stops with the Amateur
Extra test".

> > A tiered one does.
>
> No more than a one license ARS.

Then this proves you ignorant of the facts, Brain.

There is not a single aspect of our lives that suggests a
"one-size-fits-all" ANYTHING works, Brainless. Our educational
system, our society in general, religions, politics, etc.

Unless you can provide some tangible examples that contradict
that?

> > Was that too difficult for you?
>
> Trying hard to keep your position at the top of the hill is sooo
> transparent.

I don't have a hill to be on top of, Brain.

That you percieve that I do means you have an inferiorty problem
that keeps you in a subjugated position. Deal with it, Brain.

> Allow the ham to show the world his real achievements, not some
> government supported and forced Merit Badge system of false
> achievements.

You are truly lost, Brain....wrapped up in symbology, rhetoric
and the need to denigrate and demean anything you cannot or will not
endeavor to understand or accept.

Pity you.

My observation is as substantiated as yours. You can't prove anything.
Regarding cost to play, Ham radio only costs what you want it to cost.
I have put together a station for under $100 US. Not new and certainly
not the station I really wanted but it did work and I did QSO many
other stations. Cost is not a factor. Free time is what you want of
it. At 20 I had time if I wanted to take it and at 50 I can still find
time for the important things or what is important at this time.
Regarding costs, ther lays part of the problem. In the 60's I always
wanted that Drake '4' line. Couldn't afford it. Settled on a used
equipment and homebrewed many accy's. Todays out of the box operator
couldn't solder a connection if their life depended on it. Can't
trouble shoot a broken receiver or transmitter. Can't draw a circiut
for a simple crystal controlled transmitter, can't figure the length
of a half wave dipole, can't scrounge parts, etc.....

At least I have never encountered snakes or wasps on those rare occasions I needed to go aloft to fix or retrieve a lose halyard. It's only 35 feet above deck but at sea in a light chop it swings about two to three feet with no one up there, add my weight it swings about five to seven feet. So I tie myself a safety harness from 3 strands of 5/8 inch Yacht Braid and secure a double line for hauling to a rigging ring. It's safer than a belt, and while you can't fall out you can get a bad case of motion sickness. I use flying jam cleats to serve as climbers so up and down are slow. There are no mast steps nor anything to grab except at the spreaders. So I try to avoid going up if at all possible. I sail mostly in the winter, and the water is cold!
My antennas are all hinged, so I never climb them!
I think you need to make some accommodation when you pass 65.

Roger Gt

Funny you should mention that, Bill. You see, I took my first driver's
license exam in Jamaica, W.I. where, if you tested in a car equipped
with an automatic transmission, your driving privilidges were limited
to vehicles equipped likewise. It was not really about the
"priviliges," but about safety and all understood this. (Though we ALL
bemoaned the dreaded ramp test.) So yes, I suppose you did "guess"
correctly although the analogy is not quite appropriate to the ARS.

Don't take my word for it. Ask the poor slob who got rear-ended by
that person who borrowed his/her friend's car and, in a panic stop,
mistook the clutch pedal for the brake pedal when the dirver ahead of
him/her stopped short. Actually Bill, I was that poor slob about ten
years ago...so maybe you should take my word for it. I let him slide
though as the damage was minimal with no injuries. Besides, why make
us all pay via increased insurance premiums. Hmm, 1500 Watts on
VHF/UHF...perhaps it wasn't a bad analogy after all?

> The reality is the morse test is past its prime...and the entire body
> of international countries have seen fit to eliminate morse as
> an international treaty element.

The reality is that CW is the second most popular mode in the ARS
today and is a part of the big picture. Let's also not forget that
we're talking about the 5-wpm exam for upgrade within, not for entry
into, the ARS.

> > 2. Made the notion of more privileges via higher achievement appear as if

Second most popular mode in use today...particularly on HF?!

Jim,

Of that 423k US hams who are not Techs, how many do you suppose started
out as Techs and have since upgraded? How many SKs and dropouts would
have reduced the population without the newcomers coming in to replace them.

Maybe 50% is a slight stretch, but I'd guess not by a lot.

>
> Yes, there are almost 260,000 Techs today - but a large number of them are
> actually Tech Pluses whom the FCC renewed as Techs since April 2000.

Out of 10 years of NCTs, only a few years worth would fall into that
category.
I would bet that a LOT of the Tech Pluses that existed in April of 2000 are
now

Generals or Extras, rather than having been renewed as Techs with code credit.

Follow-Up: Went to the bookstore to grab a copy of "Execution" (a business book) and, while I was at it, I went ahead and purchased a "World Almanac 2004." While I was checking out, the sales associate grinned when he scanned the Almanac. Turns out they've been selling like hotcakes!

As an aside, anyone know if ham radio is ever in a almanac? I thought there'd be some stuff on hobbies, but haven't found it yet. Jim, N2EY, would probably make some bucks if he'd write and publish a Almanac of Ham Radio!

>
> Incentive?

Sure. Your proposed two-class system is an incentive system. The
incentives to upgrade are two: more power and the prospect of being
put off the air at the end of 10 years.
>
> You're either qualified for a ham license or you're not qualified.

That's in direct contradiction to your "no renewal" entry level
license idea.

Suppose FCC enacted your proposal as you submitted it. Why would a
person with the entry-level license be qualified for that license for
ten years but then be unqualified for it after ten years? Particularly
if they were willing to retest for the same license?

Whether or not a person is qualified depends in part the privileges
granted by the license. A person could be qualified for a license that
grants some privileges but unqualified for a license that grants all
privileges. Which is the reason for having more than one license class
in the first place.

> This
> incentive notion (and Steve Robeson's 'structured occupancy' notion) are
> liberal ideas whose time has gone.
>
Since the license and test rules restrict individuals far more than
organizations, that would make those notions "conservative".

Does it make any difference at all. The point is that there is
no reason for states to test on manual gearbox
autos because 95% of new vehicles are automatic. Those
that want to will learn to drive a manual without any licensing
intervention needed from the state.

Cheers,
Bill K2UNK

So how many rear-enders have no-coders had while using CW?
The anology is a joke. There is ZERO element of safety involved with
CW knowledge/testing. Had there been any relavent safety
aspect to justify CW testing the FCC would have acknowledged it.

> > > 2. Made the notion of more privileges via higher achievement appear as

So how come a no-code tech isn't banned from using CW
on the only two all-CW only bands. Use does not justify
the requirement since there's nothing detrimental about learning
on the air at even a one word per minute, look it up on a table
rate.

Cheers,
Bill K2UNK

NOT SUR IF I AGRE WID U OM = I CAN QRS IF U WANT 73 BK

Clearly that was not English. Compare to the clear text version:

I'm not sure that I completely agree with you, you young upstart
whipper-snapper. From your comments, you aren't proficient in Morse
Code, Q-signals, or even how to use the "release-to-listen" button, but
I'll use smaller words if that improves your comprehension.

So now, have fun on 11 meters, and back to you.

==

Also, see http://www.hyperdictionary.com/dictionary/continuous+wave

where it says (in part):

Many (especially radio amateurs) continue to understand "CW" to mean
transmission by means a signal of a single frequency which is either on
or off (e.g. Morse code), as opposed to a carrier which varies
continuously in amplitude, frequency or phase. Some would even call the
former "unmodulated" even though turning on and off is actually an
extreme form of amplitude modulation.

HAW! Well, those are two definitions. Here are some more:

In general,

- A "conservative" wants the govt. to control individuals' behavior more than organizations' behavior.

- A "liberal" wants the govt. to control organizations' behavior more than individuals' behavior.

Of course there are exceptions (like gun control).

Exactly. Also there's the interference considerations.
>

Depends on the antenna and conditions. On HF I have heard amazing
signals from QRP stations because of really good antennas. And
really poor signals from QRO stations because of poor antennas.

> In the end, I believe "most"
> hams want to operate legally and will do so.

That's because it's part of the tradition and culture of amateur
radio to do so, not because of large amounts of enforcement. I'm all
for more and better enforcement, but it's clear that those who think
Riley can do it all are mistaken.

> Those that might run
> double their allowed power (say 400 when limited to 200) are

Big difference between 400 vs. 200 hp under the hood, or between 80
MPH and 40 MPH on the highway. But it's only 3 dB on the air. Tough
concept for some...
>

I'm not sure what you're proposing. Do you mean having some parts of a
band allowed 1500 W and others only, say, 150 W, as is done now in the
Novice parts of 80/40/15?

> > >> But the FCC thinks it's a good idea to reward additional

That's one possiblity.

> checked out and signed off as OK by an Extra class ham.

I'm not gonna throw any stones at ya, Bill. But please note how
I was asked to shut up a while back when I pointed out some logical
inconsistencies in the written testing....

The problem with such an "Appliance Class" license is that it cuts
off those who hold it from one of the main reasons for the ARS to
exist

in the USA. (Remember that the "basis and purpose" is an FCC/Part 97
thing
and other countries have different ones, or none at all). Not being
allowed to homebrew, modify or repair one's own gear is simply a bad
idea. It would
encourage new hams to become even more dependent on manufacturers
rather
than their own ingenuity.

Some of the greatest experiences I have had in amateur radio have been
in
taking an idea and some parts and turning them into a working radio
station, then making contacts with that station. Started doing that
sort
of thing as a kid and never got out of the habit. Led me to EE
degrees, a
career and a bunch of other things. Never would have happened if I'd
had
to use only "approved" gear.
and
>
> Allowing "homebrew" via an Extra certification process would
> foster positive relationships and Elmering (IMHO).

Maybe. OTOH, having to get one's projects approved by another ham
slows
down the process enormously and could result in all kinds of trouble.
Add
to that the fact that the current written tests are by no means
adequate
to ensure that all Extras know everything they need to know in order
to
sign off on another's work.

And what problem does such an "Appliance Class" license really solve?
Do we have lots of problems here in the USA with homebrewing hams'
creations mucking up the bands and causing interference? I don't
think so.

Sure - because that HF knowledge is tested in the written for Tech,
and was tested for in the Novice when it was available.

You're welcome.
>
> I wish certain others in this newsgroup had the ability to
> understand that.

But let's be honest about the situation, Bill. There *are* some folks
who
want to further reduce *written* testing. (Not me!) Just look at the
"21st Century" paper for one example - particularly the attitude it
projects.
One of its rallying cries is that we need more new hams at any cost,
and not only is the code test scapegoated as a barrier, but also the
written test. That paper came from a NCVEC committee, too, and you can
bet they will push that agenda.

> > A lot of things we thought impossible have come to pass. Heck, FCC never
> > imagined that cb would get out of their control...
>
> In hindsight, the FCC certainly should have seen it coming.

Of course! But they didn't. They simply could not imagine that what
happened to cb could occur. It was simply not part of their mindset,
even though all of the indications were there.

> The big mistake,
> in my opinion, was the failure of the FCC to take into account the
> basic "plug-n-play aspect of CB, the multitude of sales outlets via Radio
> Shack (Tandy), and the constantly lowering of CB set costs, especially
> once they became all solid state.

All of those things were considered *desirable* by the FCC! The whole
reason
that service was created by FCC was so that Everyman could get on the
air with inexpensive, easy-to-set-up-and-use radios for personal,
short-range communications. Particularly mobile.

And if that's not bad enough, lookit BPL.

The main point of all this is that FCC wasn't and isn't an infallible
bunch that Knows What Is Best For Radio. Let alone what is best for
ham radio.
They're simply the folks in charge, who have the unenviable task of
balancing
all the competing demands, and doing it with limited resources and
under
various forms of pressure.

So it's up to us hams to make our case and set our path, not FCC.

It's a learners permit, NOT a license. If they couldn't/didn't learn enough
in 10 years to pass the examination for a license, then they are obviously
not qualified for a license.

73, de Hans, K0HB

PS: Since it's my proposal, I get to define the terminology. Class "B" is a
learners permit. Class "A" is a license.

Before we go too far in this, I agree that it would be nice to get the
tests expanded.

Now to the rant!.....

So What, Ryan? If you are going to give a test, the answers have to be
somewhere. So what if they are in a book in text form? All that means is
that you read and memorize the book and not a question pool.

Or are you suggesting that the answers to the test questions be in NO
book at all? 8^)

>

I doubt that having quizzes and pre-tests would go over very well for
the VE's! Although there are some classes where this happens, those are
all voluntary.

> I would definitely like to see all three tests (tech, general, extra) go up

> re-test if I had too under this type of test.

What I did was indeed to look up any answers I missed. When I studied
for the General and Extra, I'd take one of the online tests, and for any
question I missed, I would go find out why the right answer was right.
THat was a lot easier than rote memorization, and less tricky, for at
least on the Extra test, the "pick a winner" letter was very often *not*
the letter in the question pool.

And when you get down to it, many of the questions are handled just
fine by a question pool setup. Regulations and bands are one part that
comes to mind.

> In fact, if ham radio is

That would probably be a real disaster! What would they be tested for?
There are Hams that have been licensed for a long time, and are
operating comfortably within what they were tested for a long time ago.
Others keep up very well, but all are doing just fine.

Well, the first thing would be getting back on the air after WW1. Some
might disagree on the particulars, but ARRL had a big part in it. I read
that in "200 Meters and Down".

But remember I said I wonder. Wasn't really claiming anything. 8^)

My XYL refuses to parallel park, as do a number of others. She also doesn't do three point turns. Your logic would eliminate those from the test also. A person CAN drive for years and years, and if they do things a certain way, they don't have to PP or TPT. She can drive 100 percent of the time without it. Of course the odd emergency situation may come up.

Bill, if you don't want a Morse code test, that is fine, but you shouldn't use a flawed argument to support it. 8^)

This is your analogy, Bill, not ours. I don't think the analogy fits, I
think people should be required to test on standard, or at least not be
allowed to drive a standard unless tested for it.

one of two answers:

1. It's a goofed up rule

2. It's a good way to get Tech's to practice Morse code.

Either is probably irrelevant because most tech's that aren't planning
on upgrading probably aren't all that interested in Morse code at all,
and there are plenty of goofed up rules.

In Michigan, you will fail your driving exam if you can't parallel park and
do a 3 point turn. They are mandatory test elements. You can fail one but
not both.

If you truly mean "learner's permit" and that it is not a license, then they really should be supervised each and every time they are on the air. If they are allowed on the air without supervision, then in reality it is a license not a learner's permit regardless of the limitations and whether or not it is renewable.

Or 40, 50, or even 60, years ago. Which makes one wonder why this, and some of the other extended test ideas, are being advocated now. I cannot help but suspect this is another example of the intolerance of newcomers by some existing Hams (and also a way for some to build themselves up by putting others down). Darn few of us knew everything when we started (I still don't). Every single person in this newsgroup, every existing Ham, has made mistakes (even those who started 40, 50, and even 60 years ago). Yet, when a newcomer does the same today, it is not simply inexperience, but instead malicious, or ignorance, or even the ruin of Amateur Radio. Some point to it to show how much better they are than that. And calls for a solution to this pending crisis are shouted from the rooftops. There is no need for proof of a wider problem - a few isolated examples are always enough for the intolerant. And, once ignited, intolerance fuels itself. I truly hope I'm wrong about this, but that suspicion continues to grow.

> So how many rear-enders have no-coders had while using CW?

Oh, I don't know, Billï¿½let's see. Let's ask that fellow who just passed Element 2 and just couldn't wait to get OTA. So he bought a nifty little dual-bander, a "killer" Mirage amp, and pumped a few hundred Watts or VHF or UHF RF into his nice long Yagi (You know, the one marketed as a "Boomer.") pointed toward a distant repeaterï¿½right through the second floor of his neighbor's house. Heck, he mounted it on the mast that formerly hosted a TV antennaï¿½that ought to be good enough, right?

After all, I'm sure that someone who is so bothered at the notion of having to learn and be tested on a skill he deems irrelevant to how he plans on operating, that he joins an "international" movement to remove said offensive taskï¿½would certainly be concerned and cognizant of any harmful RF his equipment might be radiating. Heck, he did pass that 35 multiple-guessï¿½er, I meant choice test that proclaimed him "ready." I am fairly certain though that his mode of choice was not CW. ;-)

> The analogy is a joke.

Actually, I am pretty much joking around with you, Bill. (Lighten up.) HOWEVER, the potential for physical harm is there and somewhere the above scenario may be playing out as you read these wordsï¿½and that's no joke.

> There is ZERO element of safety involved with CW knowledge/testing.

Agreed. It's the mindset I find kinda alarming. Folks that have no problem with putting forth the effort to advance in their endeavors are more likely to exercise that same "work ethic" wrt conscientiously ensuring the safe operation of their station. Conversely, folks that would rather complain about having to put forth some effort (Let's be honest, the effort is rather minimal re. Element 1.) to advance themselves are perceived to be "corner-cutters." (Some might even call themï¿½"slackers.")

BIG BIG DISCLAIMER: I am quite aware that this is not true for all no-code Technicians and/or NCI members, HOWEVER, all it takes is one poor soul getting a cranial soaking from some dunderhead who wants to bombard that repeater to validate the concern. Lest the repeater folks feel offended, there is a club here on LI devoted to simplex operation who support VHF/UHF operation with a tad more than the few hundred Watts mentioned above.

> Had there been any relevant safety
> aspect to justify CW testing the FCC would have acknowledged it.

You slay me, Bill. Is this the same FCC that's ready to administer the BPL suppository to AR? "Who's yer daddy now?!"

Okay, make up a petition to put before the FCC that all HF-privileged radio amateurs demonstrate proficiency with a manual gearbox.

Still on that standard excuse, ey?

Tsk, tsk, tsk...back BEFORE restructuring there were about 200 thousand NO-CODE Technician licenses granted. That was separate from the "Technician-Plus" class then.

You haven't admitted that so many NO-CODE licensees got their license grants in the first 9 years of that class.

You keep waltzing around that, misdirecting into other rationalizations such as "they won't renew" or other statements of invalidity.

The Novice class was dropping in numbers before restructuring and it continues dropping. The League of Misinformed Gentlemen finally acquiesced and stated that the Tech license is the "entry level" class for US ham radio.

Now you keep making the pitiful case of "Tech-plus renewals get made Technicians and thus 'distort' the no-code numbers" and conveniently forget the numbers prior to restructuring.

I guess mighty macho morsemen are into Convenience Amnesia.

It should be obvious, Bill. US ham radio is all about "working
DX on HF with CW."

It is against the law to operate on HF without morsemanship.

Probably the law of physics, even.....! :-)

Yes, make those heathen no-coders sit in the back of the EM
bus! Banish them to VHF and above!

No-coders "don't belong" on HF!

>IMHO, No-Code Int'l. has:
>
>1. Encouraged the idea that it is preferable to lower the requirements

And some olde tyme hammes have been hoisting too many at a bar.

Ah! "Mass petition!" How dare no-coders do that!

Ahem...take a look at the carbon-copy Comments on the FISTS
petition. Would you like to halt "mass petitioning" against CW
testing?

>2. Made the notion of more privileges via higher achievement appear as if
>it's fundamentally wrong. If one wishes to upgrade, then meet the
>requirements necessary to achieve that upgrade. (Not just the requirements

Not all ascribe to the "morse is best" notion, either.

>What will happen? Well, the squeaky wheel gets the oil so I think we can be
>reasonably assured of the elimination of Element 1...at least for Technician
>"+" privies. Personally, I'm prouder to have achieved rather than squeaked.

Well then, it's all about pride in being better than most, isn't it?

In 2003 morsemanship for licensing is an Artificial Standard.

If you want to retitle Part 97 the "Aritificial Radiotelegraphy Servce,"
be my guest.

Incorrect, olde tymer. You "spoke" Morse Jargon with abbreviated
ENGLISH and only one "Q code." The correct translation is:

"Not sure if I agree with you, old man...I can send more slowly
if you want...best regards...break (back to you)."

Sorry, olde tymer, I was on HF 50 1/2 years ago and never, ever
had to use such abbreviations communicating trans-Pacific. Since
then I've been on HF for two other radio services and privately
(not on CB, a few months ago), all without having to use morse
or being required to test for morse in order to operate legally.

>So now, have fun on 11 meters, and back to you.

Stuffit sweetums.

Back to your 1930s Standards and Practices and being the mighty macho morseman.

[nobody can realistically expect you to "shut up," jimmie...:-)]

>The problem with such an "Appliance Class" license is that it cuts
>off those who hold it from one of the main reasons for the ARS to exist

>in the USA. (Remember that the "basis and purpose" is an FCC/Part 97
>thing and other countries have different ones, or none at all). Not being
>*allowed* to homebrew, modify or repair one's own gear is simply a bad
>idea. It would
>*encourage* new hams to become even more dependent on manufacturers
>rather than their own ingenuity.

So, where is the official, certified, withoutadoubtaccurate POLL
on how many of today's hams are appliance operators and how
many use their homebuilts as their main radio?

What's the percentage of appliance operators? 97%? 98%? 99%?

>Some of the greatest experiences I have had in amateur radio have been in
>taking an idea and some parts and turning them into a working radio
>station, then making contacts with that station. Started doing that sort
>of thing as a kid and never got out of the habit. Led me to EE degrees, a
>career and a bunch of other things. Never would have happened if I'd had
>to use only "approved" gear.
>and

A few hundred thousand EEs have made career paths WITHOUT
getting a ham license first. IEEE has a bunch of them in their
membership. Are they in the "never would have happened" category?

>> Allowing "homebrew" via an Extra certification process would
>> foster positive relationships and Elmering (IMHO).
>
>Maybe. OTOH, having to get one's projects approved by another ham slows
>down the process enormously and could result in all kinds of trouble. Add
>to that the fact that the current written tests are by no means adequate
>to ensure that all Extras know everything they need to know in order to
>sign off on another's work.

:-)

Right on...like every Extra is an automatic EE who can "certify" a
piece of work.

Nooo...for too many Extras, a Tx without a morse key attachment
thingy is a FAILED design! Would probably get an automatic
REJECT tag if it had a microphone attached...

>And what problem does such an "Appliance Class" license really solve?
>Do we have lots of problems here in the USA with homebrewing hams'
>creations mucking up the bands and causing interference? I don't
>think so.

What's the percentage of US amateurs operating "appliance rigs?"

Do all hams make their "Southgate Type 7" rigs their main one?

[what IS a "Southgate Type 7?" don't show up on a search...]

>> Yet the "only" difference between technicians not allowed
>> any HF and those allowed on the "novice" segments is a code test...
>> no additional knowledge of HF needed for Tech with code
>> to operate the Novice segments.
>
>Sure - because that HF knowledge is tested in the written for Tech,
>and was tested for in the Novice when it was available.

Nobody can operate on HF without morse code knowledge and
skill. "Everyone knows that."

That's why all the other radio services on HF demand their ops
learn, love, honor, and obey morse code.

Don't they?

>> I wish certain others in this newsgroup had the ability to
>> understand that.
>
>But let's be honest about the situation, Bill. There *are* some folks who
>want to further reduce *written* testing. (Not me!) Just look at the
>"21st Century" paper for one example - particularly the attitude it projects.

Terrible attitude. Clearly not what St. Hiram would have approved
in His day.

Never mind that the NCVEC leaders are 20 WPM code tested
Extras. Never mind that NCI was begun by a 20 WPM code tested
Extra. Everyone MUST demonstrate morse skill in order to operate
on HF. It's the divine law of physics.

>> > A lot of things we thought impossible have come to pass. Heck, FCC never
>> > imagined that cb would get out of their control...
>>
>> In hindsight, the FCC certainly should have seen it coming.

Absolutely. Unlike the olde tyme hammes the FCC is "obviously"
deficient and certainly was in 1958.

Tsk, tsk, tsk...how dare the FCC allow "civilians" on HF without
the morse test? And on an old, underused ham band, too!

Imagine...NO test at all to get a license to operate on HF some
45 years ago!

Terrible, terrible, terrible...!

>Of course! But they didn't. They simply could not imagine that what
>happened to cb could occur. It was simply not part of their mindset,
>even though all of the indications were there.

Well, YOU "knew" it all 45 years ago, didn't you? :-)

>> The big mistake,
>> in my opinion, was the failure of the FCC to take into account the
>> basic "plug-n-play aspect of CB, the multitude of sales outlets via Radio

>> Shack (Tandy), and the constantly lowering of CB set costs, especially
>> once they became all solid state.
>
>All of those things were considered *desirable* by the FCC!

Not in 1958.

But...you "knew" all about that 45 years ago...

Me, I only lived through it as an adult, watched it happen. Since "CB"
(Class D under the original rules) was on HF and I'm not "morse
qualified" by test, I can't possibly judge anything like that... :-)

>The whole reason
>that service was created by FCC was so that Everyman could get on the
>air with inexpensive, easy-to-set-up-and-use radios for personal,
>short-range communications. Particularly mobile.

God forbid that "Everyman" should get on HF without being morse
tested! Sacrilege! Heresy!

>And if that's not bad enough, lookit BPL.

"lookit?" [a kit for a toilet? :-)]

How does BPL get into this? That's a WIRED communications
thing.

>The main point of all this is that FCC wasn't and isn't an infallible
>bunch that Knows What Is Best For Radio. Let alone what is best for
>ham radio.

Only tried and true HF morsemen "Know What Is Best For Radio!"

Don't know morse? Shove them in the back of the EM bus up
on VHF and higher. HF belongs to morsemen!

>They're simply the folks in charge, who have the unenviable task of balancing
>all the competing demands, and doing it with limited resources and under
>various forms of pressure.

In civil radio in the USA, the FCC is THE LAW.

>So it's up to us hams to make our case and set our path, not FCC.

Only tried and true HF Morsemen Know What Is Best For Ham
Radio!

So how come when the Generals "lost" privileges in 1968 they didn't
win that same argument...i.e. you can't take privileges
from me because the new requirements aren't justified
since I already had those privileges via a lower class
license?

Cheers,
Bill K2UNK

Dee that is Steve Oarks from Medina OH he is trolling in ham groups
now when not trolling in rec.radio.cb. Of course he complains a lot
about hams but that is his hypocratic nature. You see how he barged
into this thread and tried to start trouble with n8wwm's call sign.
That is what he is about.

But (IMHO) an occasional "great signal" would never be the only thing
the FCC relied on for a notice of power violations.

> > In the end, I believe "most"

Exactly my point. The FCC would likly focus on 1000W vs 200W,
not the cheater running 400.

> > > >> >What is the technical competency difference between an Extra

Something to think about. Consider the discussion a "green-light"
session. No proposal get's immediately shot down while trying to
draw out as many new ideas/concepts as possible.

> > > >> But the FCC thinks it's a good idea to reward additional

Who wanted to shut you down? We can discuss all we want. I'd
be careful, however, with certain ideas presented officially
to FCC.

> The problem with such an "Appliance Class" license is that it cuts

I'll ask again, what IS the experience in Canada. What "bad" things are
happening or not happening?

> Some of the greatest experiences I have had in amateur radio have been
> in
> taking an idea and some parts and turning them into a working radio

> and

But any "commercial" limitation would only apply to transmitters.
That still leaves receiver circuits, etc to experiment with.
In fact, no one needs any license to build and use their own
homebrew receiver.

> > Allowing "homebrew" via an Extra certification process would
> > foster positive relationships and Elmering (IMHO).
>
> Maybe. OTOH, having to get one's projects approved by another ham
> slows
> down the process enormously and could result in all kinds of trouble.

As above, not ALL projects would need approval. Also,
can you give an idea about "could result in all kinds of trouble.?"

> Add
> to that the fact that the current written tests are by no means
> adequate
> to ensure that all Extras know everything they need to know in order
> to
> sign off on another's work.

You just created Catch 22. Based on your perspective, even Extras
today shouldn't be allowed to homebrew without some additional
"certification" because the current Extra syllabus is inadequate to
ensure the Extra knows enough to homebrew.

> And what problem does such an "Appliance Class" license really solve?
> Do we have lots of problems here in the USA with homebrewing hams'
> creations mucking up the bands and causing interference? I don't
> think so.

I didin't say there was any problem. I merely suggested
another "incentive" that could better be tied to knowledge
at a certain license level.
>

Those that truly want to "further reduce written testing" are but
a handful and, except for W5YI, who you may put in that
category, they don't speak at all for a significant majority of
hams (IMHO, YMMV)

> One of its rallying cries is that we need more new hams at any cost,
> and not only is the code test scapegoated as a barrier, but also the

That's why I am in ARRL and have been so since before NCI was
even created. I'll restate my position on the purpose of NCI as it
relates to me. Once the code testing is actually gone, then I'll
cease to be an NCI member as the goal will have been achieved.
If any of the other NCI directors/members want NCI to
continue on a different, expanded purpose, they will do so
without me.

Cheers,
Bill K2UNK

Hey Dee D. you see how he operates he is a troll and not only that he is an illegal freebander and HF bootlegger. Ask him about his Collins S-Line he operates without a license and why it is set up to transmit all over the spectrum he will go quiet real fast.

Apparently the state DOES see a continuing need for PP or TPT...
but does NOT see any public purpose, safety issue, or licensing
ommision by not testing for manual gearboxes.

> Bill, if you don't want a Morse code test, that is fine, but you
> shouldn't use a flawed argument to support it. 8^)

The point is that there is ZERO harm if a new ham never
passes a code test and then decides to get on the air and
jump into a code QSO to learn while doing.

The state apparently thinks the same is true for
manual gearbox driving and many other aspects of driving
which aren't tested at all. I can and do drive an extended cab PU-truck
pulling a 5000 lb trailer, combined length about 40 feet.

To the best of my knowledge, no state
tests anyone for that combination of skills.
All that is needed is a regular driver's license.

Cheers,
Bill K2UNK

Which standard, should there be separate licenses for 3 speed column,
4 speed, 5 speed, 6 speed, which shift pattern?

Apparently there is insufficient state
concern to worry about passing a license test with automatic and
then getting behind the wheel of a manual gearbox vehicle. It's
been that way for decades now with no ill results.

Why wouldn't it be a good way to get anone on HF to
practice also if there's no code test at all? That's
the point, there is no rational justification for a CW
mode skill test. The FCC has addressed and dismissed
every known pro-code argument...as has the ITU also
since Code is gone now as a mandatory treaty requirment.

> Either is probably irrelevant because most tech's that aren't planning
> on upgrading probably aren't all that interested in Morse code at all,
> and there are plenty of goofed up rules.

ITU treaty is goofed up too?

Cheers,
Bill K2UNK

So I would like to take this latest exchange by requesting the good people of rec.radio.amateur.policy, rec.radio.amateur.misc groups delete rec.radio.shortwave, rec.radio.cb from the newsgroup line since this thread is off topic in these groups.

Thanks in advance for your cooperation.

What about that BPL thing, I know their using it in Manasass, anyone
hear how good or bad it is to HF comms?

Updates?

And none of this would have happened if only he had known
code? Give me a break.

Answer the question asked...The question is, for those that need
clarity: IF someone became a General or Extra with NO
code skills, and then decided to learn code on-the-air, what's
the harm, danger, etc?

> After all, I'm sure that someone who is so bothered at the notion of

The potential for harm, physical or otherwise is NOT tied
to anyone's knowledge of code. THAT is the point.

> > There is ZERO element of safety involved with CW knowledge/testing.
>

> would rather complain about having to put forth some effort (Let's be
> honest, the effort is rather minimal re. Element 1.) to advance

> themselves are perceived to be "corner-cutters." (Some might even call
> them."slackers.")

The "effort" has nothing to do with code testing. The goal
of ending code testing is based solely on the lack of
any continued need for code skills to be mandated for
any HF access. There was, in the past, a rational reason
or set of reasons for code knowledge. Those days are gone.
It is that simple.

> BIG BIG DISCLAIMER: I am quite aware that this is not true for all

> Watts mentioned above.

Again, this dialog isn't about the validity or not of
current writtens. My point(s) here are focused only on
code testing. PERIOD!

> > Had there been any relevant safety
> > aspect to justify CW testing the FCC would have acknowledged it.
>
> You slay me, Bill. Is this the same FCC that's ready to administer the
> BPL suppository to AR? "Who's yer daddy now?!"

Sorry to burst your bubble, but its the only
FCC we have. Indeed, had the FCC seriously
errored in their past decion(s) regarding need
or non-need for code skills testing, then I'm
amazed you and others haven't filed court action to
stop the FCC.

If new ham goes OnTheAir to learn code, does that trouble you?
What part of amateur spectrum is considered highway vs
non-highway?

Cheers,
Bill K2UNK

You see Dee D. how Steveo gets violent he has a real problem with anger first thing you know he is threatening to beat someone LOL. But the part about his bootleg Collins HF station is true he brags about it many times on rec.radio.cb ask him you know you hear about these pirating radio spectrum outlaws in the FCC reports but I bet you never met one well here he is his name is Steve Parks.

>CW. ;-)

Of course...a no-coder is lazy, slothful, ignorant, has no common
sense let alone intelligence.

On the other hand, coders are superior in all ways, not just in radio.

>> The analogy is a joke.
>
>Actually, I am pretty much joking around with you, Bill. (Lighten up.)
>HOWEVER, the potential for physical harm is there and somewhere the
>above scenario may be playing out as you read these words…and that's
>no joke.

I sense a lot of bigotry and intolerance in what you've tried to write.

If you want to proclaim yourself "superior," then I'd suggest you
halt the coders-are-the-top-of-the-food-chain attitude.

There is NO evidence that morsemanship ever imbued another
with intelligence, common sense, or any other qualities other than
to send on-off keying on an acceptible level.

>> There is ZERO element of safety involved with CW knowledge/testing.

>honest, the effort is rather minimal re. Element 1.) to advance
>themselves are perceived to be "corner-cutters." (Some might even call
>them…"slackers.")

Total bigotry and intolerance...plus the arrogance of "I had to do it so
all you others damn well have to do it."

That's very tiresome as well as totally invalid.

>BIG BIG DISCLAIMER: I am quite aware that this is not true for all
>no-code Technicians and/or NCI members, HOWEVER, all it takes is one

Of course there is...and you have dutifully reported that same
organization to the FCC, right?

>> Had there been any relevant safety
>> aspect to justify CW testing the FCC would have acknowledged it.
>
>You slay me, Bill. Is this the same FCC that's ready to administer the
>BPL suppository to AR? "Who's yer daddy now?!"

How did BPL suddenly become a part of NCI?

The FCC still has a NOI, a Notice of Inquiry, ABOUT BPL...it isn't
advocating it or "threatening" an NPRM.

There are over 5000 documents in the FCC ECFS database just on
03-104. I'd suggest you begin at the beginning and educate
yourself on what it is really about.

The question kind of states it. I suppose that the BW might be wider as the speed increases.

The reason I ask is that on 3580 tonight, we're all sitting there fat, dumb, and happy, when W1AW starts it's CW broadcast. And it's some 700 kHz wide!!! And now I'd swear it's almost 3kHz wide. That's like SSB!!!

Needless to say, their strong signal was pretty tough on all us 5 and ten watters. you could get most of a message through, but it took a lt of the fun out of it.

What the heck , over?

....seems some of the restaurants felt they had to remind some patrons
of that, specifically over the weekend of the Dayton Hamvention.

(I wonder why...? grin :)

I guess they wanted to avoid an argument from some 'groups'
or 'seasonal itinerant patrons' who might have thought they
were getting scammed on their bill or something else. :)

I *also noted* VERY amusingly, that the motel across the street from
us had posted a 15" by 15" sign in their office window, reminding
his 'patrons' for Hamvention weekend, that there was a *strict
maximum limit of two adults occupancy to each single and
four adults to each double room*. (I guess the indian owner
got tired of seeing 8 or 12 stinky overweight middle-aged
white men, leaving a 20 by 20 foot motel room carrying sleeping
bags and leaving a mess like modern-day gypsy traders
whilst only 4 were actual paying patrons...)

:) :)

>
>It's a learners permit, NOT a license.

What's the difference?

Here in PA, a person with a learner's permit for driving cannot drive alone. Could your learner's permit hams operate their own rigs all by themselves? If so, it's a license.

>If they couldn't/didn't learn enough
>in 10 years to pass the examination for a license, then they are obviously
>not qualified for a license.

But they're qualified to have a learner's permit for 10 years.

This is a major problem with a one-shot "permit", Hans. Sooner or later (probably sooner), someone will ask why a ham with a B license is qualified one day and not qualified the next - even if said ham is willing and able to pass the test again.

Can you name any other license where, if you don't upgrade within a specified time, you lose the license you have?

73, de Hans, K0HB
>
>PS: Since it's my proposal, I get to define the terminology. Class "B" is a
>learners permit. Class "A" is a license.

It's not me you have to convince, it's FCC. FCC has always called them licenses.

And no matter what they're called, it's a two-class system.

>
>Jim,
>
>Of that 423k US hams who are not Techs, how many do you suppose started
>out as Techs and have since upgraded?

I don't know, exactly. Neither do you, I bet ;-)

But why does it matter?

You are assuming that if the Tech still had a code test, none of those hams who
got Techs would have gotten a ham license. That's not a reasonable assumption
at all.

From 1979 to 1991, the number of US hams grew from about 350,000 to about
550,000 - all of them code-tested. From 1991 to 2003, the number grew from
about 550,000 to about 683,000. (If someone has more accurate numbers, please
post them!). We had growth with code tests and growth without code tests.

Back in 1991 there were about 550,000 US hams, all of them code-tested. By
April of 2000 there were about 675,000 US hams, of which about 205,000 were

Techs. Since then the renewal of Tech Pluses as Techs clouds the issue.

>How many SKs and dropouts would
>have reduced the population without the newcomers coming in to replace them.

Depends on the dropout rate. The important thing is you *assume* that we wouldn't have any newcomers if they all had to pass code tests. That's simply not a reasonable assumption.

>Maybe 50% is a slight stretch, but I'd guess not by a lot.

I'd say an awful lot. Look up how many new hams we got per year in the '80s compared to the '90s.
>
>> Yes, there are almost 260,000 Techs today - but a large number of them are
>> actually Tech Pluses whom the FCC renewed as Techs since April 2000.
>
>Out of 10 years of NCTs, only a few years worth would fall into that
>category.

The Tech hasn't had a code test for almost 13 years.

FCC has been renewing Tech Pluses as Techs for 3 years, 8 months and 18 days. If no rules changes are made, there will not be any Tech Pluses at all in 6 years, 3 months and 13 days from now.

>I would bet that a LOT of the Tech Pluses that existed in April of 2000 are
>now
>Generals or Extras, rather than having been renewed as Techs with code
>credit.

How many is "a lot"? The number of Tech Pluses has dropped by about half since April 2000. Some of that drop is due to upgrades. Some of it is due to dropouts. And some of it is due to renewal as Techs.

To say that we'd only have 340,000 hams today if all hams were code-tested is simply not reasonable.

Here are some numbers:

In order to grow from 350K to 550K in 12 years, the number of newcomers would have to be at least 17,000 per year, even if there were no dropouts at all.

Now let's suppose that the changes of 1991 never happened, and that we were still getting only 17,000 new hams per year. And suppose that the dropout rate of those 1991 hams from then to the present was 2.5% per year .(average ham "career" of 40 years).

Then in the 12 years, we'd have lost about 26% of those who were hams in 1991. That's a loss of 143,000 hams, bringing the total down to 407,000. We'd have gained 204,000 new hams, bringing the total up to 611,000.

That's a long way from 340,000.

>
>Prove it. Prove it without circumstantial or coincidental evidence.
>
Simple.

After WW1, it was the ARRL that sent people to Washington to get the wartime ban on amateur radio lifted. This ban included both receiving and transmitting, btw. There were several parties, including the Navy Dept., that wanted amateur radio to simply not resume after WW1.

In the 1920s there were several international radio conferences, mostly in Paris. It was at these conferences that amateur radio was established as an internationally-recognized radio service. ARRL sent representatives to all of these conferences. There was serious opposition from several countries to the very existence of amateur radio, and were it not for ARRL representation, amateur radio would not have gotten past 1925 or so.

There are plenty of other examples.

Now some might argue that if ARRL hadn't done the job, someone else would have done it. But the historical fact is that nobody else did.

But enough ancient history. Look at the BPL situation - who is leading the fight? ARRL, once more.

Funny you should mention it. Anyone holding an amateur radio license
finished first. You, on the other hand, are in second place.

Perhaps, since you're only second best, you should try harder.

Hey stupid. The thread is about "Why I hate ARRL". This concerns HAM
RADIO. Ham radio operators operate on shortwave. Glad to have you
correct my spelling anytime oh great one. Anonymous? Naw. I have a
valid email address listed in each and every header. Anyway, if you
check out the thread you will find it does not concern you.

Hey LHA. Are you even a ham? did you pass your HAM test in front of a FCC examiner? Are you a 'NO CODE TECH'? You are correct, no coders do NOT belong on HF. They do belong somewhere though. Maybe using kids walkie talkies. Can't get into too much trouble there. Just check out 2 meters now. Not one put 50 ever passed a real FCC test at a FCC office. Most used the VEC program. Just slip uncle Homer 20 bucks and receive your Tech ticket in 4 weeks.

There's a more poignant question that it reveals on the surface. Why *does* it matter how many licensed amateurs upgrade at any given point--and what determines whether they do or not? Anyone truly interested in the growth of the ARS needs to know those answers for effective marketing, esepecially if the concern is driven from a desire to see the ARS grow, rather than maintain numbers.

For me, personally, I am happy with my Tech License and see no reason to upgrade "just for the hell of it." The "just for the hell of it" idea has never been a motivational factor for me in anything--personal, hobby, or professional. So, what marketing campaign would: #1 *reach* me and, #2 motivate me to change my mind?

The ARRL has never reached me yet (can't speak for others) on a campaign to motivate me to upgrade. The only thing the ARRL apparently successfully *helps* with (but is not solely responsible for) is getting *new* hams involved. If that statement is true--and it's probably more true than not--then what does the ARRL need to do to move past just getting new folks to the hobby/service of amateur radio? I suspect it has *nothing* to do with license class or even requirements. When I decided to become a licensed amateur radio operator I gave no thought at all to what it would take to get my license; only that I needed to meet the requirements at hand. It was only *after* I entered the service that any conginitive thought was made as to license upgrades for the purpose of more bandwidth, privileges, etc.

>
> You are assuming that if the Tech still had a code test, none of those
hams who
> got Techs would have gotten a ham license. That's not a reasonable

assumption
> at all.
>

I agree with that. Based on what I said above. At the moment I considered the hobby/service of ham radio, I gave no thought to the idea that maybe the requirements would change. Well, in fact, I gave no thought at all to the requirements--other than that I had to meet them to achieve my ambition of getting a license. I think there would be a preponderance of folks who aren't even going to be that aware of requirements and necessity at the time they are considering entering the ARS.

If this thread is indeed still discussing the ARRL(?)--the ARRL itself needs to consider these questions--probably needs to poll current hams and get a professional marketing agency to figure out how to move beyond just being a welcome mat and deciding if they also need to take on the task of getting people to migrate to higher license classes or what those higher license classes "get" you (because there may not always take a higher license classes along with the privileges of the "extra" bandwidth, etc.).

>
> From 1979 to 1991, the number of US hams grew from about 350,000 to about
> 550,000 - all of them code-tested. From 1991 to 2003, the number grew from
> about 550,000 to about 683,000. (If someone has more accurate numbers,
please
> post them!). We had growth with code tests and growth without code tests.
>

It's those fluctuations in the numbers that need to be analyzed. What was going on economically, politically, educationally, even migrationally, in this country at those times? 200,000 vs. 133,000 in growth in two entirely different phases of years, but the same number of years. And, Jim, I know ('least I think I know) you will agree that CW testing or not may have nothing at all to do with the fact whether there was more or less growth at either time. It could have nothing *at all* to do with testing structure because, as I said, I didn't really take enough time to say, "wait a minute, what are the requirements and will they ever change?," etc.

>
> Back in 1991 there were about 550,000 US hams, all of them code-tested. By

were
> Techs. Since then the renewal of Tech Pluses as Techs clouds the issue.
>
> >How many SKs and dropouts would
> >have reduced the population without the newcomers coming in to replace
them.
>

Now, there's a question that would be really hard to get answered, but it could be done. However, based on this discussion alone (the appearance of growth being influenced only by whether there is a CW test or not); I think

there are more people driven by their ambition that driven by requirements. I think if I *want* to upgrade, I am going to do it regardless of test requirements. Really. Yes, there are some that are driven more by the requirements--but I don't think it would end up being revealed that they are in a majority at all. Test requirements are not a stifler or an encouragement--either way.

>
> Depends on the dropout rate. The important thing is you *assume* that we
> wouldn't have any newcomers if they all had to pass code tests. That's simply
> not a reasonable assumption.
>

As much as I, being on the side of eliminating a CW (or any other mode) requirement, would like to jump on that bandwagon, I think it's a mistake to do so and get any real positive results out of it. However, the sum of all the avenues of non-CW testing folks is probably the only way there will ever be enough support to end CW testing <grin>.

>

Is that a good comparison? The Tech may not have...but what about the Tech+ who, incidentally, has HF privileges and was that the motivating factor or did they just want a higher class of license. How many Generals and Extras are out there that upgraded (with or without CW) and don't ever really *use* their privileges. Remember that the ARRL's interest would also be in having enough numbers of hams to drive their "use them or lose them" campaigns (boring as they may be). This, by the way, is also why I believe the ARRL is not the successful agency it would like to believe it is. It is very apparent that the ARRL has failed to move past being a welcome mat.

>
> FCC has been renewing Tech Pluses as Techs for 3 years, 8 months and 18 days.

> years, 3 months and 13 days from now.
>

Hmmmm, but I will still have the same privileges as I do as a Tech+. So, for someone who cares, where's the downside of that? I don't care if I'm called a Tech or a Tech+--that concept is only important to some but not all hams--but I do care whether I can get on the radio or not. And the radio I care to get on is a FM transceiver using 2M predominantly (if at all because, heck, I haven't been on the radio in over a year).

I agree, Jim. And, if NCI *and* the ARRL are ever going to change, or even understand, fluctuations in the numbers and in the numbers of license classes way more study and analysis needs to be done. Some, in fact, would be better than none.

I'm not talking about "knowing" the code, Bill. Very few people
actually "know" the code from preparing for and passing Element 1. I'm
addressing the self-discipline required to accept the challenge and
meet the requirements to upgrade one's privileges rather than complain
about how one never plans on using it. I'm not much into the newer
digital modes nor am I particularly interested in Satellite assisted
communications, however, if the path to upgrading my license/privies
leads through some learning and testing re. said subjectsï¿½no problem.
(Psst, it's a character issue.)

> Answer the question asked...The question is, for those that need
> clarity: IF someone became a General or Extra with NO
> code skills, and then decided to learn code on-the-air, what's
> the harm, danger, etc?

None. But I suspect you are deliberately missing my point. The code
skills themselves are irrelevant. You could substitute any actual
challenging aspect of upgrading one's ticket in it's place and the
same folks would likely bemoan it. In this "I want it now" culture,
many don't want to have to actually put forth much effort to earn
their ticket. I'd be all for dropping Element 1 altogether AND doing
away with the published Q&A pools. How about just a study guide? Oh
yeah, let's make Element 2 50 questions while we're at it.

> > After all, I'm sure that someone who is so bothered at the notion of

Sorry, Bill. That may be the point you'd like to key on, (No pun intended) but that's not the point I'm stressing. I agree 100% with the sentence above. It's the slacker-mentality (Sorry, time to shoot from the hip.) that I deplore. If we really want to get young folks involved in AR, this is not a principle I'd like to see them learn. If you complain enough, the bar will be lowered for you. As a youth, the concept of achievement (As well as a well-rounded education.) was constantly stressed and I thank God I had folks (Parents, teachers, guidance counselors, etc.) that cared enough to strongly encourage us to achieve rather complain. I feel so sorry for the kids that are recently got that curve on their Regents exam rather than enroll in a summer program to increase their knowledge to the appropriate level. Some will perform poorly in college and if enough of them complain that their college curriculum is unfairly difficult, perhaps that bar will be lowered as well. Interestingly enough, I now tend to seek out those Elmers who will push me to become a better operator. IMHO, they have my best interests at heart.

> to be mandated for any HF access.

I disagree, I truly believe that it's almost all about the required effort. Again, drop those published Q&A pools and watch the squirming commence. Folks just don't want to be made to have to sit down for 20 mins., twice daily, for a month or two and memorize 43 Morse code

characters.

> There was, in the past, a rational reason
> or set of reasons for code knowledge. Those days are gone.
> It is that simple.

There still is. It's the second most popular mode in use in the ARS
today.

> > BIG BIG DISCLAIMER: I am quite aware that this is not true for all

> current writtens. My point(s) here are focused only on
> code testing. PERIOD!

Again, my dialogue is addressing the character issue involved re.
squeaking vs. achieving. Do you really want to focus on the code test,
Bill. Quite frankly, Element 1 is NOT much of a code test to focus on
and very rarely leaves anybody with any level of OTA proficiency. So
you see, it's not the actual code knowledge or lack thereof that makes
for the dangerous scenarioï¿½it's the associated mentality of those
who'd rather squeak than achieve that can possibly lead to harm.

> > > Had there been any relevant safety

> stop the FCC.

Quite frankly, Billï¿½I'm no big fan of the FCC. You are, however,
correctï¿½they're the only game in town. Do I think they make mistakes?
Sure, but I'm not sufficiently motivated to file a court action
against them. A few letters to my elected representatives and some
recreational debate on R.R.A.P suffices.

Trust me, my bubble is very much intact. I came into AR approx. three
years ago pretty much oblivious to the code vs. no-code debate. All I
knew was that I wanted to be an ARO and operate HF. Like I've said
before, remove the whing and passion from both sides of the debate and

the obvious remains like a purple elephant in the living room.

>
> If new ham goes OnTheAir to learn code, does that trouble you?

Not at all. I consider myself a relatively new ham and I continue to
increase my code proficiency OTA. After all, the license is really
just a ticket to learn.

> What part of amateur spectrum is considered highway vs
> non-highway?

Thanks for makin' it easy, Bill. How about the CW only portion of
2-meters? I think that sounds like a groovy place to practice some
seriously slow code with a code-buddy. Then, if I like it, perhaps I'd
pass Element 1 and hop on the Novice/Tech "+" sub-bands to increase my
proficiency. Thos are some examples of "rural routes."

The highway, hmmï¿½ Would you really encourage a brand newbie to hop on
7026 kHz and mix it up w/the 35-wpm+ crowd, Bill? Think they'd feel
encouraged? I've had a couple of ops QRS from 20-wpm down to 19-wpm
for me and lemme tell ya, it wasn't fun. Conversely, I have had guys
switch to some really nice Farnsworth style 25-wpm character speed
spaced apart to about 8-wpm and an hour and a half ragchew QSO just
breezed on by with very little effort or tension.

> Cheers,
> Bill K2UNK

Cheers indeed. :-)

Mike,

The bandwidth of a Morse signal is determined by the rise and fall times of the leading and trailing edges of each dit or dah, and the shape of the rise and fall.

>
>The reason I ask is that on 3580 tonight, we're all sitting there fat,

Yep. Such a bandwidth would require extremely "hard" keying, though. Or a modulated carrier.

Mike, I believe the bandwidth actually decreases as the speed increases.

Mike,

Sounds to me like you were experiencing front end overload in your receiver ... when the signal exceeds the dynamic range of your receiver, all sorts of things happen and the signal can appear to be MUCH wider than it actually is.

To verify this, turn off the preamp (if you have one), and switch in about 20 dB of attenuation before the front end of the receiver and see if it all gets better ...

73,
Carl - wk3c

Translation, I did it, so should everyone else.
Using your philosophy, the FCC should never change requirements...
even when a specific requirement no longer has justification.

> I'm not much into the newer
> digital modes nor am I particularly interested in Satellite assisted
> communications, however, if the path to upgrading my license/privies
> leads through some learning and testing re. said subjects.no problem.
> (Psst, it's a character issue.)

No problem there and I don't oppose "knowledge" questions
about CW the mode. The issue is the stand alone skill test
for morse which is a separate pass fail element. NO other
mode is set on that pedestal.

> > Answer the question asked...The question is, for those that need

> involved in AR, this is not a principle I'd like to see them learn.

You'd rather we continue mandating a skill test for a mode that
is all but totally gone from the world of radio communications
except within amateur use? Again, per my comment above,
NO other mode has its own unique test. That's the point.

> If
> you complain enough, the bar will be lowered for you. As a youth, the

> those Elmers who will push me to become a better operator. IMHO, they
> have my best interests at heart.

My my, I guess the end of all amateur upgrading
and new learning will be tied to the end of code
testing. You must have really been disappointed when
states stopped testing drivers on manual gearboxes.
For me it was no problem. When my kids wanted
to drive they learned or they had no car to drive as
all our vehicles had been standard shift. Those that
want to learn will. Trying to claim some great
philosophical tie of ending code testing being
the start of an end to new/old hams continuing to
learn is just bunk.

> > > > There is ZERO element of safety involved with CW knowledge/testing.

> effort.

So let me get this straight. You wantis some undefined,
unmeasurable amount of effort that the FCC should be
trying to have in place for any license level?

> Again, drop those published Q&A pools and watch the squirming
> commence.

It will never happen and I don't care if it did. The old
ARRL and AMECO learners guides were just as easy to
memorize sufficiently to pass. I did the General test in
the late 50s exactly that way.

> Folks just don't want to be made to have to sit down for 20
> mins., twice daily, for a month or two and memorize 43 Morse code
> characters.

Irrelavent. The point is NOT the effort, and the FCC has
already chimed in on the. The test must exist or go based
on a clear and understood need for the knowledge. EFFORT
is not now and never has been recognized as a valid test requirement
determinator.

> > There was, in the past, a rational reason
> > or set of reasons for code knowledge. Those days are gone.
> > It is that simple.
>
> There still is. It's the second most popular mode in use in the ARS
> today.

Yet that failed to convince the FCC and, more
recently the ITU. The point is that those bodies
recognize that no one needs to know morse just to be
issued a license. Those that wish to engage in
morse contacts are free to learn morse and use it.
The issue is solely the test requirement and has no
link to actual morse use by anyone.

> > > BIG BIG DISCLAIMER: I am quite aware that this is not true for all

That's just the old tripe argument that has convinced no one.
The rony of your claim is that most of us that are the
nucleus of NCI activity had already done the morse
test at 5, 13 and/or 20 wpm. Nothing to gain now
if code testing goes altogether.

> Do you really want to focus on the code test,

The FCC removed the winning/passion when they issued the R&O
for 98-143. If you haven't read that yet, I suggest you do.

> just a ticket to learn.

Exactly. So then why the need for code skill testing...oh,
I remember, the FCC must impose a mystical quantity
of effort for all ham licensing.

> > What part of amateur spectrum is considered highway vs
> > non-highway?
>

> encouraged?

IF they did so, so what? They'd either make a QSO or not.
Nothing ventured, nothing gained. If they felt out of
place they'd shift to calmer waters.

> I've had a couple of ops QRS from 20-wpm down to 19-wpm
> for me and lemme tell ya, it wasn't fun. Conversely, I have had guys

> breezed on by with very little effort or tension.

To each his own. What ever floats your boat. I see no problem
with newbie hams doing morse at slow speeds anywhere morse
is allowed as long as they do so within the rules.

Cheers,
Bill K2UNK

180. Re: How wide is a Moirse CW pulse?

From the ARRL License Manual 1976:
CW Bandwidth = wpm X 4 (e.g., 40 WPM = 160 Hz)
"With proper shaping, the necessary keying bandwidth is equal to 4
times the speed in words per minute for International Morse Code;
e.g. at 25 words per minute, the bandwidth is approximately 100 cycles."

From the ARRL License Manual 1976:
CW Bandwidth = wpm X 4 (e.g., 40 WPM = 160 Hz)
"With proper shaping, the necessary keying bandwidth is equal to 4
times the speed in words per minute for International Morse Code;
e.g. at 25 words per minute, the bandwidth is approximately 100 cycles."

Also -- suspect your receiver bandwidth and dynamic range -- try some
attenuation and reduce RF gain or Kenwoods AIP -- helps with strong adjacent
signals.

Nor can we expect you, Leonard H. Andserson, to heed your own
advice, ie not using belittling endearments when addressing others.

Scumbags rarely do. And you ARE a scumbag.

> A few hundred thousand EEs have made career paths WITHOUT
> getting a ham license first. IEEE has a bunch of them in their
> membership. Are they in the "never would have happened" category?

And a few hundred thousand HAVE....

Your point?

> >Sure - because that HF knowledge is tested in the written for Tech,
> >and was tested for in the Novice when it was available.
>
> Nobody can operate on HF without morse code knowledge and
> skill. "Everyone knows that."

I'd ask you to please cite where "morse code knowledge" was
mentioned, but I hate to rub your nose in little details...

> That's why all the other radio services on HF demand their ops
> learn, love, honor, and obey morse code.

NONE of the other "radio services on HF" have the same Basis and
Purpose as the Amateur Service.

> Don't they?

No, but then "other radio services" are not the Amateur Radio
Service.

> Absolutely. Unlike the olde tyme hammes the FCC is "obviously"
> deficient and certainly was in 1958.

It was in regards to placing what was supposed to be a "low
power, short range personal communications service" on to an HF

allocation known to propagate globally...And THEN tell the licensees
to not take advantage of it.

> Tsk, tsk, tsk...how dare the FCC allow "civilians" on HF without
> the morse test? And on an old, underused ham band, too!

That's not the point, but then you know that.

Lennie's trolling, trolling, trolling...

> >The whole reason
> >that service was created by FCC was so that Everyman could get on the
> >air with inexpensive, easy-to-set-up-and-use radios for personal,
> >short-range communications. Particularly mobile.
>
> God forbid that "Everyman" should get on HF without being morse
> tested! Sacrilege! Heresy!

It wasn't about being "on HF", Your Scumminess...

It was about a SHORT RANGE radio service. The FCC screwed up.
The Amateur Service lost out, the FCC made fools of themselves, and
the intended market for the service lost out since that "service" is
completely useless for the intended application.

> >And if that's not bad enough, lookit BPL.
>
> "lookit?" [a kit for a toilet? :-)]
>
> How does BPL get into this? That's a WIRED communications
> thing.

A "WIRED" communications service that has the potential to create
havoc to ALL high frequency spectrum users...code or no code.

> >The main point of all this is that FCC wasn't and isn't an infallible

> achieved after a person has achieved their first license in a
> one-license system. That the Basis and Purpose can only be achieved
> in a multiple-license system.

A "one license" system does not promote learning.

A "one license" system promotes stagnation and mediocrity. Look
what a "classless" society did to Central Europe for 70+ years.

As deftly pointed out by Jim, N2EY, the TRUE stagnation of the
Amateur Radio Service occured BEFORE Incentive Licensing.

Was the way the FCC implemented it wrong? Sure it was. But the
system worked.

> I asked if self-learning occurs after the Extra license is achieved.

Sure it does. And there are some cases where the licensee brings
his "self-learning" with him/her from an engineering
point-of-view...but thsoe folks are few and far between.

> Give me a rational answer why it cannot occur after someone achieves a
> license in a one-license system.

Can it occur? Sure it can. Does it usually or routinely occur?
Nope.

Now, here's one for YOU, Brain...cite for me some grand example
of "one size fits all and promotes learning" example from ANY aspect
of our society...One that can't be refuted at some level.

I'll be waiting, but I won't be holding my breath.

Steve, K4YZ

>level license that is geared toward an average 6th grader.

I got my Novice license at the start of 7th grade. I could have passed the test
a year or two earlier if I'd known about ARRL publications earlier. So even the
old entry-level requirements weren't that tough.

There are hams of all license classes who passed their license exams well
before the 6th grade. And anyone familiar with the curriculum in a decent
school district knows that there's nothing in any current ham exam that's
beyond the capabilities of a typical 6th grader IF said 6th grader wants to
learn the stuff.

The "21st Century" folks want entry level hams limited to rigs that use no more
than 30 volts.

Even more amazing, they suggest taking much of the *regulations* out of the
test, and simply requiring a signed statement....

I'm not sure which group you're posting from Steve, so I didn't trim the groups. Once I know, I'll trim 'em out. cb and shortwave don't need all this stuff (though shortwave listeners should be VERY concerned about BPL.

Steveo wrote:

FEMA has expressed "grave concerns"

DERA has noted:

"DERA concludes that serious interference to and disruption of critical emergency communications systems in several licensed services throughout North America would almost certainly result from BPL implementation as currently proposed," DERA's comments said. Endorsing FEMA's earlier remarks, DERA said proposed BPL systems don't just pose a risk of interference, they've already been shown to "actually cause harmful interference to licensed radio services."

AMRAD has provided data that suggests that a Operating Ham within a half mile radius will likely knock out BPL. The service is simply too susceptable to interference.

from ARRL site:
AMRAD found that at a distance of just over one-half mile, data transfer ceased in the face of a 100-W signal on 3980 kHz from a mobile transmitter. Adjacent to the test property, AMRAD said data transfer ceased in all but one instance at a transmitter power of just 4 W in the BPL operating band of from 4 to 21 MHz.

back to me:

So BPL is a big source of interference to devices it isn't allowed to interfere with, and it looks like a QRP or CB rig with a good antenna

can knock it out, but certainly a 100 watt rig will take BPL internet out.

As I figured, the BPL internet access concept is going down fast.

Part of the equation here is the receiver, as Jim N2EY was bringing up. A
lot of folks don't understand that actual bandwidth and apparant bandwith as
determined by a receiver are not the same in most cases.

Also I really don't see the problem, why did you just sit there? Were you all rock bound or what?

Move frequency, were not channelized, yet.

Sure it is. The whole situation is hypothetical, and yes, the hobby would be different, especially if it started up again today after a long long absence.

Okay, I give up. This was an attempt to get people to use their imaginations, but other than Hans, no one want to play.

Let's get back to debating Morse code!! 8^)

A test of BPL was run in Alabama. A engineer friend of mine told me it was not coming up to what was advertised in Birmingham. Repeaters were needed way too often, thus jacking up the expense.

Unless the FCC is totally braindead I think BPL, as proposed will die by itself. However what they want is INCREASE the power of BPL over and above what is presently allowed under part 15.

They may take that route. We shall see.

Agreed! But FCC doesn't see it that way - yet.

Bill, your argument simply points down the path of getting rid of the Extra, even if you don't intend it that way.

Just a number of Hams using PSK31. I was only monitoring, so I didn't
keep track of callsigns.

>>And it's some 700
>>kHz wide!!!
>
>
> How did you determine the bandwidth?

On the waterfall display, you can look at the BW pretty directly. A good
psk31 signal doesn't take up a whole lot of space, maybe 40 hz.

This CW signal had spikes on the end that extended almost 400 hz on
each side. It ripped into the PSK signal and wiped it out. When it got
really bad, everyone just gave up.

>>And now I'd swear it's almost 3kHz wide. That's like SSB!!!
>
>
> Yep. Such a bandwidth would require extremely "hard" keying, though. Or a

>>of the fun out of it.
>
>
> Was the AGC on?

Both on and off. I often have to turn it off when a strong signal desenses the reciever and I'm working a weak station.

Your modulated carrier thing may just be a big clue. When the signal ended up putting spikes over the whole section of the band, I removed the connection to the computer to listen to the signal. It sounded pretty strange. I'll have to check what the signal again to see what it sounds like on ssb or even AM.

But in these K1MAN days, it would be a good idea for ARRL to keep a good clean signal, and not do the eqivelant of K1MAN - that is to just start the transmission and stomp all over everyone else nearby.

Kinda of gives a bit of argument:

Why tip for expected average service?

Tips are a reward for exceptional service, not average service.

If the waitress went out of her way to provide extra service other than carrying a plate of food or a cup of coffee (which is what she does anyway), why tip?

Tips are for service over and beyond the call of duty, such as being a bit more friendly to visitors, rather than the run of the mill service. (Take the order and deliver the food and drink). A tip isn't given to a waitress that is crabby because her boyfriend came home drunk as a skunk and still has to get the brakes on his 68 Ford pickup truck fixed.

Tips are an option for extra service, not a wage.

I'll tip if I get very nice friendly service, but will not tip if the service is average. I tip 10% (that way I don't have to do much arithmetic, but will round up to the nearest dollar.

For taxis,let's say for a $16.00 fare, I'll give the driver $20.00 and he can keep the change if he gets me to where I'm goin' safely and efficiently, the cab is well kept and clean. I've been in cabs that should have been taken off the road, and the cab driver gone through a wash, rinse and spin cycle a few times.

As for ham people being stinky and overweight, the same can be said for any other group of people. Be it tennis players, doctors, lawyers, business owners.

If an empty helmet waitress writes in that ham people are stinky, give her a tip as in a written one on a folded peice of paper that says on the front

"Thanks for the food, it was great! Here's your tip:

Folded up in a square as an envelope, but inside is this:

If you go Seattle, Ivar's Seafood Restaurant has the best seafood in Washington State. There's one on the Seattle waterfront, and if you're taking the ferry to Whidbey Island, there's an Ivar's restaurant at Mulkiteo."

As for this Linda Sue, one wonders if she has a hick boyfriend with a shaggly moustace, keg belly and an '83 Ford F-150 with a gun rack in the back , has a bit of rust on it and works at the local

mechanic shop as a tool monkey. She's probably
a country music lover as well, and they both live in a trailer on the
southside of town.

"Mike Coslo" <mcoslo@adelphia.net> wrote

> The question kind of states it. I suppose that the BW might be wider as
> the speed increases.

There are three different bandwidths that come into play. They are "necessary bandwidth", "effective (or actual) bandwidth", and "apparent bandwidth"

Necessary bandwidth in hertz for copying a morse signal is defined as Bn=BK where B is modulation rate measured in Baud, and K is an overall numerical factor which depends on the allowable signal distortion. The commonly used values of K are 3 for non-fading paths, 5 for fading paths, and 8 for fading/multipath smearing. From the formula you can see that higher speeds (Baud) require more bandwidth, just as you supposed. The nominal "necessary bandwidth" presumed for CW is 100Hz which is based on 25WPM (20 Baud) over a fading path (B=20, K=5). Quite honestly, "necessary bandwidth" is primarily an academic exercise and planners tool, as it ignores some practical 'real world' issues and doesn't answer the question raised in your subject line.

Effective bandwidth is an actual on-the-air measurement of the width of the signal at some designated level, most commonly -60dB referenced to the peak. To understand what is being measured, you need to recognize that Morse is sent as an amplitude modulated carrier (AM) and that it contains sidebands. Like any AM signal, those sidebands extend nominally plus/minus the carrier at the frequency of the modulation, or BW=2M. Modulation of this signal contains two components.

The first component is the baud rate of the actual on/off keying (see "necessary bandwidth" above). Were it only for this component, measured CW signals would be very narrow, <100Hz, and dependent totally on keying speed.

The second modulation component is related to the rise time of the radiated signal. Fast rise times (where the RF envelope resembles a square wave) generate signals rich in harmonics and as these harmonics mix with the primary signal and each other in the transmitter stages, they produce sum and difference signals which become part of the sidebands of the radiated signal. The sharper the rise time and the more non-linear the transmitter stages, the more energy there is in the harmonics, and thus the bandwidth is wider (as measured at -60dB skirt points). Controlling this component of bandwidth can take the form of regulating the rise time (shaping in the keying circuit) and ovoiding overdriving of transmitter circuits.

The third kind of bandwidth is "apparent bandwidth". This bandwidth is determined by the effective bandwidth (see above) AND the performance of the receiver environment. If a receiver were "perfect", then effective and

apparent bandwidth would be equal (the receiver would perfectly reproduce the desired signal in the form it arrived at its antenna and would reject the effects of all non-target signals present.)

But receivers aren't perfect (well, maybe my Sherwood equipped R4C is close). Extremely loud signals (your neighbor 3 doors away) will sound ("apparent") several hundred kHz wide, because your receivers AGC will pump, RF and IF stages will be overloaded, and the faster he sends the worse it will be. I'm giving the obvious extreme example, but just to make the point. Many times just some reasonable adjustments of your receiver such as turning off noise blankers, reducing the preamp level, or turning your antenna will reduce the apparent bandwidth down in line with the actual bandwidth of the transmitted signal.

I tip a great majority of the time. Some times I may only have enough to buy the food with as I've not planned ahead to dine out. Any tip depends on how much I buy depending on how hungry I am and what on the menu appeals to me given what I have in my pockets to carry me through the total. I dine out on a whim most of the time. IF I have the cash, I pay 20% of my total or whatever close to it I can make. IF I don't have it, I at least thank them. I do NOT tip when drinking at a bar, as they are paid and don't do much outside of opening a bottle or filling a glass and setting in front of you then collecting your $1 or so for it. I don't use cabs, so no worries there. Went to a new Barber - New Years Eve. Haircut - $10. He made sure it was to perfection. I tipped him $2 which he thanked me for at least 3 times. I do NOT empty my wallet or coins of all just to tip. I do what I can - up to the 20%. I can't speak for ALL hams, but this HAM DOES TIP WHEN POSSIBLE. Like anything else, this smells of placing all in one barrel. Just because "a" ham doesn't tip, doesn't make us all "cheap". G.W.

According to independent analysts, BPL will not cost any less and will probably cost more. While they may have low introductory rates to get their foot in the door, after the first few months it will go up. Afterall the

need to install a LOT of additional hardware to do this. They can't just feed the signal in. In addition, you will need special hardware in your home computer to be able to access the signal. Finally, the signal will be easy to pick up since the lines are totally unshielded so that the problem of identity theft, among other things, will be even more serious.

CW code signals are around 100Hz wide, IIRC.

It might seem so if your receiver was in SSB mode. A narrowband signal
will still be
heard throughout the passband of a filter set for a wideband mode.
Also, if you were in CW receive mode instead, the receiver's AGC will
make the
attenuation of that filter's side skirts seem worse. What would be 10dB
down without
AGC will look like only say 3dB if the AGC is enabled. Especially as
you mentioned
(below) that w1aw was a strong signal.

But did you also turn down the RF gain and turn up the AF? Or kick in an
attenuator?

What WK3C posted earlier is correct - if a strong signal overloads your
receiver, its bandwidth may appear to be wider than it really is. If someone is
running PSK31 using the usual SSB-rig-feeding-a-soundcard approach, overload of
the receiver is a real possibility.

What was your setup?
>
>Your modulated carrier thing may just be a big clue. When the signal

Sure.

btw, W1AW's 80m CW freq is advertised as 3581.5 IIRC.

Oddly enough, last night I was "reading the mail" from W1AW on 40 meters while packing up some parts I sold. Signal was very clean on my Southgate Type 7. I'm not sure of the exact time, but the transmission ended with "END OF 35 WPM" ;-)

>

The transmitters at W1AW are all Harris "professional grade" transceivers, one for each band plus a spare. Computer controlled from the main console, no adjustments needed to the rig itself. But even Harris stuff can have problems.

Separate antennas for each band, too - the 80/75 antenna is a cage dipole between two of the towers. 80 feet up if it's a foot.

I'll tune down to 80 tonight if I get the chance and see how W1AW sounds.

It's provisional, intended to assist in gaining full qualification for
an amateur license.

>
> Here in PA, a person with a learner's permit for driving cannot drive alone.
> Could your learner's permit hams operate their own rigs all by themselves? If

>

Do you have aproblem with 10 years? Should we make it 10 weeks?

> Can you name any other license where, if you don't upgrade within a specified
> time, you lose the license you have?

There are no such amateur licenses extant, but for the majority of
it's availability the Novice license was exactly like that. That was
probably the most effective method ever devised of introducing
non-amateurs to ham radio with a "sample sized" operating permit.
Easy to get, with limited power so you didn't trash the
RF-neighborhood too badly, and of a duration long enough to decide if
you wanted to become a ham and to gain experience for the
qualification tests. Then they spoiled it by making it renewable.

> Work was getting in the way of my hobbies

The problem in this country is not a lack of unions, but the value system we have. For example where else can you find somebody with nothing more than a high school education, if that, making millions of dollars a year playing a kids game, basketball. Same goes for other sports like football, hockey, and baseball. Then there are those who make fortunes in the music industry because of their voice, or in the movies. None of these people contribute to the general well being of society on a day to day basis like the engineers, technicians etc. who design and repair the products that are taken for granted.

I find it really a twisted sense of value when a highly skilled technical person has to give up doing technical work if they want to have any hope of advancing their pay and career. Businesses value the marketing types, and the MBA's, above those who actually design the products. Very few forward looking companies have realized this and have done something about it. Those that have now implement a dual track system, one in to management for those who want it, the other keeps those interested in the technical area doing what they like, and both allows for greater advancement in salary and career.

Mike,

You're received a number of good answers. As for measuring bandwidth, I've used exactly two receivers that would be suitable for accurate measurement, and I couldn't afford either of them. With stability measured in 10 to the 9th power and accuracy at 10 to the 8th, these little babes were well over $50,000 in the mid 90s. LOL. Oh, and that doesn't include the cost of the IF spectrum analyser that was connected to one of them, nor any other costs such as calibrated antennas.

As stated, the rise and fall times of the waveform determine the bandwidth; often the receiver can deceive you as to what the bandwidth is.

Of course, it is possible there may have been a problem at W1AW.

>about for 90 years.

Actually about 66 years (1938). In all that time there have been only three main rigs - the original rackpanel jobs, the 1960s ones installed about the time the "new" Hq building went up, and the Harris setup from the mid-90s renovations. Something like 25-30 years of service per setup.

Trivia Quiz:

There was an ARRL HQ station before W1AW. What was its callsign?

There's a second callsign for the ARRL lab. What is/was it?

>Why tip for expected average service?
>
>Tips are a reward for exceptional service, not average service.

In every part of the USA that I've been to, tipping is customary in
full-service restaurants and certain other situations. That's for *average*
service.
>
>If the waitress went out of her way to provide extra service other than
>carrying a plate of food or a cup of coffee (which is
>what she does anyway), why tip?

Because it's expected. In fact, it's so expected that wages for waitpersons are
low *and* the feds expect anyone in certain occupations to report a certain
amount of tip income that doesn't show on their W2.

>Tips are for service over and beyond the call of duty, such as being a bit
>more friendly to visitors, rather than the run of the
>mill service. (Take the order and deliver the food and drink).

Where did you get that idea?

>A tip isn't
>given to a waitress that is crabby because her boyfriend came home drunk as
>a skunk and still has to get the brakes on his 68 Ford pickup truck fixed.

Sure. That's not *average* service - it's poor service.

>Tips are an option for extra service, not a wage.
>
>I'll tip if I get very nice friendly service, but will not tip if the
>service is average. I tip 10% (that way I don't have to do much arithmetic,

>taken off the road, and the cab driver gone through a wash, rinse and spin
>cycle a few times.

That's a lot more than 10%!

Shouldn't *average* cab service include all those things?

IIRC the accepted standard for measuring occupied bandwidth is -26
dB, which includes 99% of the signal.

I'm glad somebody picked up on that!

>Why *does*
>it matter how many licensed amateurs upgrade at any given point

It's an indication of how well the ARS is meeting one of its B&Ps.

>--and what
>determines whether they do or not? Anyone truly interested in the growth of
>the ARS needs to know those answers for effective marketing, esepecially if
>the concern is driven from a desire to see the ARS grow, rather than
>maintain numbers.

Agreed! And they also have to realize that there are a large number of
factors at work, not just the tests or the license structure.

>For me, personally, I am happy with my Tech License and see no reason to
>upgrade "just for the hell of it."

Exactly. You have the privs you want, and a callsign you like. What would
upgrading
get you that you don't have already?

>The "just for the hell of it" idea has
>never been a motivational factor for me in anything--personal, hobby, or
>professional. So, what marketing campaign would: #1 *reach* me and, #2
>motivate me to change my mind?

The only one I could think of would be to find something you want that you *don't* have now, and make upgrading the way to get it. But since you already have what you want, that's pretty tough to do.

It's like trying to sell me another refrigerator. The one I have now is 4 years old, works great, fits the available space and in general does the job. I'd like a bigger one but in this house I don't have room. The one I have is pretty energy-efficient, so it a more energy-efficient model would have to be a lot more efficient to make economic sense. I've never seen an icemaker that worked consistently, and they take up too much freezer room anyway. And after what this one cost to buy I'm not going to buy another one "just for the hell of it" either!

>The ARRL has never reached me yet (can't speak for others) on a campaign to >motivate me to upgrade.

I don't think anyone could, because there's nothing that you want from an upgrade.

Now when I got started, I couldn't wait to upgrade, because I wanted full access to the bands - all the bands. The requirements were no big deal - the worst of it was the 2 year wait between Advanced and Extra. (Try telling a 14 year old to wait 2 years for something...)

And it was cheaper to pay the license test fee than to build a 25 kHz calibrator to know the subband edges...;-)

But that's just me. Others were and are perfectly happy with what they've got.

> The only thing the ARRL apparently successfully >*helps* with (but is not solely responsible for) is getting *new* hams >involved. If that statement is true--and it's probably more true than >not--then what does the ARRL need to do to move past just getting new folks >to the hobby/service of amateur radio?

Publicity is a big thing, but it can be hard to come by because most people just aren't going to "get" amateur radio.

> I suspect it has *nothing* to do >with license class or even requirements.

I think you're right.

> When I decided to become a >licensed amateur radio operator I gave no thought at all to what it would

>take to get my license; only that I needed to meet the requirements at hand.

But why should they upgrade if they're satisfied with what they've got - like
you are, Kim? Sure, offer help and information, but if someone's happy,
don;t push.

Look how many Advanceds and Generals have *not* upgraded to Extra, even though
all it takes is one little 50 question written test.
>

>different phases of years, but the same number of years.

Well, a bunch of things, from the economy to the politics to lifestyle changes.
Then there's the 'net and cellphones and (as you pointed out some time back)

people having less time for organized hobbies and other activities.

I remember 20 years ago that lots of new hams came into amateur radio for "honeydew" reasons. Whole families got their licenses (with code, btw) so they could communicate with handhelds, mobiles, and home stations. Great stuff - but now they all have cellphones.

>And, Jim, I know
>('least I think I know) you will agree that CW testing or not may have
>nothing at all to do with the fact whether there was more or less growth at
>either time.

EXACTLY!

And yet code testing - even the 5 wpm test that's all we have left - is held up as some sort of "barrier" that is keeping out huge numbers of wonderful people who will bring about a new Golden Age....

You know the sales pitch. "Bring amateur radio into the 21st century" and all that. As if!

>It could have nothing *at all* to do with testing structure
>because, as I said, I didn't really take enough time to say, "wait a minute,

>Is that a good comparison? The Tech may not have...but what about the Tech+
>who, incidentally, has HF privileges and was that the motivating factor or
>did they just want a higher class of license.

Back before 1991, there was no choice. If somebody wanted a ham license they
had to do 5 wpm code. I know Techs who have been hams for 40+ years. Their
main interest is local work or VHF/UHF, and HF holds no appeal to them. I've
heard many say they're far more interested in talking to people who are
neighbors
and who they will actually interact with in person, rather than strangers
hundreds or
thousands of miles away that they will probably never meet and who they may
never
even QSO more than once.

>How many Generals and Extras
>are out there that upgraded (with or without CW) and don't ever really *use*
>their privileges.

I know plenty who are inactive or nearly so because their lives simply don't
allow it. I went through several years when my only operating was 2 meter
FM because I didn't have the time or space for an HF station or antenna.

>Remember that the ARRL's interest would also be in having
>enough numbers of hams to drive their "use them or lose them" campaigns
>(boring as they may be). This, by the way, is also why I believe the ARRL
>is not the successful agency it would like to believe it is. It is very

>apparent that the ARRL has failed to move past being a welcome mat.

Well, maybe, but there are other factors. For one, how many of the 683,000
hams in the database are active at all? With 10 year licenses, many of them
are SKs, or have lost interest, or are on hiatus for a while.

Just consider the SK situation. Suppose that just 2% of the amateur population
dies in any given year. In most cases, they will still be in the database until
their
license runs out. With 10 year licenses, that means the *average* SK stays in
the database for 5 years after he/she has gone to the Big Hamshack......

5 years at 2% a year means that 10% of the database is actually SKs. That's
over 68,000 hams!
>
>> FCC has been renewing Tech Pluses as Techs for 3 years, 8 months and 18

>because, heck, I haven't been on the radio in over a year).

My point is simply that some people may point to the large number of Techs
as "proof" of something or other, denying the fact that a growing number of
them are actually Tech Pluses.
>
>> >I would bet that a LOT of the Tech Pluses that existed in April of 2000

>
>I think Carl would find his statement to be false, or closer to false than
>truth.

Me, too. Remember too that code waivers have been around even longer than
a no-code-test license, so anyone who wanted to upgrade and found the code

tests above 5 wpm to be a "barrier" could have done so by the waiver route.
And many did just that.

Sure - but it's tough to do studies because the target keeps changing. For example, the FCC started issuing 10 year licenses (up from 5 years) back in 1984. That change means there were *no* expirations at all from 1989 to 1994. How do we figure that into the numbers game? Or the changes in vanity call rules that affect when licenses expire?

I was kind of hoping that it was a problem too. I've seen other CW signals on the waterfall, and they aren't that wide or nasty looking. Hopefully W1AW has been putting out a better looking signal for most of thos 90 years! 8^)

W1AW trouble would be my guess. The signal didn't "look right", which
is to say it didn't look like the CW signals we've coexisted with on
3580 until now. And the other ops were complaining about it too, and
some were a good deal further from W1AW than I am.

Attention All: the person posting as WA3MOJ@aol.com
is not wa3moj. Who is doing it is most likely tim nebo
aka Tim Nebout, a drug dealer and freebander from
LaMarque Texas who bootlegs on the 6 mhz aircraft
comm band and also on ham bands without a license.
If it is not Tim it is Steve Parks of Medina Ohio or Mark
Beck of SF California. All these people have an axe to
grind against anyone who complains about illegal
radio operation and notice please that none of them
have a license. They target hams and pick random
call signs like wa3moj or specific people in rrap that
they think might rat them out to the FCC etc or if you
have a record of supporting legal operation like Leland
Scott KC8LDO or even Jerry Oxendine. You may be next
these cb outlaws will stop at nothing including threats
and harassment.

Don't know if anyone has yet quizzed you as to whether you had your
noise blanker activated. That could cause the things you mention.

>

I agree...and even if they "get" it, the draw of the internet, cellular
phones (heck we may as well start calling them cellular devices), etc. will
detract from any interest they may have in radio. People can now transmit
pictures, video, and even play games and chat over cellular phones. The

cost is substantially less than it was and nearly anyone can afford them these days. I've heard of parents who give cellular phones to the kids so they can all keep in touch (man, that woulda been a real bummer for me...but) ;)

> performed to get the license.
>

And, it is *that* desire, emotion, need, want--whatever--that the ARRL needs to capitalize on. I am not a professional marketer...I only dabble in the concepts, but it can be done. Somehow. That moment of catching someone who turns their eye and interest at exactly the right moment...what is it that did that to them? Harness that, and the ARRL walks away from being a status quo organization to getting more folks into the hobby...hmmm, I just did a little bit of turnabout on my opinion there, didn't I? I criticized the ARRL for being a welcome mat and that is exactly what I meant they should be! What the criticism should be is that they *don't* have more strategies to grow the ARS--they merely maintain.

I think the discussion got a little diluted with mention of the "to upgrade or not to" issue. But, that's OK, I can keep up ;)

> >

> don;t push.

>

See? We got a little diluted, there. HOWEVER, I agree...there is no reason people should feel pressured to upgrade; if they do they are buying into the masses that attempt to make them feel that way. By the way, rewrite *everything* up above about the ARRL from the perspective that what they need to do is figure out how to move beyond being a status quo organization and *become* a welcome mat for the ARS... Gads, I wasn't even drinking...LOL

> people having less time for organized hobbies and other activities.
>

Yeah, and I truly think that the above is a hard thing to overcome in terms of keeping the ARS out in front of people to get them interested. The only thing I could think of that would work--and it would have to be a culture thing rather than just an ARS thing--is working at it from a "tradition" perspective. There will always be people who can inspire an appreciation for tradition. And, there's a *lot* of tradition in ham radio.

If the games of football, basketball, etc., can "get" people, then the ARS can. We also have to remember that it's probably a 50/50 effort between the ARS and amateurs who can take up the torch for the ARS. And, as mentioned above--we're running short on time. :(

Oh, I know. I was "writing out loud." I looked my call up on QRZ today (wow what a bunch of hits...but I digress) and I thought this was the year I had to renew my license, but it's in 2008. I guess that has something to do with changing my callsign...don't know, because it's been "around" ten years that I've been licensed...or it seems so anyway.

> >> >I would bet that a LOT of the Tech Pluses that existed in April of

Y'know...I didn't catch that the first time around. Is there an implication from Carl that there should be some kind of stigma attached to being "renewed at Techs with code credit"? I don't get that at all, if so. Are there really people who would think anything of that?!

> >>
> >> How many is "a lot"? The number of Tech Pluses has dropped by about

The target may not be as elusive as that. The "spark" that gets ignited with ham radio has nothing to do with "all that" and everything to do with the fascination of picking up a microphone and talking into it (sorry CW lovers...it's the truth for the majority). It's at the moment that the interest is sparked that the "deal has to be made." In other words, I think the only way to "grow" the ARS is to have venues (and I'm not talking about ham radio clubs) for ham radio. Childrens' wards at hospitals, scouting and other civil organizations, YM/YWCAs, etc. Why not develop a "Salvation Army" of ham radio?

Oh good grief...I'm the trainer and I tell people every day...you came up with the idea, you run with it. Uh uh...I was just "writing out loud again" and I am going to go have a drink and forget it...<grin>

For regulatory purposes, I think you're probably correct (or close to correct --- -30dB sticks in my mind). Path engineering types tend to be more conservative because we actually have to make the circuit work. Since bandwidth is a constrained resource, communications planners tend to treat it like money and "make less do more" --- when you're aiming for BER's of better than 1 x 10 to minus10, your 1% of remaining energy can pretty badly farkle up an adjacent path.

Mike,

I didn't get very far with this concept when I tried to introduce it a few months back either. I thought at the time that it might at least get some out-of-the-box thinking going, and remove the bonds of history and tradition which so often form the basis of reason for discussions in this forum -- but alas, it met a simlilar fate......

Ironicaly, one of the responses that you received was, with respect to the history of amateur radio, "Take that away, and it could not be anything close to what it is now". Say, wasn't that the whole point of the discussion? :)

Good try, though!

Nope, Just checked, and it is off. Not going to be much PSK on 3580
tonight. Must be an RTTY contest going on. Never saw so many RTTY
signals at one time!

4U1ITU is the station of the International Amateur Radio Club at ITU
HQ in Geneva ... I've operated the station. The significance of the
prefix is that 4U's are UN callsigns.

Hey Leo, Good to see you on my screen again! Tell you what. I'll start with what I think would happen, and if you like, you can join in. Maybe we can P**s off someone that they might comment.....;^)

Okay, here goes:

With a new service coming into play, a major mode would be digital voice. Repeaters will be allowed, and these repeaters on the 144 mHz band will also be digital FM, as will HT's. Repeaters and the HT's would be allowed to send images as well as voice.

Digital non-voice modes would include a PSK mode for typewritten material, and a high speed packet network would be allowed (remember that it takes some time to get these things going, and although allowed, would not happen for some time.

Small portions of each band would be set aside for experimentation, and here is the place where unusual methods of communication could be used. This would include things like OOK Morse or other encoding schemes or SSB.

Testing would be quite different that today. The most obvious difference is that there would be a lot more digital material covered in the tests. I would envision the basic digital building blocks tested. In addition, there would be the basic electrical theory and of course those questions about the various bands. (of course this would be a lot easier, since there would be less bands to cover) There would also be questions regarding proper operating etiquette.

A newly formed group, the Radio Readiness Association for Preparedness (RRAP) is formed, and sets up the first contest/practice run in this

year. Sorry - I couldn't resist! 8^)

One license, one class. 1KW maximum. No Morse code test.

- Mike KB3EIA -

I'm not speaking of the ITU but the IARU (not the same thing at all). The
IARU HQ station is not associated with the UN (nor the ITU) so does not have
a "4U" prefix.

Well, if you're going to get that many clues, make sure you leave a decent sized tip.. Don't want the clue salesmen in here whining about hams not tipping..

"It's Never Finished" - again correct.

>More trivia: There is an IARU HQ call sign. What is it?

That's easy: NU1AW

>While it may
>have a certain familiarity about it, especially the suffix, what is the
>significance of the prefix?

The original system for licensed amateur calls was a number and two or three letters. Maxim held 1AW, for example. This worked fine until amateur began working internationally and there was no way to tell what country a ham was in. When the first shortwave QSO was made by in November of 1925, the stations involved were 1QP, 1MO and 8AB - the last one being in France.

So amateurs invented the idea of unofficial prefixes. "NU" meant "North america, United states". So while Maxim's call was shown on the license as 1AW, on the air he would use NU1AW to indicate where he was. Other countries had different prefixes, all according to the unoffficial system

To emphasize that the prefixes were unofficial, they were usually written lower case: nu1AW

The situation was finally sorted out at one of the radio conferences of the '20s (1927, I think) and the USA decided that American ham calls would all start with W (in CONUS) and K (outside CONUS).

You will of course expect the licensing exam to be equivalent to the sum of
knowledge required for Tech, General and Extra for this single full
privilege license.

>

After playing around search the FCC database, the previous license of the vanity holder appears to be marked as terminated not expired so that the vanity call rules do not effect the numbers if the search is done correctly. If one searches for expired only, what they get as a result are only those that have lapsed due to non-renewal not those terminated due to changes in call sign and not those terminated due to disciplinary actions by the FCC.

Yup, it's the ARRL RTTY Roundup. This is probably the biggest of the RTTY
contests.

Sadly, the White Trash element is taking over ham radio in
ever increasing numbers.

2 meters = CB
Hamfest = Freak Fest

Do you expect White Trash to leave a tip? No, but you do
expect them & 12 of their white trash butties to cram into a
motel room intended for two guests.

Even funnier, give White Trash a ham license, and they suddenly
become "enforcers" of CB radio rules.

Thanks ARRL!

Willy
Houston

That's not it at all. The fact is that Morse code IS the second most popular
mode in use in the ARS today. IMHO, that in itself is sufficient
justification. Remember, we're talking about the 5-wpm test, NOT 13 0r 20.

> > I'm not much into the newer

The changes I find acceptable are already in a RM proposal. I've sent multiple letters and/or e-mails to my elected representatives, the entire ARRL leadership, and the FCC. That'll suffice for now, thanks.

YEAH BABY!!! You are THE BEST, Bill...thank you, thank you, thank you! Yes, I would very much "like to continue mandating a skill test for a mode that is all but gone from the world of radio communications EXCEPT WITHIN AMATEUR USE." Thats because it's a skill test for upgrading within, not entry into, the ARS and the mode is the second most popular mode in use in the ARS today. Too easy, Bill.

We both know the manual gearshift analogy really doesn't work, so I'll skip that part. However, on the subject of you kids, weren't you the least bit concerned that some other impatient jackass might choose to jump in his college roomates car and just "wing it" down to the store for a pack of cigarettes? I've seen this at Wagner College in Staten Island. The "down" part refers to "down the hill" to Targee Ave. as cigarette machines were not allowed on campus. This is the jerk who'll say he's sorry over and over for hitting your kid's car. I guess that's why defensive driving is so important. Still...I'd sure be concerned.

No Bill, I want a very defined (Element 1) very measurable (5-wpm) effort for two (Not any.) license levels.

> determinator.

You mean the second most popular mode in use today doesn't rate as a valid test requirement determinator. Gee, we could have one for the first most popular, SSB, but we already know how to talk. That's way the stand-alone, Bill. It's a learned skill that's an unknown coming in. (Unlike speech.)

> > > There was, in the past, a rational reason

1. Second most populat mode in use in the ARS today.

2. Unlike speech, this is a new skill that must be acquired.

3. Because an awfully large portion of licensed ARO's want it.

> > > What part of amateur spectrum is considered highway vs

It's like pairing up Tennis partners. A beginning recreational player is usually not paired up with the club pro unless it's for lessons. (Elmer) BTW, I have a confession. My very first AR CW QSO was on 7031 kHz, but it was wuth my Elmer. ;-)

I just happen to agree with Hans' plan. Allow the amateur to
distinguish him or herself through actions rather than an FCC forced
march.

I usually get a personal copy about every 4 or 5 years. Used to get
them annually when I was in the contingency business, among other
publications.

> As an aside, anyone know if ham radio is ever in a almanac? I thought

> Radio!

The flying horse pubs were a nice compilation of ham info worldwide,
but with the advent of the QRZ and other online databases...

What ever happened to Timmy's website; wasn't it http://www.timnebo.com

Remember checking it out a couple times Timmy displaying his stash, cheap Pawn Shop weaponry, 20 inch Nigga rims and a bunch of crack whores and big bottom black women.

Funniest thing ever!

> > have a license.

Again, not true. I had mine many many years ago, you
said so in previous posts, don't you remember what you
post? I don't live, nor have I every lived in SF Ca., so
another lie and attempt at deflecting attention from the
fact that you posted this:

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy
department, regarding abusive, offensive and/or harassing emails/postings
sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet
newsgroups with a known AOL user as you're account information RE:
wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service
(http://sbc.yahoo.com/terms/)and Acceptable Use Policy
(http://support.sbcglobal.net/legal/aup.shtml) to use our service to email
or post, threatening, abusive, obscene, hateful, or otherwise objectionable
material.

If additional complaints are received concerning your SBCIS account, it will
be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

> > and harassment.

No, you used you're call sign, it was your mistake, not
someone else's. Leland & Jerry have been on RRCB for
more years than you, no one's used there call sign in vain
yet that I know of. Again another way of you trying to
deflect the fact that you are a troll on RRCB, post hundreds
of times a week, under forged screen nics, changing them
to by pass newsreader filters, harass, accuse, use foul
language otherwise know as a TROLL!!

And, in my humble opinion, it is not sufficient justification - no more than the fact that vacuum tubes or circular analog tuning dials were once popular justifies a requirement that they continue to be used. Clearly, unless there is a valid reason otherwise, anyone should be free to use those if he or she wants, but there should be no government regulation mandating that. The same with Morse code.

> Remember, we're talking about the 5-wpm
> test, NOT 13 0r 20.

If a person has no interest in code, the speed certainly isn't going to change that.

> (snip) Yes, I would very much "like to

> into, the ARS (snip)

The Amateur Radio Service does not exist in a vacuum, Bert. The FCC recently said "the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service." They came to that conclusion after looking at modern communications systems outside Amateur Radio and the changes that have occurred in communications over the last fifty years. They noted that "no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear." And they said reducing the emphasis on telegraphy proficiency as a licensing requirement would "allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise."

> You mean the second most popular mode
> in use today doesn't rate as a valid test
> requirement determinator. (snip)

If you're going to argue that to justify a test requirement for the second most popular mode, why not argue the same for the third, forth, or even fifth, most popular modes?

By the way, where did you get the idea that CW was the second most popular mode? I agree that SSB is probably the most popular. But, given the sheer numbers of Technicians today and the fact that not all others use CW on a regular basis, certainly far more people use FM than CW today.

Note that the newsgroups "rec.radio.cb" and "rec.radio.shortwave" were removed from this reply (off-topic in those newsgroup).

That deemphasis has already occurred. The no-code tech was instituted in
the late 1980s and the code for the higher classes was dropped to only 5wpm
in 2000. There is no need for further deemphasis. Particularly when the
stated reason was attract technically inclined people. That hasn't happened
so the reason for deemphasis has been proven to be invalid.

The poster should have qualified that by saying "second most popular mode on HF". The usage of FM on HF is very strictly limited and regulated and isn't appropriate for use on bands that are as narrow as the HF bands.

As far as testing for the other modes:

Voice - we've all been talking quite some time, the only additional knowledge needed is procedural, which can easily be covered by the written tests

SSTV - just a matter of hooking up the hardware and then following the correct operating procedures, both of which can easily be covered by the written tests.

Digital modes - just a matter of hooking up the hardware and then following the correct operating procedures, both which can easily be covered by the written tests.

Morse code/CW is unique and cannot be covered by the written tests. Actually I happen to believe that there would be great benefit to requiring candidates to demonstrate other basic skills, such as soldering a PL-259 to coax as an example, for licensing. But I know it won't happen.

We don't require knowledge of second languages just because
one or more languages other than English are used by vast
numbers of non-USA hams.

Why does mode popularity mandate a separate skill test just
because others use it? NO other mode has that special
treatment...and, it appears, the FCC understands that.

Of course it is an issue. Any test requirement that can't be justified has
no reason to exist...regardless of how much or how little effort
may be required.

> today. Too easy, Bill.

Too bad your argument doesn't hold sway with the FCC. Additionally,
a dozen or so other countries have already abandoned morse testing
completely. The dominos are falling...it is just a matter of time. The

USA fully endorsed the end of mandatory code testing in the treaty.
Do you expect a reversal of mindset on the internal (USA only) position
by the FCC?

Other than a rather funny tale of an auto thief wo didn't drive a manual
but hijacked a car that was and the bozo lurched the car a couple of times
and then stalled it...I have never heard of anyone being a threat to me
or my kids because they didn't know how to drive a manual gearbox.
Frankly, if you are worried about that happening, you must lead a very
paranoid life. Far greater danger exists from the general driving
public who can't handle their vehicles in anything that resembles
non-perfect driving conditions.

And when the FCC ends that requirement, what is your
desire for additional "work effort" requirements?

Sorry, not everyone talks as you well know. Based on your claim,
everyone should at least be able to have a "voice" QSO, because voice
IS the most popular mode...yet there is NO requiremnt that anyone
be conversant or have voice skills at all. Yes a significant portion
of hams have natural speaking ability, BUT that is NOT true of 100%
of hams...yet there is NO requirement at all for speaking ability.

Gross oversimplification and very uninformed viewpoint.
The FCC's goal is to have rules and regulations that make
sense. If FCC work were the ONLY driving force, they'd
probably end amateur radio completely.

What or how would ending morse result in less work for me
and/or other NCI folks that previosuly passed any code test?
We gain nothing.

If you can't find a copy, let me know. I'm pretty sure its on the FCC
web pages. It may also be on or have a link to it from the
www.nci.org web site.

>
> 1. Second most populat mode in use in the ARS today.

Failed to convince the FCC...see R&O for 98-143

> 2. Unlike speech, this is a new skill that must be acquired.

Also Failed to convince the FCC...see R&O for 98-143
PLUS, there is no known harm, danger or threat if a ham
does NOT know te code and/or if a ham decided to learn
and practice on the air even though s/he never took a code test.

> 3. Because an awfully large portion of licensed ARO's want it.

Totally failed to convince the FCC...see R&O for 98-143
The rules and regs of amaeur radio are NOT decided by
popular vote of already licensed hams. Even as to a position
of actually what percent of already licensed hams might
want code testing retained, there is no good data that provides
an accurate picture. The last "survey" of any type was done
by the ARRL almost 10 years ago. NCI did an analysis of
comments filed pro/con when 98-143 was open for comment
and which showed the continued drift from support of code
testing. That too is now over 5 years ago.

The bottom line, (you can agree or not) is that ever since the
concept of no code testing began, the amateur community
has not been universally opposed to ending code testing.
From my perspective, the percent of hams that absolutly want
code testing to stay is an ever decreasing percentage. Exactly
what that percentage isn't known...but, if a survey was held
again, I'm sure it is less today than it was a 5 years ago and
will be even less again a year from now since newcomers
are 'generally' not proponents of code testing and as older
hams which constitute the bulk of code testing support
die off. That may seem crass, but that's the truth as I see it.

In the end, again, the FCC isn't going to make any determination
to keep code testing because X perecnt of hams want to keep
a code test. That is, again, very clear in the 98-143 R&O.

> Not very nice, Bill.

Life's a bitch and then we die. Those that are uncomfortable as
new drivers at highway speeds stay off the highway. Most
highways have minimum speeds to maintain that mindset. If
segments of amateur spectrum became known as high speed
CW segments, then what;s the problem?

> > > I've had a couple of ops QRS from 20-wpm down to 19-wpm

> was wuth my Elmer. ;-)

I repeat, if a new ham ventures into a band segment that is known
or expected to have high speed CW as the norm...and that ham doesn't
get anyone to respond at his/her slow code speed, that's just
the way it goes. That's part of learning for any new ham.

Cheers,
Bill K2UNK

Not at all. I'd make the Extra the only license allowed 1500 watts.

I have never accepted the argument that ending code testing would
result in more technically inclined folks becoming hams, BUT...
until access to the full spectrum of ham privileges comes with
no code test at all, the statement that: "That (more tech inclined hams)
hasn't happened so the reason (ending some code testing, but
not all) for deemphasis has been proven to be invalid" IS
on its own merits invalid.

BUT, there are some hams who have NO voice ability at all.
Should they be prohibited from becoming hams? Should we
have a medical waiver for those voice handicapped hams?

> SSTV - just a matter of hooking up the hardware and then following the

Wrong. The ability (the skill) to send/recieve may not
be a written test aspect, but the theory, signal characteristics,
and some other aspects can be and are on the writtens.

> Actually I happen to believe that there would be great benefit to
requiring
> candidates to demonstrate other basic skills, such as soldering a PL-259
to

Why would you want that? Frankly, soldering has never been
a strong point with me...yet I've been able to do quite well
technically in my career as well as ham radio. I can "get by"
but prefer to have others do some of the connector soldering
chores for me.

Additionally, a soldering test, especially a PL-259 would be
too subjective a determination. Even soldering can't be learned by
all hams. Would we then have a soldering waiver for blind hams
or other hams handicapped by some affliction that didn't allow
them to ever pass a soldering test?

Cheers,
Bill K2UNK

>

Bert, if you're using popularity as a justification--and the test questions
may have changed to inlcude this since I entered ham radio--then why are
there no questions or demonstration required during testing for the *number
1* most popular mode of operation?

Not that I am arguing against your desire to see CW stay as a test
element--that is your desire and I have no problem with it at all. But, the
argument of popularity probably doesn't, in fact doesn't with me, hold water
for importance--and can be turned around to my question above: why not have
questions based on phone operation and also have the mode tested? A net
condition is easy to establish for testing, doesn't even really require
radio at all (it could be "pretended" in any room with more than one
person).

> >
> > No problem there and I don't oppose "knowledge" questions

>

heh heh...see...I haven't sent any, as the issue isn't that important to me
and I can live with it either way. I really never intend on upgrading, and
already 5 wpm. I leave the real meat of this issue to those who are that
passionate about it. :)

> >
> > You'd rather we continue mandating a skill test for a mode that

Yes,
> I would very much "like to continue mandating a skill test for a mode that
> is all but gone from the world of radio communications EXCEPT WITHIN
AMATEUR
> USE." Thats because it's a skill test for upgrading within, not entry
into,
> the ARS and the mode is the second most popular mode in use in the ARS
> today. Too easy, Bill.
>

Again, I point out that it would probably not be a plus for the FCC to
continue facilitating a CW test, when it is nearly only the ARS that has it
in use today. I am not sure what costs are associated with administering
the CW test, but one must inlcude any time spent/wasted (depending on your
point of view) for the FCC, congresspersons, etc., to read and deal with the
issue.

> >
> > So let me get this straight. You wantis some undefined,

>

I think it's OK to have two license levels. But, rather than a CW test, I'd support nearly anything else but a mode test--any mode. Written tests suffice for any level of license.

> >
> > Irrelavent. The point is NOT the effort, and the FCC has

Ruh roh...there you go again with the "second most popular mode." If that is justification, then the first most popular mode needs to be tested, not the second. :o

There ya go!!! Man, I'd love to see establishing a station
tested--AND--that can be done either through written explanation or physical
demonstration. And, soldering would certain be something that I'd agree
with, too!

Now see here is a perfect example of the threats from
these guys. For those who do not know moparholic
he is Steve Parks of Medina Ohio and unlicensed
bootlegger who brags using ham gear on hf bands.
and breaking fcc laws etc. The other one is Landshark
aka Mark beck of Fremont CA he had a ham license
but let it drop because he could not follow the rules
so you see what kind of people these are confirmed
outlaws. And FYI they have been after Lee Scott KC8LDO
for years because he was brave enough to stand up
to them and there leader Twistedhed aka Dave
McCampbell of Florida.

At 5-wpm, it's more a demonstration of discipline than proficiency. That is
where the true crux lies.

They've already reduced the emphasis by creating the no-code Technician ticket and further by reducing the required code speed for the General and Extra tickets.

Unique skill, Dwight...decoded by the human brain. Speach for phone and reading ability for digital are skills brought into the fray from day one.

My apologies, I should have been more clear. I actually meant Phone vs. Morse code. I used SSB because I almost never use FM, only for ARES work. Additionally, I'm pretty much always on HF.

> Note that the newsgroups "rec.radio.cb" and "rec.radio.shortwave" were

Good call, Dwight. Embarassingly enough, I hadn't even noticed.

>If one searches for expired only, what they get as a result are only those
>that have lapsed due to non-renewal not those terminated due to changes in
>call sign and not those terminated due to disciplinary actions by the FCC.

Agreed on all that but my point was somewhat different.

With one exception, the way the rules have worked for some time now is that you can only renew within a time window of 90 days before or two years after your license expires. So it would seem that the expiration dates would be spread out over time, and not cluster in any particular year.

But a vanity call gets you a renewal regardless of where you are in the license term. And when the vanity rules changed, there was naturally a spike in application numbers - and 10 years later, a spike in expirations.

I gotta tell ya, Bill. You're your own worst adversary wrt to this debate.
Did you bother to tell the NCI newbies about the benefit of using Q signals
and prosigns on CW? Remember this post, Bill?

Nah, how about just the *second* most popular language on the air...prosigns and Q signals. They allow us to effectively communicate with the third most popular language...and fourth, and fifth, and so on...

That's right, Bill. Try getting your message across via phone to that JA station who doesn't speak a lick of English, WITHOUT speaking Japanese. I can...and you know why. Too bad your NCI followers don't know why. Didn't you tell them, Bill? Oh, you left that part out. No prob, your secret's safe with me.

P.S. Here's a useful phrase for the <English only speaking> NCTA's next SSB encounter with a JA station, "Ei-go ga dekimasu ka?" (Do you speak English?)

Obviously you are unaware of how the vanity call system came about. One ham,
who had his RM proposal denied by the FCC, wrote a letter to his
congressman. Turned out this particular congressman had some influence on
the FCC's budget. Bill Clinton signed the bill that had our vanity system
attached to it...no RM proposal needed. One ham CAN make a difference.
Sounds kinda cliche, eh? "One ham, one letter, one vote!" <ggg>

None, while I support Element 1's retention, it really doesn't affect me
personally. Don't count your chickens before they're hatched, Bill. They may
just eliminate it for Novice/Tech "+" privies. (Cool by me.)

I don't really believe the FCC has the ARS' best interests in mind, so that kinda rings hollow from my perspective. Just think BPL.

> > 2. Unlike speech, this is a new skill that must be acquired.

I care a tad more about my fellow newbies than the "life's a bitch and then
we die" mindset. Thank goodness my Elmer taught me how to avoid OTA death
syndrome.

Yes. Good plan. (Toss in Novice and Advanced while we're on the topic.)

So lets see here. If the new jet airliners will fly and land themselves, the persons that occupy the cockpit don't really need to learn to fly. Makes perfect sense. They don't need to learn to fly because the computer does it for them.

Very insightful, Mike! Especially the use of digital voice, and the transmission of images on 144 MHz repeaters. That does make sense! I'm surprised that digital voice in particular is not being played with much today on HF - that may well be the future of radio right there, based on the direction the commercial broadcasters are headed.

I would also expect to see much more emphasis on the convergence of the Internet with amateur radio - IRLP, e-mail servers, wireless messaging and similar concepts, for example. Handheld radios would probably have many cellular-like features - text messaging and built-in cameras, for example.

I am positive that CW would be rediscovered and resurrected by those who wished to experiment with a historic signalling method used in the golden days of long distance communication. Special interest groups would spring up, as they would for RTTY, SITOR and other interesting though antiquated protocols. However, truly outmoded forms of communication common today would not exist at all, such as the repeater phone patch (in an era of cheap cellphones, who would even think up this one?) For emergency use, a similar interface to the public network would be provided, perhaps directly to a PSTN operator. No more personal phone calls, though!).

Without the legacy of all of the current AM, CW, SSB, RTTY etc. equipment from years gone by, the requirement to fully support these modes on the new bands would not exist. What modes would be popular in equipment produced to meet the demands of the amateur service? In addition to standalone radios (at least for handheld service anyway), would we see black boxes designed to interface to PC and antenna, with software to run all manner of digital communication (high speed modem, digital voice, image transmission, low-res full motion video, etc.)?

I would also anticipate that, in the interest of ensuring compliance with regulations, that each commercial radio may be designed to automatically transmit a unique identifier over the air, which would allow authorities to trace back faulty, out-of-band or malicious operation to a particular unit. This feature could be coupled with a built-in GPS receiver, to further aid in localizing the radio if and when necessary. This may well raise privacy concerns, but it could be mandated as part of the operating licence, just as mandatory transmission of the operators' call sign at intervals is today. And, as we are assuming a brand new service, it would be relatively easy to do - with no older units to retrofit. What would happen with homebuilt equipment, though?

With respect to testing, I would anticipate that the regulatory and operating etiquette sections would continue to exist in virtually their present form. Along with the addition of more Digital questions to the theoretical portion of the tests, we may well see questions on interconnection to the Internet, firewalling and network security.

There may be a new test section on emergency traffic handling, radio net and message relay operations - this being the most likely premise that we would be able to convince anyone to hand over all of this valuable radio spectrum to us in the first place! And given the priority of national security in our post-9/11 world, there may be a mandate for the amateur service to link very closely with the various emergency management agencies, upon governmental request?

I would envision a requirement for perhaps two different licence levels, though - one for the basic equipment operator, limited to perhaps 100 or 200 watts, commercially built and type-approved transmitting equipment only, not permitted to act as control operator of repeaters. A higher level licence would be granted upon passing more stringent testing on RF safety and high power operation, repeater commissioning, internetworking and advanced electronic theory, which would remove these restrictions.

Either licence level would have full access to all bands and modes, with no restrictions other than those listed above. The licence levels are not intended to be incentive based, but to ensure competence and safety (both personal and public) when installing and operating multi-user automated-access, internetworked or high RF power output equipment.

Of course, there is the remote possibility that a Usenet group dedicated to the endless (and animated!) discussion of whether RTTY testing should be discontinued might crop up - hopefully very remote :)

Please add or subtract from this list at will!

But George, you said on the previous post I lived
in SF Ca., now I live in Fremont ca.? which is it?
You have also posted that I live in Modesto Ca.,
Stockton Ca., Waterford Ca, among other places.
You have claimed that I have these ISP's Netcom,
WebTv, Mindspring, Earthlink, AOL, PacBell, SBC
again, among numerous others.

> he had a ham license
> but let it drop because he could not follow the rules

Again, on the previous post you claimed I didn't
have a license, now I lost it for not following
the rules? LMAO!!!! I let it expire because of trolls
like you on the local ham bands, not because of
"following" rules.

> so you see what kind of people these are confirmed

Now George, you know I have nothing against
Leland or Jerry as with most other people I have
nothing against them either. George Busch wa3moj
who trolls RRCB has a problem about trolling, that's
why he create these posts, then cross post them
to cause a flame fest.

Look queersack how many times do I have to
tell you you have no proof that WA3MOJ even posts

in here just because you saw those letters and numbers
at the bottom of someones post means nothing. Dont
take my word for it take Brainbusters he said callsigns
are meaningless in a CB newsgroup and they are just
random letters and numbers could mean anything like
kp82 tim nebo or scott unit 69 or what ever. There may
be some trolls who want you to think I am wa3moj but
they are laughing at you because you are so fucking
stupid how could any one be so stupid.....Now go take
a transexual up your ass.

Now of course it's you George, why else
would I have gotten the warning letter about posting under your aol screen nic
wa3moj@aol.com :

Subject: Warning - Posting to Newsgroups
From: Prodigy Abuse Department <abuse@prodigy.net>
Reply-To: donotreply@prodigy.net

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy
department, regarding abusive, offensive and/or harassing emails/postings
sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet
newsgroups with a known AOL user as you're account information RE:
wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service
(http://sbc.yahoo.com/terms/)and Acceptable Use Policy
(http://support.sbcglobal.net/legal/aup.shtml) to use our service to email
or post, threatening, abusive, obscene, hateful, or otherwise objectionable
material.

If additional complaints are received concerning your SBCIS account, it will
be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

Now I did that to prove you were really
posting on RRCB and that you did have an
AOL account, but you still show your trolling
ways by the response to the previous posts.
Why else would you be so vehemently denying
that you are George Busch wa3moj trolling
RRCB.

Landshark

Now do what is expected and make a denial
from you're Comcast account now.

>that. The same with Morse code.

Irrelevant, Dwight. The amateur community has specifed the criteria
and goals of amateurism.

First and foremost is morsemanship. This is necessary to show the
requisite dedication and commitment of all amateurs to the community,
that they posess the needed self-discipline to learn the most vital and
important mode in radio today, on-off keying by morse code.

>> Remember, we're talking about the 5-wpm
>> test, NOT 13 0r 20.
>
> If a person has no interest in code, the speed certainly isn't going to
>change that.

Obviously such individuals are unworthy of amateurism, lacking the
necessary dedication and commitment to morsemanship and
possessing absolutely no self-discpline.

>> (snip) Yes, I would very much "like to
>> continue mandating a skill test for a mode
>> that is all but gone from the world of
>> radio communications EXCEPT WITHIN
>> AMATEUR USE." Thats because it's a

>the amateur service to, as it has in the past, attract technically inclined
>persons, particularly the youth of our country, and encourage them to learn
>and to prepare themselves in the areas where the United States needs
>expertise."

Irrelevant. The amateur community sets standards. FCC, ITU, IARU
has no bearing on standards and practices.

Morsemanship is vital and important to save the world should aliens
arrive from outer space, trying for conquest of the earth.

Morsemanship is vital and important to home security, protecting us
from terrorism.

Morsemanship is vital and important during disasters and
emergencies when all the communications infrastructure fails.

>> You mean the second most popular mode
>> in use today doesn't rate as a valid test
>> requirement determinator. (snip)
>
> If you're going to argue that to justify a test requirement for the second
>most popular mode, why not argue the same for the third, forth, or even
>fifth, most popular modes?

Irrelevant. Morsemanship stands on its own. It does not need
polls or popularity opinions.

Morsemanship is the most important aspect of amateur radio today.

It demonstrates self-discipline, dedication, and commitment to the
amateur community. That is vital and necessary.

> By the way, where did you get the idea that CW was the second most popular
>mode? I agree that SSB is probably the most popular. But, given the sheer
>numbers of Technicians today and the fact that not all others use CW on a
>regular basis, certainly far more people use FM than CW today.

Irrelevant for reasons shown above.

Morsemanship is vital and necessary, stands on its own. It is LAW.

LHA

Morse code skill is the epitome of amateur radio.

The morse code test should never, ever be removed from US amateur
radio law.

If fact, the morse code test word rate should be increased to HIGHER
than 20 WPM.

This will inspire even greater self-discipline, dedication, and commitment
to the amateur comunity's goals and standards.

Morse code modes SHOULD be First, not second.

Morsemanship is vital and important.

That morse code modes are merely second shows a definite lack of
self-discipline, dedication, and commitment to the goals of
amateurism.

>> > I'm not much into the newer

Absolutely. Morsemanship is vital and important. The test shows
self-discipline, dedication, and commitment to the amateur
community.

Insufficient self-discipline and dedication to morsemanship.

You can do more.

You are judged a slacker and ne'erdowell, demonstrating insufficient
dedication and commitment to the amateur community.

You have been warned.

LHA

It's the LAW, Bill. LAW can't be changed.

[normal US democratic principles and the First Amendment of the
US Constitution does not apply to amateur radio law...]

>> I'm not much into the newer

Morse code is the epitome, the ultimate top-most skill that
amateurs can possess.

Morse code skill is absolutely vital and important for all radio
amateurs.

>> > Answer the question asked...The question is, for those that need

Everything outside of amateur radio is irrelevant.

Amateur radio communications operates outside radio physics
laws applying to every other radio service.

I have been told these TRVTHS as they were engraved on the
marble and granite of other amateur extra's minds and stated
to me.

>> If

>learn is just bunk.

No, it is Divine Law. US amateur radio is all about morse code.

>unmeasurable amount of effort that the FCC should be
>trying to have in place for any license level?

Absolutely vital, important, and a fact of life that all must
demonstrate SELF-DISCIPLINE, DEDICATION, and
COMMITMENT to olde-tyme hamme tradition.

Morse code skill is an integral ingredient of that tradition.
IT MUST NOT BE BROKEN. EVER!

>> Again, drop those published Q&A pools and watch the squirming
>> commence.
>
>It will never happen and I don't care if it did. The old
>ARRL and AMECO learners guides were just as easy to
>memorize sufficiently to pass. I did the General test in
>the late 50s exactly that way.

Irrelevant, Bill. That does not demonstrate self-discipline and
blind obediance to the traditions of the amateur community.

>> Folks just don't want to be made to have to sit down for 20
>> mins., twice daily, for a month or two and memorize 43 Morse code
>> characters.
>

>is not now and never has been recognized as a valid test requirement
>determinator.

Self-discipline demonstrated to the whole of the amateur community.

Vital, important, necessary.

>> > There was, in the past, a rational reason
>> > or set of reasons for code knowledge. Those days are gone.
>> > It is that simple.
>>
>> There still is. It's the second most popular mode in use in the ARS
>> today.
>

>issued a license. Those that wish to engage in
>morse contacts are free to learn morse and use it.
>The issue is solely the test requirement and has no
>link to actual morse use by anyone.

Option is a failure.

Morse code skill MUST be demonstrated to the amateur community
to show dedication and commitment to olde-tyme hamme radio.

>> > > BIG BIG DISCLAIMER: I am quite aware that this is not true for all

>The rony of your claim is that most of us that are the
>nucleus of NCI activity had already done the morse
>test at 5, 13 and/or 20 wpm. Nothing to gain now
>if code testing goes altogether.

Morse code skill MUST be the prime focus of all amateur radio.

All else is superfluous and irrelevant.

Except membership in ARRL, of course...

>> Do you really want to focus on the code test,
>> Bill. Quite frankly, Element 1 is NOT much of a code test to focus on
>> and very rarely leaves anybody with any level of OTA proficiency. So

>
>What, no motivation? :-) :-)

Insufficient dedication and commitment to the amateur community.

ARRL speaks for amateur radio. Individuals do not count.

>> Trust me, my bubble is very much intact. I came into AR approx. three
>> years ago pretty much oblivious to the code vs. no-code debate. All I

>
>Exactly. So then why the need for code skill testing...oh,
>I remember, the FCC must impose a mystical quantity
>of effort for all ham licensing.

US amateur radio is all about morse code skill.

All amateurs must exercise self-discipline, dedication, and
commitment to the amateur community by becoming
morsemen.

>> > What part of amateur spectrum is considered highway vs
>> > non-highway?
>>
>> Thanks for makin' it easy, Bill. How about the CW only portion of

>> encouraged?
>
>IF they did so, so what? They'd either make a QSO or not.
>Nothing ventured, nothing gained. If they felt out of
>place they'd shift to calmer waters.

Not relevant. No dedication or commitment to the epitome of
amateur radio skill embodied in morsemanship.

>> I've had a couple of ops QRS from 20-wpm down to 19-wpm
>> for me and lemme tell ya, it wasn't fun. Conversely, I have had guys
>> switch to some really nice Farnsworth style 25-wpm character speed

>> breezed on by with very little effort or tension.
>
>To each his own. What ever floats your boat. I see no problem
>with newbie hams doing morse at slow speeds anywhere morse
>is allowed as long as they do so within the rules.

Those should be drummed out of the corps, banished to the nether world of VHF and higher. All must show commitment and dedication to the amateur community by maintaining a pool of trained morsemen ready and waiting to save the world from alien invasion.

Everything good in US amateur radio is about morse code skill.

Self-discipline, dedication, committing to the olde-tyme hamme traditions. Showing all one's hard work and efforts.

Words to live by in the amateur lifestyle, the belief system that is the bastion of amateurism. Amen.

>Hey stupid. The thread is about "Why I hate ARRL".

Incorrect. The thread subject is titled "Why You Don't Like The
ARRL - More to like than dislike."

Your web browser seems to be defective. Get it corrected.

>This concerns HAM RADIO.

"Ham is the butchered meat of swine." [You can get the same sort
of definition from the official FDA if you like... :-)]

>Ham radio operators operate on shortwave.

"Shortwave?!?" In the electronics industry, the term "shortwave" or
"shortwaves" is becoming common in defining microwaves.

US radio amateurs are allocated a number of HF bands plus one
band within the MF portion of the EM spectrum.

US radio amateurs are also allocated a number of bands above
70 cm which can qualify as "shortwave."

>Glad to have you correct my spelling anytime oh great one.

It's a tough job but someone has to do it.

>Anonymous? Naw. I have a
>valid email address listed in each and every header.

Absolutely NO valid amateur radio identification for you, ANONYMOUS
PERSON.

>Anyway, if you
>check out the thread you will find it does not concern you.

Oh, my, another Raddio Kop, self-imposed guardian of the webways.

Such come out of the webwork like mice or rats, ready and eager
to gnaw on meager morsels of melifluous metaphors of others.

Bon apetit, ANONYMOUS ONE.

>I just happen to agree with Hans' plan. Allow the amateur to
>distinguish him or herself through actions rather than an FCC forced
>march.

While I agree on the generality of that, such is impossible under
the present-day Class Distinction Rules of US amateur radio.

ALL perceived expertise is judged by the "amateur community"
as demonstrated by the fancy-bordered license (suitable for
framing) from the federal government.

The Amateur Extra is the epitome of excellence. Once achieved,
nothing else need be learned. Education ends. You have been
told by his Most High Excellency, the Dill Instructor.

All learning comes through having tiers and tiers of classes, of
distinctions (enforced by law) right along with the social need of
call letters written behind the name to signify a "title" all may see
(and admire, respect) as if it is a dukedom, barony, or other
noble rank. That is VERY IMPORTANT. Do not criticize any
statements of the ruling classes of the "community."

US amateur radio seems to have ceased being a hobby, an
avocational activity done for personal recreation. It has become a
LIFESTYLE...a True Belief.

All that is required is a test of morsemanship. All else is irrelevant.

Morsemanship is the epitome of amateur radio today.

Passing a morse test shows dedication, commitment, and self-discipline to the amateur community.

That is vital and necessary.

Well of course but that's already been done. The current Tech pool now
covers the old Novice material and the current Extra pool now covers the old
Advanced material.

Dee D. Flint, N8UZE

Passing a morse code test shows vital and important self-discipline,
dedication, and commitment to the amateur community.

That should be self-evident.

Status quo forever.

I was not able to "speach" a half century ago.

However, after dedicating myself and working up self-discipline (as a
demonstration the community), I'll see if I can test for "speaching."

>> Not that I am arguing against your desire to see CW stay as a test

"Privies" are many outhouses.

That seems to fit...

>> > > No problem there and I don't oppose "knowledge" questions

>speaking Japanese. Let 'em try that on phone.

As a demonstration of my self-discipline and dedication to my
community, I was able to "speach" directly to a Japanese business
associate about three weeks ago. On the telephone. To Japan.

We speached English.

However, you are correct. All foreign amateurs are born knowing
English abbreviations and Q codes used in morse. Morse code
use allows perfect communications around the world and insures
continuation of world peace.

>> > > You are free to propose any changes you wish. Others already

>
>A reasonable stance.

Morsemanship is not a "stance." It shows dedication and commitment
to the amateur community, a vital necessity.

Morsemanship is a way of life.

>> > > You'd rather we continue mandating a skill test for a mode that

Yep - and we don't know if it will be a spike, or a bump, or whatever. Or even if it has much of an effect at all.

You are the keeper of the "poll." I say that there will be no siginificant spike in application numbers. In fact, I think you'll see the number of applicants for new licenses go down (first-time entry to the ARS--or entry from long expiration).

By the way, what of the "poll" for when CW would be eliminated from the arena of testing?

```

Please excuse my indignation, but "speech," in and of itself, is a very minimal aspect of phone operation. There are procedures--long held traditional procedures, as well as R&R procedures set forth by the FCC--that make phone operation an acquired skill if one is to be effective in ham radio.

That belief is not defensively mentioned, I truly believe it. I have actually witnessed poorly executed phone operation that netted in nothing when signals and conditions were optimal; it was just that the operating was so poor that no one was even slightly interested in return on such poor operating. And, then there's net conditions. Some people, but very few, come by net operation smoothly and without incident. But, for the majority, operating in a net condition, especially on HF is truly an art--every bit as much as CW operation in my opinion.

Exactly. And, I think anyone would--anyone who is serious about their desire, that is.

That is still not justification. If it were ability to send and receive,
then there are needed tests in many modes, not just CW. I don't need to
know a language with SSTV, either. In fact, I daresay I'd need less
language capability on SSTV than nearly any other mode.

Yep. I think it's the majority of the issue for them, and believe it will
be the demise of CW testing *in spite of* whatever we or the ARRL has to
say.

Absolutely. And, mind you...had it not been for the style of testing in
operation when I got my license, I would not be a ham today. And I *still*
think the tests (written) should be tougher, and unpublished.

Man, it took me nearly a year of listening...to all kinds of nets, before I felt confident enough to enter one and feel my presence would be seamless and without disruption. I was right, and felt at home once I keyed in and entered the net. And, not to give readers here the idea that nets are unfriendly--it was *me* that placed the demand upon myself not to be embarrassed the first few times, not a net or net control. Nets and good net controls are very patient and mentor wonderfully. To this day, the greatest fun I've ever had on HF was with MARS and being Net Control (even though that venue was more stressful to me than any other!)

For that matter, why would you need people in the cockpit at all?

This isn't as far fetched as it sounds. More than 25 years ago, the BART (transit) system in the SF area was designed to run without drivers. A lot of basic things were (re)learned at great expense in the process....

Most of today's radio communication systems are designed to work without radio operators. That's why MF CW on ships was replaced with the GMDRSS (or whatever it's called) system.

Initial assessments from monitoring groups and other observers indicates a record number of pirates, unlicensed broadcasters, & intruders took to the airwaves New Year's Eve and New Year's Day across the U.S.

Activity was observed on HF in the 6600-6900 khz range and 15 mhz band. Larger cities had four & five unlicensed Low Power FM stations going simultaneously. Some observers reported unlicensed activity even appearing in the AM broadcast band!

Brian, IMHO, what Steve does for a living is one hell of a noble occupation. Discuss, debate, or argue about ARS related stuff all you want, but I'd cut the man some slack wrt mentioning his job in a disrespectful light while doing so.

Quite possible.

By the way, what of the "poll" for when CW would be eliminated from the
arena of testing?

That was a pool, not a poll. I just updated it in its thread. So far four
predicted dates have passed.

You may just wind up being the winner of that one, Kim.

>than the fact that vacuum tubes or circular analog tuning dials were once
>popular justifies a requirement that they continue to be used.

There were never any test questions on circular analog tuning dials AFAIK. There used to be lots of test questions on tubes but they are almost all gone now - because most hams' rigs don't use tubes any more.

But the use of Morse Code in amateur radio is very popular. It's a big part of *today's* amateur radio, not just its past.

There are far more hams on the air today using Morse Code than hams using homebrew ham rigs. Yet we still test for theory knowledge even though most hams won't ever need to use most of it.

>Clearly,
>unless there is a valid reason otherwise, anyone should be free to use those
>if he or she wants, but there should be no government regulation mandating
>that. The same with Morse code.

Yet in order to get a ham license today, one must pass written tests containing many questions on solid-state electronics - even though there is no requirement to use that technology. A ham who wants to get on HF in the non-General parts of the bands using only vacuum-tube equipment still has to pass 3 tests full of questions on solid-state technologies, even though there is no mandate that s/he use those technologies.

>> Remember, we're talking about the 5-wpm
>> test, NOT 13 0r 20.

>
> The Amateur Radio Service does not exist in a vacuum, Bert. The FCC
>recently said "the emphasis on Morse code proficiency as a licensing
>requirement does not comport with the basis and purpose of the service."

The FCC also said that BPL was a step toward "broadband Nirvana". Heck, a
commissioner said that...

>They came to that conclusion after looking at modern communications systems
>outside Amateur Radio and the changes that have occurred in communications
>over the last fifty years.

Sure. Did anyone think they would contradict themselves?

>They noted that "no communication system has been
>designed in many years that depends on hand-keyed telegraphy or the ability
>to receive messages in Morse code by ear."

Has any communication system been designed in many years that depends
on *any* special radio operator skills?

>And they said reducing the
>emphasis on telegraphy proficiency as a licensing requirement would "allow
>the amateur service to, as it has in the past, attract technically inclined
>persons, particularly the youth of our country, and encourage them to learn
>and to prepare themselves in the areas where the United States needs
>expertise."

But that hasn't happened. Didn't happen after 1991, nor again after 2000.
>
>> You mean the second most popular mode
>> in use today doesn't rate as a valid test
>> requirement determinator. (snip)

> If you're going to argue that to justify a test requirement for the second
>most popular mode, why not argue the same for the third, forth, or even
>fifth, most popular modes?

Because none of those modes require learning specific new skills.

> By the way, where did you get the idea that CW was the second most popular
>mode? I agree that SSB is probably the most popular. But, given the sheer
>numbers of Technicians today and the fact that not all others use CW on a
>regular basis, certainly far more people use FM than CW today.

On amateur HF/MF, it's the second most popular mode. And a code test is only
needed
for amateur HF/MF.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
K3LT: September 15, 2004
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008

If I missed anybody, please add your guess to the list.

Given that ARRL likely will lobby for continuing a code test for Amateur Extra (12-13WPM?) applicants, I predict that Morse testing will not be eliminated in this decade.

While it's a cop out, it's probably the only way they can get 15 politicians to sign up for a "New Amateur Radio Plan" without a palace revolt on their hands at the BoD meeting. They'll be able to go back to East Overshoe, Iowa and Resume Speed, Arizona and mumble platitudes to their membership about how "We've opened HF to non-Morse applicants, but where it really counts we actually increased the Morse requirement."

That's my story and I'm sticking to it.

Today with the Internet with the World Wide Web, it seems pointless to bother with pirate broadcasting. If I had a message I wanted heard (or read) I'd set up a web page. If I wanted people to hear my garage band's music, I could upload the mp3s to that web page. The web page would be available 24/7 world wide. A pirate station will only have a very limited
range and time period, and most people interested in your material would miss it.

Add the fact that the pirate station is rather illegal, the web page would be the media of choice.

Come to think about it, in a sort of perverted way he's correct:
Georgie-girl Busch doesn't dare post in this newsgroup > under his
real name <. But he hasn't stopped TROLLing or flaming under dozens of
phoney nics and fake email addys in the three years I've been reading
and posting here.

Either way, he is "really 1 clueless TROLL" and thinks he's sooooo
clever! LOL!

But why did he snip my post? Because I pointed out that he had forged
posts as N8WWM? Intelligent people want the truth, Georgie, and not
just the truth as you want them to know it.

>seemed fitting that the time of their winter festival would also be
>the time to celebrate the birth of Christ. The darkness that had
>frightened and threatened to defeat the ancient pagans, was forever
>defeated by the coming of Christ."

Holey:

Yada, yada, yada. We know all about that. Whatever the geneology of the holiday, the reason that it is celebrated in present times is to commemorate the birth of Jesus Christ, the Lord and Saviour of all Christian peoples. Nothing will change that, not even any irrelevant facts about how the holiday came about. So, please be my guest and continue to be outraged when us Christians say that "Jesus is the reason for the season."

May the Peace of Our Lord and Savior Jesus Christ be with you now and always.

The NSA has amateur radio classified as an activity that could be abused by foreign nationals in espionage activities (prior to September 2001 - I'm not certain if this has been changed after that time).

> 2000. There is no need for further
> deemphasis. (snip)

I disagree. The reasons stated for reducing code (changes over last 50 years, no system dependant on code in many years, and so on) could just as easily be used to argue against a code test of any kind. In other words, how are those facts changed by a 5 wpm test instead of a 13 wpm test?

> (snip) Morse code/CW is unique and
> cannot be covered by the written tests.
> Actually (snip)

It is unique only in the level of emphasis placed on it. Without that emphasis, there would be no unique test for it. Which brings us right back where I started, pointing to what the FCC has said - "the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service."

>
> Nobody's forcing anybody to use it,
> just learn it...and only for HF privies.

Given another statement in your reply ("unique skill...decoded by the human brain"), that statement is rather illogical, isn't it? If the "skill" tested is the ability to decode code with the human brain, it would seem one would have to "use" that ability at some level just to pass the test.

> At 5-wpm, it's more a demonstration of
> discipline than proficiency. That is where
> the true crux lies.

The FCC doesn't have a mandate to test discipline. And, beyond the rules and good operating practices, we shouldn't expect it either. After all, we're not the military or a karate school.

> They've already reduced the emphasis by
> creating the no-code Technician ticket and
> further by reducing the required code
> speed for the General and Extra tickets.

As I told Dee, the reasons quoted in my earlier message for reducing code (changes over last 50 years, no system dependant on code in many years, and so on) could just as easily be used to argue against a code test of any kind. In other words, how are those facts changed by a 5 wpm test instead of a 13 wpm test?

351. Illegal CBers forging hams

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-05 05:17:49 UTC
From: Robert The Bruce <nevergeorge@kornet.com>
Message-ID: <btas1tfao1@news.x-echo.com>
Source record: 85027
Cross-posted to: rec.radio.cb,rec.radio.amateur.policy

For your information.

Illegal CBers are targeting random ham callsigns
such as WA3MOJ and forging them on Usenet
newsgroups. WA3MOJ is not now or has not ever
posted on Usenet but the forgers have an axe to
grind against anyone who complains about illegal
radio operation so they post callsigns of people
who they think are against them.

You may be next these cb outlaws will stop at
nothing including threats and harassment.

Attention All: the person posting as WA3MOJ@aol.com
is not wa3moj. Who is doing it is most likely tim nebo
aka Tim Nebout, a drug dealer and freebander from
LaMarque Texas who bootlegs on the 6 mhz aircraft
comm band and also on ham bands without a license.
If it is not Tim it is Steve Parks of Medina Ohio or Mark
Beck of Fremont California. Also a person known only
as "GW" aka Randall of Texas is doing the forging. And
there leader Twistedhed aka Dave McCampbell of
Clearmwater Florida encourages them and gives them
instructions on harassment of hams including using
their call signs on "freeband".

I understand Kim's point. Lets try it from this perspective. If you're one of the millions of immigrants entering this country, the speech we use on the radio, and on the radio tests, in this country is not already in the "toolbox." And Spanish certainly isn't in the "toolbox" of many other Hams in this country. So, even if you ignore any skills needed for the voice modes (however minor), there is still some validity in Kim's argument. Spanish is use more often the CW in this country (more popular), so perhaps we should test all operators on the ability to speak Spanish like we test for CW now. Or, since English is more common (popular) in this country today than Spanish, perhaps we should test all on the ability to speak English like we test for CW now. In other words, as Kim says, popularity alone is not a justification for a code test unless it is equally so for voice.

The FCC itself has already effectively provided that answer when they said "the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service." Clearly, the written tests do comport with the basis and purpose of the service, and I doubt many of us, including you, would disagree.

Amateur Radio Newslineï¿½ Report 1377 ï¿½ January 2, 2004

Amateur Radio Newsline report number 1377 with a release date of
Friday, January 2, 2004 to follow in 5-4-3-2-1.

The following is a QST. V-K hams welcome 2004 with new spectrum.
P-29 hams enter the new year with no-code and the FCC ends 2003
embracing smart radios. All this and more on Amateur Radio Newsline
report number 1377 for the first week of 2004 coming your way right
now.

(Billboard Cart Here)

**

RESTRUCTURING: EXCLUSIVE SPECTRUM DOWN UNDER

Hams in Australia start 2004 with an unexpected gift. Some exclusive
spectrum in the 75 meter band. From Brisbane here's Q-News Graham
Kemp, VK4BB, with the rest of the story:

--

As of January 1st amateur radio operators in Australia have gained
exclusive access to 24 kHz of HF spectrum at 3776-3800 kHz for high
frequency amateur radio communications between continents.

The new Australian spectrum allocation for the amateur service is made
under footnote AUS8 of the Australian Radiofrequency Spectrum Plan
2002 published by the ACA. It aligns well with international
arrangements, which means intercontinental communications for
Australian amateur radio operators will be improved at these
frequencies.

This domestic change has affected other spectrum users. More than 40
government bodies, community groups and commercial organizations were
previously licensed for HF communications within this 24 kHz of
spectrum, with amateur operators having lower priority access to 6
kHz.

For Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio
Newsline.

--

A very nice way to start the year 2004. (Q-News)

**

RESTRUCTURING: P29Z CALLS GIVEN HF GIFT

Australia is not the only nation in the Southern hemisphere to have some ham radio rules changes with the new year. A report out of Papua New Guinea says that the tiny nations has welcomed 2004 by going no-code.

According to Rick Warnett, P29KFS, in Port Morsby, the nations telecommunications regulator PANGTEL has issued an opinion confirming that P-N-G hams holding a Limited Amateur Operator's Certificate of Proficiency now have access to all High Frequency bands granted by PANGTEL. As a result, from 0000 P-N-G time on December 31st hams assigned P29Z series calls have full High Frequency access in the ham bands from 165 KHz thru 28MHz in addition to their 430 MHz to the multi Ghz allocation. (Q-News)

**

RESCUE RADIO: IRELAND PREPARES FOR POWER OUTAGES

Meantime on the other side of the world, what amounts to a mini Field Day exercise took place in Ireland December 6th and 7th. This when that nations ham radio rescue service known as AREN took part in a twenty-four hour simulated test to help prepare members for a possible power failure such as those experienced recently in the US and in the United Kingdom.

The test had several goals. Among them was to establish that AREN members could operate without mains power and to have members ready for activation during a sustained standby period. Also important was maintaining discipline by politely and firmly holding control of a working frequency for the duration of the exercise.

According to assessment reports, the AREN members demonstrated a keen and effective will to efficiently operate such a service. They also held the primary exercise frequency of 3.660 MHz without incident for the duration of the watch period. (IRTS)

**

RADIO LAW: S.C. INDICTMENT IN BPL RELATED SCHEME

Back here at home, it looks as if the first scam associated with Broadband over Powerline technology has surfaced. Amateur Radio Newsline's Jim Davis, W2JKD, tells us the who, the what, the why and the where:

--

News reports say that two Texas businessmen have been indicted on wire fraud and money laundering charges. This in a scheme that defrauded a South Carolina electric utility out of $1 million.

Prosecutors in Columbia, South Carolina say that the two convinced the utility to invest the money in research they said would allow voice,

video and data to be sent to homes and businesses through power lines. According to the documents filed on Thursday, December 18th, the could not deliver on the promises they had made.

Jim Davis, W2JKD, reporting.

--

No trial date has been announced in this case. (Published news reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Southern California Amateur Transmitting Society serving West Covina California.

**

THE CHANGING OF THE GUARD: Joe Knight, W5PDY, - S.K.

Some truly sad news to report. One of the nicest people ever to hold a ham radio license, Joe Knight, W5PDY, the recently retired New Mexico ARRL Section Manager, died on December 28th. Knight was in declining health when he passed away in Albuquerque at age 76.

For those not aware, Joe Knight held the honor of the longest tenure of any Section Manager in history. He was elected to the post in the mid 1970's and only stepped down last July after his health began to fail. In all he served as New Mexico Section Manager close to 27 years. A record never before matched.

Knight was the subject and chief narrator of an article, "The Luckiest Man Alive," which appeared in the January 2003 issue of QST Magazine. In it, Knight said that Amateur Radio will exist as long as there are people who love the art and science of communicating by radio. The article also outlined the vast emergency communication resources that Knight and hundreds of other dedicated volunteers built up over the years in New Mexico.

John Stuart, AC5ZO, the president of the Albuquerque DX Association, visited Knight on December 22nd. At that time Stuart presented Knight with an honorary membership certificate in that group.

Survivors include his wife, Lois, KC5CXO, who often accompanied Knight on his hamfest and convention visits and was a tireless recruiter for new ARRL members. (ARRL, W7AS, N7US, others)

**

CHANGING OF THE GUARD: Emmanuel G. Papandreas, W4SS, - S.K.

And former ARRL Southern Florida Section Emergency Coordinator, Emmanuel G. Papandreas, W4SS, of Lake Worth, passed away, Friday, December 26th at age 80. Manny as he was better was Southern Florida was SEC for 20 years. A record longer than any of his predecessors. And during his tenure, Papandreas oversaw the amateur emergency communications effort following Hurricane Andrew in 1992 including the staging area at the South Florida Fairgrounds in Palm Beach County.

W4SS was a life member of the West Palm Beach Amateur Radio Club and served numerous terms as President. He also taught amateur radio classes and was an ARRL Volunteer Examiner in Palm Beach county. And, over the years, W4SS was the recipient of many awards and honors from the South Florida agencies served by Amateur Radio. (WA4AW)

**

RADIO RULES: FCC OPENS SMART RADIO PROCEEDING

Turning to the regulatory scene, the FCC has adopted a Notice of Proposed Rulemaking and Order that sets out proposals and seeks comments on the uses and applications for "smart" radio systems. This, In light of the ever increasing demand for wireless transmitters.

Smart radios have the ability to adapt their use of spectrum to their environments. For example, a smart radio system could use geolocation and table lookups to determine whether certain frequencies are candidates for use in a particular area. Then, those frequencies could be scanned, idle spectrum identified, and the best frequencies and power levels selected for a particular link.

More is at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-242312A1.doc and http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-322A1.doc on the World-Wide-Web. (CGC, FCC)

**

ENFORCEMENT: YOU CAN FLY BUT YOU CAN'T USE THAT RADIO

The FCC has asked more groups representing hang glider enthusiasts to tell their members to stay off the ham bands unless they hold Amateur Radio licenses. The agency's Daryl Duckworth, N-N-Zero-W, has more details:

--

Audio report only. Hear it at www.arnewsline.org

--

Hang gliding zealots who fail to heed the FCC warning could face some pretty severe penalties. (FCC, RAIN)

**

ENFORCEMENT: COMPANY FINED $8,000 FOR FAILING TO PAINT TOWER CABLES

The FCC has issued an $8,000 fine against Tower Properties of Florida, Inc. for having unpainted cables attached to their tower structure. Cables that the regulatory agency says precluded good visibility of the orange and white aviation-painted structure.

Section 17.50 of the FCC's Rules provides that antenna structures such as this one that require painting will be cleaned or repainted as often as necessary to maintain good visibility. Further, as incorporated by reference, alternate bands of aviation orange and white are normally displayed on coaxial cable, conduits, and other cables attached to the face of a tower. (CGC, FCC)

**

COMMUNICATIONS LAW: JUDGE RULES ISP'S DO NOT HAVE TO PROVIDE INFO TO MUSIC INDUSTRY

Meantime, back here in the United States, a major setback for the music industry's anti-piracy campaign. This, a federal appeals rejects efforts by the music producers to compel the nation's Internet providers to identify subscribers accused of illegally distributing music on-line. Amateur Radio Newsline's Bruce Tennant, K6PZW, has more:

--

It happened on Friday December 19th and it's being called a substantial setback for the entertainment industry. This, as a three-judge panel from the U.S. Court of Appeals for the District of Columbia overturned a ruling by the trial judge to enforce a copyright subpoena.

Earlier a trial judge had authorized the use of the subpoenas forcing Verizon Communications Inc. to turn over names and addresses for at least four Internet subscribers. Verizon complied but instructed its lawyers to challenges the ruling.

In its decision, the appeals court not only sided with Verizon. It went a step further. This, by declaring one of the crucial arguments used by the Recording Industry Association of America to obtain the original order as -- quote -- bordering upon the silly. The judges words-- not ours.

What does this mean to those artists and companies wanting to protect their intellectual copyright? It won't stop the entertainment industry from suing those who continue to swap music and video files peer to peer, but it will make them a lot harder for the industry lawyers to locate.

From the entertainment capitol of the world, I'm Bruce Tennant, K6PZW, reporting for the Amateur Radio Newsline

--

Its not known if the recording industry plans to appeal this latest decision against it to the U-S Supreme court. (Published news reports)

**

ON THE AIR: IOTA 40TH ANNIVERSARY AWARD

Turning to operating events, Don Field, G3XTT, wants to remind Islands on the Air Award enthusiasts and would-be enthusiasts that 2004 marks the 49th anniversary of this unique program. Don says that a set of files for downloading with lots more information are now available on the Chiltern DX Club website at www.cdxc.org.uk Just follow the IOTA 2004 links and remember this years award began on January 1st. (RSGB)

**

HAMFESTS AND CONVENTIONS: HAMFAIR NY IN FEBRUARY

And a reminder that Sunday, February 29th is the annual Long Island Hamfair and Electronics Show Winterfest sponsored by the Long Island Mobile Amateur Radio Club. The doors open 9:00 AM for buyers. Admission is $6 with children 11 and under welcome through the gate for free.

The location is Levittown Hall in Hicksville, New York. Complete directions are available on the Long Island Mobile Amateur Radio Club website at www.limarc.org/fest.htm (LIMARC)

**

HAMVENTION 2004: AWARD NOMINATING PERIOD CLOSES JANUARY 31ST

And the planners of Hamvention 2004 want to remind everyone that the nominating period for the Radio Amateur of the Year, Technical Excellence and Special Achievement awards program closes on January 31st.

There are three awards that will be given this year. The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. He or she is a well rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

Documentation is required. Magazine articles, newsletters, newspaper clippings, videos, and the like will better inform the Awards Committee of your candidate's accomplishments.

The nomination deadline is January 31st, All materials become the property of the Hamvention and cannot be returned.

You can fill out the on-line form and attach documentation files at www.hamvention.org. Then click your mouse on the words award nominations. Printed nominations and documentation go to the Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

Again, the deadline for all nominations is Saturday, January 31st. (Hamvention)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM RADIO IN SPACE: ARISS UPDATE

According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on board the International Space Station does not have time to read messages from the ham public and he advises against sending any. We have more in this report:

--

In letters posted to the SAREX remailer, Frank Bauer, KA3HDO, indicates that ham radio is lucky that the crew has been able to fire up the new Kenwood packet radio system that was recently delivered to the space outpost. He also says that its not a good idea for hams to send personal e-mails to the astro-hams indicating that they are really to busy to read and answer them.

As to the new radio itself, Bauer says that the unit is a Kenwood D700 that has been modified to support up to 25 watts maximum output. Normally, if the crew has the system configured with the default settings. This means about 10 watts out which is medium power on the 700.

Regarding the packet frequencies and why split channels rather than simplex is used, Bauer says this. 145.80 MHz is designated a human spaceflight downlink frequency. Right now it shares use on voice and packet for general operations and school group contacts. In the future it will be used at times for voice, packet, repeater capabilities, school group contacts and S-S-T-V. Because of this, the

ARISS team would like to keep the downlink frequency clear for all to hear and receive. Therefore, packet simplex is use not a good idea on this frequency.

I'm Bill Pasternak, WA6ITF

--

Meantime, Miles Man, WF1F, has posted some photos of the new station on his MAREX website. The URL is: http://www.marex.org/hardware.kenwood.html (SAREX BBS, WF1F)

**

EMERGING TECHNOLOGY: RADIO BRINGS FASTER FAST FOOD

On the emerging technology front, fast food has gotten even faster in southern California thanks to the magic of radio. This as five McDonald's restaurants sign a deal with a communications company to allow motorists to zip through the drive-through line without having to stop and pay cash for their food.

The trick is utilizing the same technology that permits motorists to skip stops on toll roads. A transponder will emit a signal to a receiver at the food giant that will automatically calculate the food the fee. The motorist is then billed. The process is said to cut 15 seconds off the normal 131 second-wait for delivery at the payment window. (Technology Corner)

**

INTERNATIONAL-ARGENTINA: ANDES MOUNTAIN LAND CROSSING

From the international page, Carlos Beviglia, LU1BCE, says that between January 4 and 15th, the Radio Club Argentino will participate in the 6th Andes Mountains Land Crossing. LU1BCE is the Secretary of the Radio Club Argentino. He tells the Ohio Penn D-X newsletter that this trek is made every year to honor General San Martin and his army's crossing to Chile. This, during the American Independence War in 1817.

The Radio Club Argentino will provide the communication for the event. The club will set up two High Frequency stations at every camp point throughout the journey. Operation will be mainly on SSB and C-W using the special event call LS4M. QSL via LU4AA, either direct or via the bureau. (OPDX)

**

INTERNATIONAL-CANADA: MEET THE NEW RAC EXEC COMMITTEE

Meantime, to the North, word that Daniel Lamoureux VE2KA, has been elected as president of the Executive Committee of Radio Amateurs of Canada. This, for a 2004 through 2005 term. Also elected to the committee are First Vice President Robert Nash, VE3KZ; Vice President

of Regulatory Affairs James Deann, VE3IQ; Vice President Field Services and International Affairs Pierre Mainville, VA3PM, and Noel Marcil, VE2BR, as Secretary. (RAC)

**

INTRUDER WATCH: THOSE INDONESIANS AGAIN

On the Intruder Watch scene, we have some bad news and some good news. First the bad. VK6XW reports hearing 53 non ham stations on the 14 MHz band operating SSB. He says that most appear to be from Indonesia.

The good news? Word that another group of Indonesians who had been using 14.335 MHz have vanished and have not been found again. The same is true for the bunch on 14.252 which have also disappeared from the Amateur spectrum leaving only the 14.144 gang which have gone LSB and moved up to 14.145 Mhz. (Q-News)

**

SPECIAL EVENT: 50 YEARS A HAM

And you might call this one celebrating a personal best. This as Fort Wayne Indiana's Jack Forbing, K9LSB, takes to the air from March 1st to the 14th as K9L in celebration of his 50 years as a licensed operator.

Jack and his friends in the Hoosierland Amateur Mobile Systems group will operate all bands and all modes from K9LSB's home QTH. Equipment for the event will be a Yaesu FT-1000MP Mark V and a Yaesu FTV-1000 6 meter transverter into an yaggi at 65 feet. All other bands will use dipoles antennas. All QSL's go to K9LSB at his Callbook address. And we wish Jack a hearty well done on reaching this milestone in his ham radio career. (Via e-mail)

**

DX

In DX, 9V1DX, is now active as 9V0A from Ellsworth Mountain in Antarctica. He was spotted in 40 and 30 meters CW. Watch 7.001 or 10.108 MHz between 01:30 and 03:00 UTC. (OPDX)

And W4WX, will be active as KG4DX from Guantanamo Bay, Cuba, from January 13th to the 19th. He will operate the HF bands and 6 meters. QSL to his home call, direct with SASE. (OPDX)

Lastly, AP2JZB, was active recently from Pakistan on 17 and 12 meters SSB . Watch around 18.119 and 24.946 MHz between 13:30 and 15:00 U-T-C. QSL as directed on the air. (OPDX)

**

THAT FINAL ITEM: HAM RADIO HISTORY -- THE FIRST BIG REPEATER MEETING - PART I

And finally this week, many hams are not aware that back in the early 1970's repeater growth and continued experimentation in ham radio relay communication came to a screeching halt. This, as the result of overly restrictive regulations on the part of the FCC.

As most radio amateurs of that era knew, this was not a good time to be the owner of a repeater unless you also held an Electronics Engineering degree. Things had to change if F-M and repeaters were to grow again. In the end, one man risked it all to make it happen.

On January 24, 1974 then 73 Magazine publisher Wayne Green, W2NSD, brought a group of prominent "repeater people" before the FCC. He had arranged the meeting in an attempt to convince the Commissioners to roll back the restrictions put in place as a result of Docket 18803. Here's a sample of what that meeting sounded like:

--
Meeting audio sample
--

Want to hear more? Well, over the next several months you can take a trip back in time to join Wayne Green, W2NSD, former Colorado's Marshal Quiat, AG0X, New York's Howard Lester W2ODC and Dick McKay, K6VGP, from California. This, as they and others go to Washington D-C -- to -- quite literaly -- set repeaters free.

Part 1 of the audio of that meeting is on our website as a Newsline Extra. In it you will meet the hams who traveled to Washington to speak on behalf of the nations FM and repeater community. You will also hear some of the presentations made by them. Its on line now at our f-t-p site at www.arnewsline.org slash quincy.

This is literally a page out of ham radio's history. Its here -- right now for you -- exclusively -- on the Amateur Radio Newsline. (ARNewesline(tm))

SPECIAL ANNOUBCEMENT TO ALL RADIO AMATEURS FRM Hamventionï¿½ 2004

Press Release
(January 2, 2003)

For more information please send e-mail to: media@hamvention.org

Hamventionï¿½ Award Nominations Close January 31st

Do you know an outstanding amateur in your club, community, or from on-the-air contacts? Does this person appear to excel in some phase of amateur radio? Do you feel that he/she deserves national and world-wide recognition? If so, then the time is now for you to sit down and write a letter to nominate that special radio amateur for one of three Hamventionï¿½ 2004 awards.

There are three categories of awards being presented: The Radio Amateur of the Year, Technical Excellence and Special Achievement Award.

The Radio Amateur of the Year is described as that special person who has made a long term commitment to the advancement of amateur radio. A well-rounded individual who has contributed most of his or her lifetime to our hobby in some very outstanding way.

A nominee for the Technical Excellence award should be a person who has made an outstanding technical advancement in the field of amateur radio. Something like a revolutionary new equipment design or mode of operation that has impacted positively on the day to day operation of many hams.

Last but by no means least, a nominee for the Hamvention's Special Achievement award is the kind of special person who has made an outstanding contribution to the advancement of amateur radio. This award is usually given to a respected amateur who spearheaded a single significant project.

All amateurs are eligible - Novice through Extra. Recipients are decided by the Awards Committee, based partially upon the information received, not the number of nominations submitted. The decision of the judges is final.

Nominations must be received before midnight on January 31, 2004. Documentation is not only beneficial, but essential in determining viability of a candidate's achievement(s). Magazine articles,

newsletters, newspaper clippings, videos, etc. will better inform the Awards Committee of your candidate's accomplishments. All materials become the property of the Hamvention and cannot be returned. Submissions go by mail to: Awards Committee, Hamvention 2004, PO Box 964, Dayton Ohio, 45401.

(Note: You can also fill out the on-line "Nominating Form" found at the Hamventionï¿½ 2004 website (http://www.hamvention.org) by clicking your mouse on the words "Award Nominations," but you are still required to submit substantiating documentation to the address noted above before January 31, 2004)

The issue is a government requirement, not test questions.

Have already done so elsewhere (in a reply to Mike Coslo, I believe).

How do you know that to be a fact? With some training in electronics,
radio, computers, and so on, I consider myself somewhat technically inclined
and I probably would have never gotten a license if the code tests remained
for all licenses. Are you so very certain I'm the only one?

LMAO!!! Now you forgot to cross
post this to the correct groups George Busch
wa3moj@aol.com
You see this is what has been trolling
RRCB for over three years now. It's not
that he is a ham, no that isn't the problem,
but a troll with a ham license extra class.

Um George, you forgot to cross post this so that your
peers can see how an extra class ham acts when they go bad
and start acting like a troll.

Yes, they do. That's what the "character" stuff in the rules is about.

There's a local ham around here who has generated so much trouble on various repeaters and earned himself so many warning letters that FCC is considering not renewing his license for "character" reasons. IOW he simply doesn't have the necessary self-discipline to be a ham.

>And, beyond the rules
>and good operating practices, we shouldn't expect it either.

Agreed. But those things do constitute "discipline".

Because we have not seen any significant changes
to the technology used by hams in all that time that
came from hams who aren't code tested.

>With some training in electronics,
>radio, computers, and so on, I consider myself somewhat technically inclined
>and I probably would have never gotten a license if the code tests remained
>for all licenses. Are you so very certain I'm the only one?

Not at all.

But with all due respect, Dwight - how "technically inclined" are you?
Build any homebrew rigs? Any new modes or technologies? Any
technical articles in amateur radio publications?

Please understand, there's no requirement that you or any ham do any of those
things. But what difference does it make how "technically inclined" a ham is if

they don't do any of them?

>> But they're qualified to have a learner's permit for 10 years.
>
>Do you have aproblem with 10 years? Should we make it 10 weeks?

I have a problem with the idea that someone who can pass the test for the
learner's permit and who has a clean record is pushed off the amateur bands
because he/she can't or won't pass the exam for the full-privileges license. I
can see making the LP nonrenewable and requiring a retest to get another one,

but not being banned for life as your plan would do.
>
>> Can you name any other license where, if you don't upgrade within a
>> specified time, you lose the license you have?
>
>There are no such amateur licenses extant, but for the majority of
>it's availability the Novice license was exactly like that.

Actually just about half its existence.

But that feature ended almost 30 years ago. I've been told I'm "clinging to the past" because I think code tests are a good idea...

Are there any licenses or learner's permits of *any* kind currently issued by the US Govt. that are one-time-only, upgrade-or-you're-out?

>That was
>probably the most effective method ever devised of introducing
>non-amateurs to ham radio with a "sample sized" operating permit.
>Easy to get, with limited power so you didn't trash the
>RF-neighborhood too badly, and of a duration long enough to decide if
>you wanted to become a ham and to gain experience for the
>qualification tests.

And they limited it to a few slices of a few bands. And for most of its existence it was CW only. ;-)

> Then they spoiled it by making it renewable.

Which was done because of the perception that too many newcomers were dropping out.

There's another option. Make it nonrenewable but "retakeable", just like other LP's. If someone reached the end of their 10 years and wanted to remain a ham, but couldn't pass the full-privs test, they could take the then-current LP test and get another LP. Just like for a driver's license. That way, no one who was interested would be forced off the air, but at the same time there would be incentive to get a full-privs renewable license. And FCC would not have to maintain a database of folks banned from ever getting an LP.

Then you have the unenviable task of convincing FCC that the current General
and Tech exams don't adequately test for the knowledge required to safely
operate 1500 watt amateur transmitters.

I've read the rules many times, but must have missed the part or parts about character testing.

> There's a local ham around here who

First, what does that have to do with testing? Second, there is nothing in the rules about refusing a renewal based on character, so I seriously doubt that would be the FCC's explination for any action like this (a pattern of rule violations, yes).

> Agreed. But those things do constitute
> "discipline".

Only if you stretch the word to mean something beyond common usage.

> in all that time that came from hams who
> aren't code tested.

Of course not. Radio is a mature technology, so you're not likely to see
"significant" changes in the future. But that doesn't suggest for a moment
that there are no contributions at all being made. With several hundred
thousand hams out there, neither of us are likely to know what contributions
are being made.

> But with all due respect, Dwight - how
> "technically inclined" are you? Build any
> homebrew rigs? Any new modes or
> technologies? Any technical articles in
> amateur radio publications?

Are these what determines who is technically inclined? If so, I doubt 99%
of the operators today, in any license class, could be described that way. I
use modern radio equipment, far beyond what could be built easily at home.
New modes were rare even before any changes to the code tests and may be
even more rare in the future. And new technologies will obviously be small
in a mature industry. As for my own activities, I'll refrain beyond saying
I've built some lessor equipment at home, written some articles, and helped
to establish policies for the use of amateur equipment within a national
organization.

That isn't my point, Dan. That wasn't a good signal W1AW was putting
out, and it was making a mess out of the local neighborhood. Usually PSK
and OOK Morse get along just fine.

My point is that by coming out with a ratty signal, W1AW was doing what
so many hams were complaining about K1MAN does. Fire it up, and too bad
for the rest of you.

That and wondering what a CW signal Bandwidth was in the first place.

If, after 10 years as a learner and exposed to mainstream ham radio they can't qualify for a standard license, then another 10 years isn't likely to be sufficient to become qualified.

I can't imagine "one who was interested" would fail to qualify in 10 years, but if they didn't, well I guess there are other hobbies like finger painting which might be less challenging and not require a federal license to pursue. The liberals will whine and wring their hands in dismay, but life's a bitch sometimes.

They wouldn't be 'banned for life'. They could take the standard
qualification test at any time.

> Are there any licenses or learner's permits of *any* kind currently issued
by

None that I'm aware are currently extant, but precedent exists.

> > > simplify the overall license structure.

But why is there such a need? Retaining closed-off license classes
like the Advanced and Novice simply requires that a certain field in
the FCC database have more alternatives and the retention of a few
paragraphs of Part 97 listing privs of those licenses.

Back in the days before electronic data, FCC kept the closed-off
Advanced class as a separate entity for more than a decade even though
it carried no additional privileges.
> >

> win that same argument...i.e. you can't take privileges
> from me because the new requirements aren't justified
> since I already had those privileges via a lower class

> license?

Two reasons:

1) The 1968 situation involved existing hams *losing* privs, not getting a free upgrade.

2) What is proposed, if I read it correctly, is a one-time giveaway, not a rules change.

The closest thing to it historically isn't 1968 but instead it's the Great Giveaway of 1953, when FCC completely reversed its restructuring of 1951 and opened all privs to all hams except Novices and Techs.

And I'll ask again - why is there a need to eliminate the closed-off license classes? Tech Plus will disappear automatically no later than 6 years, 3 months and 10 days from now. Novice is down by about a third and Advanced is slowly decreasing as well. What harm do these old classes do?

Mike, Mike, my boy, you just don't understand.

The ARRL is kind of like that "Home on the Range" song... where never
is heard a discouraging word, and the skies are not cloudy all day.

Don't be sayin nuttin bad bout the ARRL, nor their flagship broadcast
station W1AW. You'll get the wrath of the Old Man himself when you
get up to the Pearly Gates.

From the ARRL License Manual 1976:

CW Bandwidth = wpm X 4
"With proper shaping, the necessary keying bandwidth is equal to 4
times the speed in words per minute for International Morse Code;
e.g. at 25 words per minute, the bandwidth is approximately 100 cycles.
e.g., 40 WPM = approximately 160 Hz"

I thought I replied to this post, but maybe not. I think that Digital voice takes up more BW than SSB, so there will probably be a wait for future developments.

Probably. Ham/Internet functions would probably be a lot better than what they are now, and people like me, that don't think that the Internat is Ham radio would not have time to form their biases.

> I am positive that CW would be rediscovered and resurrected by those

I agree about the CW. That would probably come about as a minimalist thing, kind of like QRP is now, but with extremely simple equipment.

I don't think that RTTY would come about. I think amateurs got started on RTTY after getting surplus writers. There probably wouldn't be many of them left today. And the encoding scheme wouldn't likely be adopted

However, truly outmoded forms of

Several years ago ARRL marketed a WIN3.xx software package called "Radio Designer" which was a 'lite' copy of a commercial RF design program. Unfortunately the program does not run under 16- and 32-bit Windows environments, and the OEM is not interested in entering into further arrangements with ARRL.

Does anyone know of a similar program in a price range (under $500) attractive to hams?

The company that made ARRL Designer (Compact Software) was bought by Ansoft.
They have greatly enhanced the capability, and the current offering is
available as a free student version here:
http://www.ansoft.com/ansoftdesignersv/
There are also many other evaluation & student packages available on the net
for free. Check out this site as a starter:
http://www.rfengineer.cc/rftools.htm

Also, if you do an internet search on "RF circuit analysis software" or
something similar, you'll get lots of hits.

BTW, I run ARRL Designer under Win98SE and it's fine. What OS are you trying
to use it with?

Joe,

Thanks for all the resources. At my house ARRL Designer pukes and dies on
both WIN98 (500MHz P2) and WIN-XP (2.5GHz P-4) machines.

Hans,

ARRL's Radio Designer Version 1.5 (copyrighted 1998) claims that it runs on both Windows 9x amd NT systems, and I can confirm empirically that it operates on Win XP Pro as well - an excerpt from the included Help file is below:

" ARRL Radio Designer 1.5, a Windows (3.1, 3.11, 95 and NT)-based computer program, lets you create computerized models of audio, radio and electronic circuits so you can see how they work--and make them work better--without actually building them....."

IIRC correctly, the last version sold by the ARRL was 1.51. If you are using an older version, perhaps you can find a copy of this one somewhere? Was originally $150, should be a copy at a fraction of that out there now that it is discontinued.......

True, but maybe one of the roles of the 'new' amateur service would be
to serve as a testbed for new technologies like this one. With all of
the new licensees concentrating on playing around with it, and no old
low-tech stuff to impede them :), improvements may come more quickly
than in our current scenario.

Make that one 'us' - I don't consider any Internet-linked radio system
to be a 'real' radio - more like a telephone, at best. But, you are
absolutely correct, this bias of ours would not exist at all! Folks
who grew up in the age of the 'Net may see the new Radio service as an
extension of it.

I was thinking more of those folks who had been monitoring some of the
commercial RTTY utility broadcasts (like the Canadian Army's aviation
forecasts out of Halifax, NS at a blistering 75 Baud, for example),
and who would want to try it out for themselves. With a PC, encoding
schemes are relatively simple to create and play around with - maybe
some nut would do it just to see if they could? (Maybe even this
nut..... :))

>hmmmm. not sure if I like that!

Me either - concepts like this scare the heck out of me. But, the
potential for some unsavoury character or terrorist to acquire a radio
with the capability to communicate globally (and stealthily - pretty
hard to find one, especially if it transmits on a random schedule!!)
and use it for whatever nefarious purpose may prompt the government
who created the 'new' amateur service to build this in right from the
start. It's very technically possible, and cheap and practical if
done en masse right from the beginning. (after all, who ever thought
that an innocuous little computer in your car could be used to produce
data to nail you in court over an accident?? Hmmmm. That wasn't in the
Owners Manual....)

Included as a discussion point......we'll see if anyone else shares
this view / concern.

Thanks Leo,

Mine is the original version 1.0 and it doesn't run in Win98 or Win-XP Pro
or Win-XP Home.

I'll see if I can root out a copy of 1.5.

Does the ARRL License Manual of 1976 address Farnsworth code and bandwidth?

Irrelevant. Morse code is the entire foundation for amateur radio.

Morse code is cutting-edge technology, an advancement necessary to use the HF spectrum for communications.

Morse code gets through when nothing else will, thus proving that morse code modes do away with electrical power requirements.

All who are "interested in radio" are required to learn morse code and be licensed in the amateur radio service. Non-morse modes do not count as "interest." Non-amateur work does not count as "interest." Professional work in radio does not count as "interest."

Learning morse code shows the self-discipline, dedication, and commitment to the amateur community and the League.

I have been told this. I repeat it to you for the betterment of all.

>Advanced material.

Sorry, the entirety of the Tech is totally irrelevant and irreverent...they are not tested for morse code proficiency.

Morse code is the living heart of amateur radio. Only "real" hams have been code-tested.

Without morse code testing, all new amateur licenses are Given Away!

There's no such thing as "reciprocity" in here, Brian, only
recedetive retribution spouted from the drool-dribbled hot keyboards
of the mad-as-hell-because-all-the-others-don't-mind-talking-back-to
a high-level ex-NCO who is an amateur extra.

Anyone not getting along with mighty Stebe will - guaranteed - be
treated to a mighty melange of vitriol and personal insults...about
their life, their wife, their occupation, their accomplishments, plus
defamatory remarks of their choices, abilities, and for just existing.

But, in Egbert's view, all that is part of the hamgame? All must
condone the actions of a macho psycho extra who once passed
a 20 WPM code test and answered enough questions correctly to
receive a federal merit badge (suitable for framing). So, all extras
have absolutely carte blanche permission to act as assholes off
the radio and never be able to play well with others.

Yes, all must "cut him slack." Nursing is a heroic occupation and,
like W1AW, none can do wrong ever, anyplace. Just like an Efren
Salizar and another (recently) in the east.

Cut him "slack?" No. That makes all who do slackers.

If any individual hears "bad signals" on W1AW frequency, it is
obviously a fault of the individual's receiver/antenna/ears/imagination.
W1AW and ARRL can do no wrong.

Zero cost ought to be attractive? :-)

Linear Technology Corporation has a free download version of their

LTspice / SwitcherCAD III at

http://www.linear.com

This is a standard SPICE plus the addition of switching power supply section (using Linear's PSU ICs of course). The SPICE part runs the same as everyone else's SPICE which has been optimized for speed of execution.

Mine runs fine on a Windows 98 platform...as well as the Windows XP on my wife's H-P machine.

The SPICE core is total freeware and that was Pedersen's request at Berkeley. Other folks have taken the free core and established their own Windows menus, pop-downs, and output formatting; that part is individually copyrighted...like copyrighting fancy wrapping paper for a present. :-)

"Radio Designer" has a SPICE core.

There are several SPICE "lite" versions available for free as demos, all with "limited" component count, number of nodes, etc., etc. Those limitations do not hinder a complex several-transistor plus several standard IC circuit combination analysis. You can even get freebie CDs in the mail on request of these demo versions. I have such as well as the SPICE core source code in both C and FORTRAN.

If you are only interested in frequency-domain circuit analysis and want an on-screen simulation circuit control (add, delete, insert, modify values) along with some macromodels within, I can send you my (formerly) shareware version of LINEA. LINEA is DOS-level, looks monochrome, is not attractive in looks but the answers are

on-the-money out to double precision. At DOS level operation, it is relatively immune to Windows versions' differences; LINEA was originally written on a Spectra 70 mainframe and eventually ported to a PC running Windows 3.1 at DOS level. LINEA is very small as program packages go, roughly 150 K...pretty cosmetics take up many megabytes.

Stebe once passed a 20 WPM code test, answered enough questions
correct on an exam, received his federal merit badge certification
(suitable for framing) and became an amateur extra.

That gives him absolute permission to behave as an asshole off the
radio. No problem. :-)

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008

Closest date (before or after) wins. Anyone else?

Sorry if I wasn't clear. They'd be "banned for life" from getting another learner's permit...err, Class B license. FCC or somebody would have to keep a database of everyone who had held one and let it expire without upgrading, to insure that someone wouldn't retest and get a second one.

>> Are there any licenses or learner's permits of *any* kind currently issued
>> by the US Govt. that are one-time-only, upgrade-or-you're-out?
>
>None that I'm aware are currently extant, but precedent exists.

Sure - a precedent that ended almost 30 years ago. Maybe FCC will go for that idea but I doubt it.

btw, the old nonrenewable nonretakeable Novice had one more limitation back in those days: it was for newbies only. Anyone who had *ever* held any class of amateur license, even one that had long since expired, could not get a Novice. It had to be a person's first ham license.

Of course back then FCC trusted that when someone checked the box on the Form 610 that said they' never had a ham license before, they weren't fibbing.

>about character testing.

FCC reserves the right to deny a license to someone who has passed the tests *if* FCC determines that said person cannot be trusted to follow the rules. In practice this means that someone convicted of a crime (usually a felony) can be denied a ham license, particularly if the crime was a violation of the Communications Act.

For example, some years back a ham went to jail for hacking into computers (he wrote a book about it in prison, btw). Ham radio had nothing to do with his crimes
but FCC did some serious consideration of not renewing his license. I think he finally convinced them that he was rehabilitated and trustworthy enough to have a license.

>> There's a local ham around here who

>
> First, what does that have to do with testing?

It has to do with discipline and responsibility. Even though this guy could pass the tests again, his renewal may be denied.

>Second, there is nothing in
>the rules about refusing a renewal based on character, so I seriously doubt
>that would be the FCC's explination for any action like this (a pattern of
>rule violations, yes).

We discussed the "character" issue in its own thread some time back. K2ASP gave some good insights. A person who can't seem to follow the rules *can* be denied a renewal based on what FCC calls "character".

Don't take my word for it - ask Phil and/or google up the old thread. I recall the C-word was in the thread title.
>
>> Agreed. But those things do constitute
>> "discipline".

Are you sure the W1AW signal was dirty? An overloaded receiver or soundcard
will do exaclty what you describe.

That doesn't mean it's impossible that W1AW had a problem, just that all things
need to be checked out. Have you listened to W1AW since then?

>Usually PSK and OOK Morse get along just fine.

Depends on who's doing what. 3579 used to be a popular "glowbug" frequency for
Morse folks using simple rigs and a colorburst crystal. Then the freq was taken
over by PSK-31 due to the popularity of the "Warbler".
>
> My point is that by coming out with a ratty signal, W1AW was doing

W1AW transmits bulletins and code practice on a published schedule, and is on
every HF amateur band simultaneously. Been doing that for almost 70 years now.
However, the signal should be clean.

Didja email them? Even that "professional" Harris stuff can go wacko.

Sure, what you say makes perfect logic for all the rich little white
kids whose mommy & daddy buy them the latest hottest
computer. For the kids in the ghetto who have only boom
boxes, the pirate-unlicensed station with a DJ who speaks their
language, IS their world. In fact, a good portion of unlicensed
FM is found in the inner cities.

bandwidth?

The Farnsworth approach isn't even used for faster code speeds like 40wpm so it is a moot point. However the calculation method would be to use the character speed as the parameter in the calculation not the "effective word speed" that is created by increasing the space between characters.

No more than FCC or somebody kept a similar database to prevent ex-licensees from glomming onto a Novice permit back in the 1950's. A false application today is just as unlikely as a false application 50 years ago, and I suspect the penalties are similar.

And why bother --- after 10 years of experience, the standard exam would be a laugher.

I'll never say never, but I don't think it was too likely. I tried a
number of things with the RTTY party last weekend, and even though there
were lots of strong, wide signals, the few psk signals on at the same
time were no problem to copy. And the other people on the air had to be
suffering the same malfunction I might have been.

Well, I thought about it, but after the reaction of a number of people
here that I think know more about the suject than I do, I would imagine
they would write it off to pilot error.

Reply-To: donotreply@prodigy.net

Hello,

This is a WARNING NOTICE from the SBC Internet Services (SBCIS) Policy department, regarding abusive, offensive and/or harassing emails/postings sent from your SBCIS account.

It has been brought to our attention that you are posting on the internet newsgroups with a known AOL user as you're account information RE:
wa3moj@aol.com
Said individual has forwarded a complaint concerning these posts.

Be advised it is a violation of our Terms of Service (http://sbc.yahoo.com/terms/)and Acceptable Use Policy (http://support.sbcglobal.net/legal/aup.shtml) to use our service to email or post, threatening, abusive, obscene, hateful, or otherwise objectionable material.

If additional complaints are received concerning your SBCIS account, it will be TERMINATED, and you may incur an early termination fee.

Sincerely,
The SBCIS Policy Department

Enjoy!
Landshark

There lise the BIG problem with this peoposal. There will be some
people that will test the principle, that's for sure.

LOL. Yep, if the goal is indeed to test character, there is something clearly wrong with the process.

Good grief, Jim. Again, what does this have to do with code testing? This
has no relationship to anything being discussed.

Wow! See what happens when you edit a sentence without checking it afterwards. That last sentence should read "Spanish is used" and "more often than CW."

On Contraire, Brain...I have never "dissed" your occupation.

I HAVE "dissed" your numerous assertions of accomplishments that
you've refused to back up with any evidence. That is your fault.

I HAVE thanked you for your service in the Armed Forces. Several
times.

In fact, I don't even know what you do for a current career.
Whatever it is, I am sure you do it well.

Very true. You have hit the nail on the head this time. Everything
that was good about amateur radio was morse code and the trained pool
of not only morsemen as you like to put it but also technically
trained people too. Amateur Radio as a service is gone. It is only
self serving now. Not a service but a high priced hobby. After all, it
is called the Amateur Radio Service. We do not have a right to our
allocated frequencies. We only use them by the grace of the FCC. So
LHA, your tounge in cheek comments ring very true indeed.

Unfortunately, I believe I have heard the story of which Jim speaks...or at
least one exactly like it. In fact, it seems to me that it was related to
the renewal of....hmmm, was it that Herb Schoen...something-or-other down in
the Carribean somewhere? Whatever license renewal denial it was, it was due
to character and that was the words of the FCC.

I think that's most unfortunate and don't agree with the practice at all. Bust someone for R&R, etc., but the FCC--nor anyone and certainly not a government--should be able to deny something because of "character."

> Radio Service.

First, you're obviously confused about the word "service." In FCC terminology, "service" refers to a group of frequencies meant to serve a particular purpose for the users of those frequencies, not anything done by the users of those frequencies. As a result, we have the Amateur Radio Service, Radio Broadcast Services, Cable TV Relay Service, Maritime Service, Personal Radio Services, Citizens Band Radio Service, Fixed Microwave Services, and so on through a long list of other radio services. In other words, the word "service" in Amateur Radio Service does not refer to any "service" we might provide to others.

Second, you're completely wrong about "service" being gone within the Amateur Radio community. Based on what I've seen, I'd estimate as much as 75% of the current operators are involved in some form of public service related activity in any given year. Of course, the need for our help is high, meaning even more should become involved, but that hardly suggests the idea of service is gone today.

The newsgroups "rec.radio.shortwave" and "rec.radio.cb" were deleted from this reply (off-topic in those newsgroups).

Get the foul mouthed red necked yahoos off of HF and I'll consider wasting
my time to learn CW to meet and exceed your criteria.

A better demonstration of discipline would be if CW trained amateurs would
stop using HF like it was 11 meters.

Uhhhhh....nope.

And unfortunately for you, your lies ARE archived in this very
forum.

Sucks to be you, Leonard.

> The ONLY way one can be "interested in radio" is to get a ham
> license and be proficient in morse code...(SNIP)

Oh geeze...Here we go again.

Lennie, we're STILL waiting on you to cite the quotes wherein
you've established this opinion.

It's certainly not true in MY case, and just one more example of
how you feel free to take liberties with the truth.

> ....with extra gold stars
> if one was once a member of da murine corpse. Doesn't hurt if

And still more silliness.

I never claimed to be an engineer...But I did provide numerous
references from that job that proved you WRONG on numerous occassions.
I guess that had to hurt, knowing a "non-engineer" had access to
references that took a bite out of your rants...

> Amateur radio FUN is only "ancilliary" to the U.S. amateur radio
> SERVICE. Ham radio is all about wearing a Lifestyle mental
> uniform, marching in ranks to the morse drumbeat of the 1930s,

> emergency? That's the thoughts I see expressed in here.

Again with the "1930's" rant, Lennie?

And in any case your sleight's against Amateur Radio's PROVEN
track record of being able to provide the very emergency services you
claim as "ineffectual" or "irrelevent" are DISproven over and ovr,
even in the 21st Century.

> There can be no fun in the ham SERVICE. It is all about duty,

There's no "hatred" of the "pros", Lennie. Only PROlific liars
such as yourself. That you claim to have been a "radio" professional
is unfortuante.

> It's a wonderful life.

Yes, it is. Too bad you'll die having not known exactly HOW
wonderful it is.

> Merry Christmas and Happy Holidays, Brian, all the best to you
> and your family.

At least there was ONE person in this forum for you to exchange
greetings with. Good for you. No one should be alone for the
holidays. Even creeps like you, Lennie.

It has to be me! 8^)

I've done enough post testing on this to be pretty sure that it isn't
me though.

The Waterfall screen in Digipan functions pretty nicely as a poor man's
analyzer. The signal was putting "crap" all over the place.

I wasn't the only person who noticed the problem.

I was not able to duplicate anything like the problem with the RTTY
contest, which had many strong signals, and should have been worse if my
reciever was overloading. I'm impressed with how nicely the old 745
performs.

The problem - whatever it was - was in the W1AW signal.

A major reason that the FCC doesn't restrict power level per license level
(other than novice) is that it is hard to enforce. Unless you visit and
inspect
the ham's station, how do you tell if that strong signal is due to excessive
power, or is it a beam pointed in your direction? Privilages based on
frequency is easy to enforce, all the FCC needs to do is listen to your
signal and note the frequency you're found on. Not that it takes extra
knowledge to operate on 14.160 vs 14.318 MHz.

LOL! A Morse key might be a very ironic prize, depending on who won. I suppose if I won a key I would have to have my first CW QSO, after 24 years QRV!

I suspect that for Farnsworth - just use the character speed - not the overall speed with extended spacing.

Mike,

It seems to me that the bandwidth calculations given for CW are based
on 'true' CW - that is, carrier on / off operation.

I wonder if W1AW pre-records their CW material in audio format, then
broadcasts it as a modulated SSB signal - would that not stretch the
signal bandwidth out considerably?

Anyone know if this might be the case?

There was a whole thread devoted to the issue. Would you believe it
was almost 4 years ago?

Here's a link to a post by K2ASP that explains it much better than I
can:

http://groups.google.com/groups?selm=cuvyxnarpbzzynjpragrepbz.fuiqyo4.pminews%40ca.news.ve
rio.net&oe=UTF-8&output=gplain

> In fact, it seems to me that it was related to

> the Carribean somewhere?

The issues surrounding
He-Whose-Name-Or-Call-Must-Not-Be-Mentioned-Lest-You-Be-Spammed is
dealt with in that post.

> Whatever license renewal denial it was, it was due
> to character and that was the words of the FCC.

They are *required* to use certain words because that's how the law
works. Here's the relevant part of the Communications Act:

"Comm Act Sect. 308(b)
All applications for station licenses, or
modifications or renewals thereof, shall set
forth such facts as the Commission by regulation
may prescribe as to the citizenship, character,
and financial, technical and other qualifications
of the applicant to operate the station;....

The Commission, at any time after the filing of
such original application and during the term of
any such license, may require from an applicant or
licensee further written statements of fact to
enable it to determine whether such original
application should be granted or denied or such
license revoked. Such application and/or such
statement of fact shall be signed by the applicant
and/or licensee in any manner or form, including
by electronic means, as the Commission may
prescribe by regulation."
>
> I think that's most unfortunate and don't agree with the practice at all.
> Bust someone for R&R, etc., but the FCC--nor anyone and certainly not a
> government--should be able to deny something because of "character."

Then get Congress to change the Communications Act. FCC is *required*
to
do it. Your definition of "character" is probably quite different from
FCC's, but when you're in front of The Judge, guess which definition
will
get used?

One principle that some hams seem to not understand is that we are required to comply with *all* of the Communications Act, not just Part 97 rules. *Any* violation of the Communications Act can have ham license consequences. IOW, just because something isn't specifically prohibited by Part 97 doesn't mean it's OK for hams to do.
A violation of the Communications Act is, by definition, a violation of
FCC R&R.

In fact it goes even farther. The Congress has specifically prohibited people in arrears of child support from getting *any* Federal benefit. That includes licenses. While I don't know of any actual enforcement actions, a law does exist to revoke a 'deadbeat' parent's ham license.

If you don't like it, Kim, get The Congress to change it. Good luck ;-)

I hate to say it, Jim, but this is one of those intangibles that fall under
the catagory of "if you don't get it, I can't explain it to you."

Kim's got it, but doesn't like it. I can respect that. Bill's got it too,
but doesn't appear to want to let on that he's got it. (Broken record mode:
But the FCC..., but the FCC..., but the FCC...) Dwight? No comment.

I think people had more respect for the FCC and its R&R back then,
Hans. Just IMHO.

And i'm not "insisting" on it, just pointing out some of the possible
problems. I think the best solution might be to have it nonrenewable,
but if someone *really* wants another one, they can take the exam
again after the first one expires. Just a thought.

That's what I thought back in 1968. I was amazed that there was so
much
moaning and groaning and complaining from *experienced* hams about
having to take another license test......

Service means just that. Broadcasters have to do public service to
keep broadcastings. Why do you think they do PSA's. No money involved,
they do it free. Amateur operators operate uder the same subset of
rules. If they don't provide a public service when called they have no
reason for being. You also would have to prove that 75% of the
amareurs provide a public service. Lets see, chasing DX, rag chewing
with Barny down the road and checking the weather outside. Yep, thats

sure public service-----NOT!

Some might object to having to take and pay for another test. esp if
they are qrp operators.

Yes, I can see where that would be an almost insurmountable problem among
cheapskate hams. After all, it works out to
$0.00273972602739726027397260273972602739726 per day for the term of the license.
That's a HUGE number!

I hear you. I have several older (DOS) comm programs which puke on
faster machines - good ol' PCPLUS for one. That's why my 24/7 packet
circuit (for the local ARES/RACES group) runs on a separate (166
P1) machine - it slows down my Athlon XP 2000 and my P2 machines.

I'm trying to find a DOS emulator for Linux to see if I can run two
circuits at once now...,..

A version of F6FBB is available which runs native on Linux, using the
Linux AX.25 networking support code. There ought to be no problem
running multiple TNCs (either real ones in KISS mode on serial ports,
or soundmodem versions), doing digipeating, etc. on Linux.

It seems unlikely that the FCC would increase the requirement for code. The medical wavier issue would pop up again, and they don't want to be bothered. Also, what of all those "extra lites" issued since restructuring day? At this point, it's a sure bet that the FCC will never increase the code speed.

Some might have to take off from work to take the test. Some may have to drive long distances to take it. I drove 70 miles each way for my Tech license, and 150 each way for my General, I took the Element 1 in my home town, and my Extra in a town 50 miles away, because they were on dates that I could get away.

That's about as long ago since I did a CW QSO. :-)

Let's see, several petitions were submitted a few months ago, and the
comment
periods are now closed. So it's probably sitting on some brearucrat's
desk right
now. Or at the bottom of the pile on one or more commissioners' desks,
to be
looked at when there's nothing better to do. And they'll spend a few
minutes
looking at the restructuring R&O, find the part about code kept only because
of the treaty, note that the teaty has changed, delete the code
requirement, and
publish it in the federal register. Then it takes force 4 months later.
So it cannot
take place before May 2004 (date it takes force, "when Morse code
testing will
be eliminated in the US"). Add a few more months for the brearucracy, so
I say "August 1, 2004"

Phil,

Don't know if it will help, but how about this:
http://www.dosemu.org/
I have no idea if it will help or not; I'm thinking of putting Linux in one of the boxes. A Google search of 'DOS emulators for Linux' yielded a ton of hits, but you've likely already researched them.

Yes, but that's not how it's done.
>
>Anyone know if this might be the case?

Here's how it was when I visited in 1993:

The W1AW main transmitters are Harris transceivers and amplifiers, all computer
controlled from a master console in the little building out in front of Hq.
Bulletin and code practice texts are sent over the network from the
headquarters building and the local computer keys all the rigs simultaneously.
(Text-to-Morse conversion is done in the local computer).

Of course a faulty command from the computer, a bad cable or problem in one of
the "professional grade" rigs could wreak all kinds of havoc.

But they don't feed audio into the rigs for Morse or RTTY.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008

Closest date (before or after) wins. Anyone else?

I doubt very much that the Commissioners read individual comments on
ham radio issues like that. If my guess is right, one or two staffers have
to read all of them and come up with what they think is the best solution
for all concerned.

>And they'll spend a few minutes
>looking at the restructuring R&O, find the part about code kept only because

>requirement, and
>publish it in the federal register.

Maybe. They could also change their minds based on any number of factors.
Or simply use the petitions to formulate an NPRM.

> Then it takes force 4 months later.

Unless we go through a whole NPRM cycle.

As Hans said, I doubt that very much! At the very least they'd have someone a few miles away listen in.

And they have a spare rig for just such situations, too.

I wouldn't be surprised if someone *did* let them know, and it got fixed right away.

Sure enough! But.... Lenover21 is right about one thing.

From Lenover21:
>>> Anything said against YOUR PLAN is worthless, illogical,
>>>inconsequential, irresponsible, irrelevant, etc., etc., etc.

Back to me:

If I were a qrp'er, I would surely be peeved under the circumstances.
Heck if I were to be happy with 50 Watts power, I probably wouldn't be
too happy about the situation, having to retest or lose my license.

Perhaps it would be better if everyone were to just tell you that the
plan was the best thing they ever saw?

I think Kim's complaint is valid. Jim obviously has some issue with her callsign. Without saying why, he refuses to use her callsign as he has done with everyone else on his list. That callsign was issued by the FCC and, if Jim has an issue with that, he should take it up with the FCC. Regardless, until the FCC says otherwise, that callsign is legitimate and should be treated as such by all within the Ham radio community - just as any ham operator, including Jim, would expect his or her own callsign to be treated.

Okay, I'll try one more time. Please read back over what I've said. Nothing was said by me about a denial of license based on other grounds. We were talking about license testing and everything I said had to do with license testing. What does Jim's story have to do with license testing? Instead, not able to respond to the actual question raised (character testing within the license tests), Jim has deceitfully, but clearly successfully, introduced another subject (denial of license) to undermine my earlier statements about license testing.

> No comment.

Excuse me, Bert. Before you continue discussing whether I "get" something or not, read back over what I've actually said and notice that absolutely none of it had anything whatsoever to do with the separate issue raised by Jim. We were talking about license testing. My comments had to do with license testing. Jim changed the subject to license denial based on other grounds. I've made no comments on that subject.

Nonsense. What public service is performed by those in the Citizens Band Radio Service? Or the Family Radio Service? Or what public service, especially free public service, is provided by the radio services used by business, commerce, or industry?

After reading that, it is obvious you have no intent to honestly discuss the issue. And, since I have no desire to provide you with an opportunity to spread misinformation, I will refrain from further comment.

The newsgroups "rec.radio.shortwave" and "rec.radio.cb" were again deleted from this reply (off-topic in those newsgroups).

Well sir, you perhaps need to do a little research so you can discuss
this subject. I do see you are well educated but the comments from you
are not entirely correct. The 3 above mentioned groups PAY for their
priviledge. Check the rules. Broadcasters have to do public service as
do hams when called. My last comment on this subject as you will
believe what you will. Kinda figures. A fairly new TECH class ham with

all the answers. Come back 30 years from now and we will talk then. Of course you will still have that TECH that came out of a corn flakes box. Not a real Amateur ticket.

Hans is not the one professing to be the ex-professional author
and "radio professional", Brain.

If you're going to "brag" on some personal characteristic or past
achievement of your life, you should be ready to stand behind it.

Your "mentor" has made a point of insisting on what a
"professional" he is in both electronics and publishing. I think his
conduct herein belies his real character.

Clear enough for you?

Steve, K4YZ

>What does Jim's story have to do with license testing?

Simple.

It shows that the FCC has very wide authority to set license test criteria, including
such concepts as "character" and "discipline". Merely passing the tests is not the only requirement for a license grant.

Normally the FCC assumes that all applicants for a ham license are "of good character" unless there is a reason to suspect differently.

I think FCC could indeed legally implement Hans' one-shot learner license with its upgrade-or-out provision. Their argument would be that someone who was a ham for 10 years and yet c/wouldn't pass the full-privs test simply didn't have the required "character" or "discipline" to stay in the ARS.

Actually, all of the above are in the same line of work: show business.
"Professional" athletes are in show business, same as movie stars or
singers or TV personalities.

While I don't agree with their enormous paychecks, such things are the
inevitable result of any system that is even close to a free market.

>None of
>these people contribute to the general well being
>of society on a day to day basis like the
>engineers, technicians etc. who design and repair
>the products that are taken for granted.

It's all in the perception of the people who pay the bills. Lots of people
enjoy movies, sports events, etc., and are willing to pay for it.

Next time you're in Best Buy or wherever, take a look at music CD prices
and realize that the actual cost of manufacturing the CD is a dollar or less.

What about them, Brain? I pointed out that your "duties" were
in an MOS that was well known as far back as 1957.

I never said anything disrespectful about the character of your
service in the USAF or your duties.

Perhaps you can produce the quote wherein I did?

I'll play a bit of "Devil's Advocate" here, Dwight...There are
some very well respected REACT teams utilizing GMRS which is,
unfortunately, "Citizen's Band". (ie: Crest REACT in SoCal)

They are far and few between, however, and many of the more
functional REACT Teams have blended Amateur Radio into their teams.

He is, at the very least, predisposed to trying to disparge the
Amateur Service.

Facts undermine his attack, however.

Nice, Dwight. Very touchy-feely and politically correct.

I'm certain that Jim has an issue with Kim's call. Quite a number of us
have issues with Kim's call. Even Riley Hollingsworth has issues with
Kim's call. For you to attempt the equation of Kim's tacky choice of
vanity call with Jim's non-vanity call is ludicrous.

You'll note that I used "further reflect on your character". The
touching up of another's post is one issue. The choice of calls is
another.

I don't think you can really separate them in this instance. We all know why Jim doesn't want to use her call, but at the same time I doubt if any of us would be pleased to appear on a list where everyone else had their call listed but we didn't. The obvious implication is that the person with no call is not a ham, even though we know that's not what Jim meant.

You might not choose to have a call like Kim's, but can you honestly say you wouldn't correct someone's post if they did this to you? As for the lack of an accompanying comment, have you considered that she might not be able to think of anything that wouldn't actually be worse than no comment? If she can't think of anything good to say, she may be being polite by saying nothing.

Nice try, Jim, but that wouldn't be their argument at all.

Their argument would be that the individual had not yet demonstrated knowledge of the technical qualifications for a standard license by passing the required written examination, and their learners permit had expired. It has nothing to do with "character" or "discipline".

Nonsense. It would be virtually impossible to test character or discipline in a radio license test. The FCC hasn't done it and probably wouldn't ever attempt to do so. Nice talking to you, Jim.

No Dwight, I will not excuse you. The discussion I was engaged in w/Bill,
K2UNK, concerned the "character" aspect of Morse code testing. (i.e.
demonstrating self-discipline by studying for and passing Element 1 for
increased privileges, regardless whether one plans on actually using CW OTA
or not.)

As for discussing whether or not you "get it," again...no comment. No
comment means no comment. You were only included because you were one of
three that commented re. the subject. I do notice that this is not the first
(or tenth, for that matter) time you've joined into a thread, (or a branch
thereof) pulled the subject in a different direction, and then whined about
a response by claiming that what you said had nothing to do with a
"separate" issue. Well Dwight, the above is the issue that Bill, JEP, Kim,
Jim, and I were discussing. Get it yet?

And the efforts of REACT and its members are commendable. However, any public service performed is informal in nature, not the result of any regulatory stipulation imposed by the FCC or federal government. There is nothing in part 95 that mandates public service like that found in part 97.

> He is, at the very least, predisposed to

But he obviously has no desire to listen to, or accept, facts. Therefore, an ongoing exchange simply isn't worthwhile, and may be counterproductive if it provides him with a medium to rant against this radio service. Instead, I'll wait for something worthwhile to respond to, such as an argument that may be taken seriously by others.

Ah good ones -- some more "Great Ham Whoppers"
I only own one radio!!
Ur 599 (ur call again please).
Your QSL is in the Mail
I'll Never Build Another Kit Project

I bought my mint TS-950SDX for $300.00.
I worked em on the first call.
I never worked DX on a net!!

After a long boring QSO:
XYL says dinner is ready.
Just got the ____ call.
We're losing propagation (wiggle the RF Pwr control)
QRM Now -- Better Sign while we can!
OOpps -- there's the doorbell
Gotta land line OM -- 73
OOppss Rover!!! Gotta run and empty the dog!!
Oh shoot, lightning in the area, gota shut down!
XYL says time to take my pills. Gota go!
Time for the local repeater net, Gota go!

I am just running a few watts, opps there goes the circuit breaker.
I usually copy code around 40 wpm but have an ear infection so using phone
now.
Love code but had my Vibroplex stolen so have to use phone.

No, just civil, polite, manners, Dave. My mother wasn't thinking of political correctness when she taught me to try to respect others, even if they may not deserve it. Sadly, too many people today consider polite manners to be an unwelcomed human attribute, now described as political correctness by those people.

Regardless, the agency that Hollingsworth works for, and that issued the other callsigns on Jim's list, does equate the validity of Kim's callsign to Jim's. Some may wish to dismiss that, but doing so perhaps says a lot about their own character.

The facts are this: If amateur radio had to justify it's frequency allocations based only on public service communications (Part 97, SubPart E), then we'd be QRT on most of our frequencies by midnight tonight.

The amateur radio service, the citizens (band) radio service, the GMRS, the FRS, the broadcast radio service, and etc., all exist and are allocated frequencies so long as PICON says they do. PICON is a lot more than just "public service", and further it is dynamic so any given services "favor" under PICON is subject to spectrum market forces, and is influenced most strongly by the "I" and "N" in PICON. As a hypothetical example, if Tom Ridge decided he needs ("N") some HF spectrum to communicate with air marshalls, 50KHz each of 75, 40, 30, and 20 meters could disappear from 97.301 in the blink of an eye.

Thus endeth the lesson.

Good ones ..... how about ....

Hey I just got my ticket ....your VEC group testing time didn't fit into my schedule so I drove 300 miles and "passed"

To the person above .....you can borrow my key since you learned 5 WPM overnight .... naa don't have time for CW .....

The band is always "open" here .....

I can't pass the code test because of my hearing .....

My wife says I can put up that 100 foot tower but ....

Boy I'd love to help you guys but I have something going on this weekend ....

Nobody wants to do anything for this club ....meanwhile this joker has done crap for years save bitch about everything ....

Gee I'd really like to have that ----as I have been looking for one of those for years ...meanwhile your "good buddy" has cut a deal with a fellow cross town who wants one but doesn't want to miss out on a "score".

To the widow ..... Ya know Mrs. RF your husband was such a good guy and he told me that you should only talk to me about getting rid of the "shack". Don't laugh '''this HAS happened at funeral homes ......

To the grieving widow ..... Ya know Mrs. RF that you can't get parts for that old stuff any more ... I'll give you a few bucks and then give the radios to the scouts they can take them apart for a merit badge project ....

It only "cuts out" now and then ....

AND NOW FOR THE GRANDDADDY OF WHOPPERS .... drum roll .....

CW always gets through ....

God Bless 73 KI3R Tom Popovic Belle Vernon Pa.

Of course (he said, humoring the mentally ill)...when any disaster
strikes, all the communications infrastructure fails but amateurs can
jump in and save the day. Using morse code, of course.

[try "slight" and "over"...]

> There's no "hatred" of the "pros", Lennie. Only PROlific liars
>such as yourself. That you claim to have been a "radio" professional
>is unfortuante.

Not a "claim," an actual fact...provable through several third-party
sources. You keep trying to say I never worked in the electronics
industry at all. I did. In aerospace since 1956. Got paid for it.

Try to get used to the FACT that I was employed on a regular basis with several electronic corporations in southern California and did retire from regular hours' work. Try to get used to the FACT that my single patent grant is on radio. Try to get used to the FACT that I was doing big-leagues HF radio communication before you were born. Try to get used to the FACT that HF communications has hardly changed in the last half century. Try to get used to the FACT that I have far more technical knowledge of radio and electronics in general than you have now.

Or, reject all the facts, ignore reality, and say everything I've written is "lies." That doesn't make your statement "true." It never will.

>> It's a wonderful life.
>
> Yes, it is. Too bad you'll die having not known exactly HOW
>wonderful it is.

Perhaps. I'm not complaining. Why are you complaining?

I had to sit with the family gathering again to watch "It's A Wonderful Life." :-) After seeing it so many times, it's still a good motion picture even if very dated.

>> Merry Christmas and Happy Holidays, Brian, all the best to you
>> and your family.
>
> At least there was ONE person in this forum for you to exchange
>greetings with. Good for you. No one should be alone for the
>holidays. Even creeps like you, Lennie.

Hardly "alone" during the Holidays. Wasn't even here (physically). An inconvenience to access another's computer to check e-mail, even if a close relative.

Why do you insist on painting all those imaginary scenarios, trying to denigrate others?

I don't live in newsgroups nor do I look to the computer to give me either acceptance or love or respect. Never thought that way since getting on BBSs the first time 19 years ago. Computer-modem communications are just another form of communications...just like radio. You haven't reached that point in understanding this medium yet...you can holler incessantly that I "lie" and vomit all sorts of bad names but none of that is "true" anywhere but in your head.

So far you've not been able to "force" me to do anything, not even with vague "threats" of some sort of veiled physical harm. Acting the bully in here only demonstrates what bullies do. This isn't a "personal battleground" that must be totally occupied by your personal perceived slights/insults/whatever...yet you keep on with that sort of thing. Ho hum. Boring to most readers. Doesn't work, can never work...except in the fantasyland withing your head.

Try to remember that you are NOT some high-rank NCO and that
this is NOT some kind of military service. Playing the Dill Sergeant
won't get you out of any pickle you make by your own words.

No one in this newsgroup is allowed to maintain a civil debate.

It should be a fact of life in this venue that morse code testing is a vital necessity to show the strength of character to the Amateur Community. Has nothing to do with federal regulations. It is all about mindset and flights of fantasy.

Not only are you incorrect but also (still) anonymous.

>The 3 above mentioned groups PAY for their
>priviledge. Check the rules.

Which three groups? Broadcasters do NOT "pay for any priviledge [sic]."
Broadcasters exist by selling air time for profit.

Amateur radio, by definition, is a radio activity NOT engaged in for
pecuniary reasons.

>Broadcasters have to do public service as
>do hams when called.

Nope. The regulations are quite different.

>My last comment on this subject as you will
>believe what you will. Kinda figures. A fairly new TECH class ham with
>all the answers. Come back 30 years from now and we will talk then.

Oh, my, the "experienced" olde-tyme hamme...who remains
anonymous.

I was first licensed 47 years ago...in commercial radio. I was in
military radio (big leagues, not piddly mobile things) over 50
years ago. Do you have the entire 5-volume set of Title 47 C.F.R.
at your disposal? Do you have bookshelves to put them on?
Does your bookshelf have protection from the rain (like having a
real roof overhead)?

>Of
>course you will still have that TECH that came out of a corn flakes
>box. Not a real Amateur ticket.

Oh, no...don't say it...you got Extra on a whim because two CBers
dared you and paid you $250 if you passed, right? :-)

We will call you Broose Two.

>Service means just that.

No. All throughout Title 47 C.F.R., the word "service" is a regulatory
term denoting a type and kind of radio activity.

>Broadcasters have to do public service to
>keep broadcastings.

It's the law.

>Why do you think they do PSA's. No money involved,
>they do it free.

Yes, in the wee small hours when their air rates are absolutely lowest.

>Amateur operators operate uder the same subset of
>rules.

Incorrect. Contact the FCC and have them explain the different radio services and which Parts are applicable to their radio service. Copies of all Parts are available free for download from the US Government Printing Office website (through a link at the FCC webpage).

>If they don't provide a public service when called they have no
>reason for being.

Look up the Radio Control Radio Service in Part 95, Title 47 C.F.R.

Absolutely NO "public service" required there...yet the R-Cers lobbied for and got a whole band of frequencies just for them.

>You also would have to prove that 75% of the
>amareurs provide a public service.

They do by maintaining a national pool of trained radio operators, aka Morsemen. This is a vital, necessary public service to save the world when aliens invade from outer space, disasters incapacitate all the emergency service infrastructure (only CW can work under such conditions), and when time machines are invented to transport all morsemen back to 1917 or 1943 and win foreign wars.

>There were no outrages when Hans just called someone an a-hole.

It's "noblesse oblige" oriented, Brian. The "upper classes" and
royalty get to swear, vomit profanities, demean and denigrate the
lower classes because they all passed 20 WPM code tests.

It's the blue blood of the ruling amateurs. If you don't admire and
love and cherish their noble accomplishments, they turn blue and
use blue language. None others may do the same to them.

Maybe not blue, it's more like they are inviolate.

Stebe gets all red in the face and insists all are green with envy
for not being able to "radiate RF at great power" somehow
allowed to him alone. He's not yellow, doesn't shirk from trying
(vainly) to defend himself when he pales on thinking he's been
insulted.

Of course, any former E-5 or higher that thinks "asshole" is a
terribly profane word must be of the sissy pink coloring.

It's a gray area...

If Jim does not want to use Kim's callsign, he doesn't have to.I don't have a problem with it, but some people do. Even so, if she wishes to change the post, she should not put it in as if Jim posted it.

> Jim obviously has some issue with her

If I were in this situation, I would post a polite note with my callsign, and not post it as if Jim did the posting. I know until I

looked back up at the from area on the screen, I though it was from Jim.

I dobt any of us wants our posts altered. We could eventually get like the crazies thaat post here from tim to time.

Do you really think I ever said you were out to lunch?. If I disagree with portions of you plan, that's a big part of why we're here; I've pointed out what I don't like (and even some parts I thought were okay).....Wow, I'm a thoroughgoing bastard, eh!

Your responses have been belittling and insulting for the most part. If statements like "lifes a bitch..." and "that's a novel idea" as a synonym for stupid and definition games are the best supporting arguments you can make for your proposal, it isn't going to go too far.

Sobeit!

Well, Tom, there you go. Don't forget those two additional 32-bit processors too. Color and the 2 additional processors cost an additional six grand. But wait a minute--Icom's soon-to-come-lately 7800 has fewer roofing filters and one less band stacking register per band. I also like my real analog meter better than a digital simulation.

Drop by sometime. I'm only 35 miles west of Waynesburg.

It certainly is.

> Kim is apparently trying to make a point about Jim. That's her right.

Not by making the material look as if it is a quote of what Jim wrote,
it isn't.

> Never mind that they both remind me of the 'church lady', and I think > that they and you are acting like sanctimonious twits. That's my right.

Under no circumstances could Kim remind me of the "Church Lady". As to
the sanctimonious twit reference: Is it your week to do the Walter
Matthau "Grumpy Old Men" role?

I believe that's the beauty of the Orion, it's never "ancient." The latest upgrade is just a download away. I feel for the poor slob who finally breaks down and buys a '7800 just before the '7800 Pro or Pro II comes out.

Maybe not.
>
> Their argument would be that the individual had not yet demonstrated
> knowledge of the technical qualifications for a standard license by passing
> the required written examination, and their learners permit had expired.

Perhaps.

Or maybe they'd use both arguments.

But said individual *had* demonstrated knowledge of the technical
qualifications for the privileges of the "learner's" license by
passing
the required examination, yet those privileges are revoked if the
learner doesn't learn fast enough.

While there is a precedent from over a quarter century ago, I think it
would be a hard sell to FCC. But perhaps I'm mistaken about that.

Even though I don't agree with every detail, I really do think you
should write it up and send it to FCC as a proposal (rather than a
comment) like those other 14 petitioners.

--

Back in the days of the one-shot Novice, a prospective ham could go
straight to Technician, General or Conditional. After 1967, the first
step
could be all the way to Advanced. And a certain number of new hams did
just
that, getting full privileges "right out of the box", as it were. Your
plan
would not allow that - every new ham would have to go the 'learner
license' route for at least two years. Some 'liberals' might wail and

wring
their hands about "hazing rituals" and "underclass", etc.

As you so succintly wrote in another post: "Boo hoo".

> It has nothing to do with "character" or "discipline".

Sure it does. With your plan, if someone doesn't have the "character"
or "discipline" to upgrade within the 8 year window, they're out of
the ARS until they do.

Most Amateur radio operators act and behave as if they are the progeny
of first cousins. Pocket protector, HT strapped to their belt and very
large belly. So large in fact that they haven't seen their pekker in
years.

Point is, FCC has a wide latitude as far as testing and license requirements goes. You may not like the concept but The Congress does.

Didja know that in 1940 FCC required all US hams to either sign a loyalty oath or turn in their licenses? While not exactly a "character test", you can bet that some hams' backgrounds were checked.

Such things seemed far-fetched a few years ago. Not any more.

Free Advice

No strings attached

Absolutely FREE

Call Ten-Tec and have 'em ship you an Orion. If you don't fall in love
with it within the first thirty days, return it for a full refund (less
shipping charges). You can buy a fancy new four-wheeler with the extra
change you'd spend on the '7800.

hmmmm. you must have run into a few of the rednecks because a lot of us
aren't this way at all.

Me, I wear blue jeans, button down shirts (many styles and colors to
choose from) and sneakers or boots most of the time.

I was a bit overweight for a while (bad diet) but that is going away to
the tune of 10 lbs. a month (thank you Dr. Atkins!). Regular exercise
doesn't hurt either.

now... about your opinion. perhaps you should relegate it to a much
narrower forum? its an over-generalization that makes you look foolish.

Mike, how in the Hell is anyone going to alter a post to make it appear like someone else's, when the post is listed as "Sent" by whomever it is that actually sent it? The "art" of making it look like someone else had sent it would only be evidenced as deviant behavior IF (and I did not) I had also changed the Header information to look like it had been sent by Jim.

That Dave Heil is so damned bored with life that he has to concoct things from thin air is usual and status quo for him. Don't be so quick to jump on a Dave Heil bandwagon...because those wagons don't travel far at all.

For anyone with computer sense, it is unreasonable to even consider that a post could be issued under the guise of someone else--contrary to the opinion that it can be done. And, when I resubmit "The Pool" list with my callsign attributed to my prediction date, it is certainly weak, at best, to display anger and make it seem as though I was doing *anything* else but resubmitting a post an attributing my callsign to my prediction.

However, if you or anyone else, is so desperate to reach for the stars in some display of dislike for me--then go for it.

Here's an update on various estimates of when Morse code testing will be
eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
W5TIT: June 1, 2008

Closest date (before or after) wins. Anyone else?

73 de Jim, N2EY

WAIT...oh, I was going to change this to show that it is posted from Kim
Walker but, oh my gosh look! It says "From Kim Walker" in the list and,
gosh, let me check now--yep, that pesky little Header has my Yahoo email
address *just like always* and, why just look at that, it even has the same
routing information as always.

It's obvious up front, surely, to anyone not *searching* for the sake of
disagreement and dislike, that this is from anyone but Jim/N2EY. And, it's
obvious, since *I posted to him once and asked him to include my callsign,*
that I am simply adding my callsign to the list. And, of course it's
obvious, right up front from the "From" line, then by further investigation
(if some stupido really needed to go further) into the Header, that this was
sent by someone other than Jim/N2EY.

So, I guess I will no longer have to even bother with those who can't see
the obvious.

Oh, yeah: Kim W5TIT

No sweat, Dwight. Only the very petty folks will nitpick about minor
spelling errors or grammatical misuses on USENET. (Usually in an
attempt to compensate for the invalidity of their own statements.)

Simply going in and changing what someone else wrote without
changing the > symbols is misattribution and one of the very few
things that are almost universally condemned on Usenet. Headers
simply tell what the number of > symbols means.

Of course it was all probably just a small mistake but I thought you'd
want to know.

> were discussing. Get it yet?

However, I wasn't discussing anything with Bill, Jep, Kim, or you. I responded to something Jim had said and we had exchanged several messages on that subject (with the subject clearly stated).

> I do notice that this is not the first
> (or tenth, for that matter) time you've
> joined into a thread, (or a branch
> thereof) pulled the subject in a

> about a response by claiming that
> what you said had nothing to do
> with a "separate" issue.

In case you haven't noticed, the subject you're discussing isn't the subject listed in the subject line of this thread. The subject you're discussing spun off from that original discussion, as the subject Jim and I were discussing spun off from yours. That's fairly typical of newsgroup discussions. Therefore, I think it's fairly important to know what is being discussed before making comments, especially comments about the participants (not the subject, but the participants - you said, "Kim's got it, (snip) Bill's got it too, (snip) Dwight No comment."). Enough said.

It's a matter of opinion, Bert. From my perspective, it is nonsense. Of course, it doesn't become so just because I say it. Others, including you, are obviously free to have a different opinion.

Okay, Dee, show me where I said Amateurs "must" do public service. Part 97 offers that as one purpose of the ARS and gives us the mandate (authority) to do so (ARES and so on), but it certainly isn't required.

Of course not. But do you concur with attempts to alter the perception of a person's status as a Ham by blatantly omitting that person's callsign in a list containing only the callsigns of others? Jim is aware of what he's doing. Kim had already asked him to include her callsign (a request which should have been unnecessary).

Nope.

It's the standard YOU have tried to set, Scummy. YOU are the one
stating "we" (the Amateur community) don't respect
"professionals"...yet here you are spewing antgonisms, profanities and
boldface lies.

So, there you go.

> Stebe gets all red in the face and insists all are green with envy
> for not being able to "radiate RF at great power" somehow
> allowed to him alone. He's not yellow, doesn't shirk from trying
> (vainly) to defend himself when he pales on thinking he's been
> insulted.

On contraire again, Lennie...I get to radiate more than adequate
"great power". I hardly ever use more than 200 watts on ANY band,
however, since it's not necessary to use it.

Of course, unlike YOU, I have a station license that allows me to
establish a radio station wherein I can use it.

> Of course, any former E-5 or higher that thinks "asshole" is a
> terribly profane word must be of the sissy pink coloring.

Blatant evidence that you are not in touch with the "new"
professional Armed Forces, Lennie. That kind of language, although
rampant in your day, can get a prefessional soldier busted or fined.

Of course WE knew that, since all of your references to the Armed
Forces start off "Back in 1953 at ADA..."...

> It's a gray area...

Nothing "gray" about it, Lennie. YOU keep trying to foist
yourself off as a professional, both as an author and as an engineer,
but YOUR conduct and YOUR language lend a different example.

Sucks to be you, I'd say...

Quotes, Lennie...Cite the message thread, please (I have learned
to not trust ANYthing you say unless I can cross-reference it to a
third party source)

> > Lennie, we're STILL waiting on you to cite the quotes wherein
> >you've established this opinion.
>
> Observation of the human condition for over a half century.
>
> What's your excuse?

Once again you avoid the request to prove your assertions with
some sort of facts.

And so far, your "observations" are just bitter rants against
just about anything that you can't/weren't able to understand or
master yourself.

That's not "proof", unless just being a loser is your goal, in
which case I'd say you have excelled.

> > It's certainly not true in MY case, and just one more example of
> >how you feel free to take liberties with the truth.
>

There's only one "role-player" here, Lennie. Almost everyone
else here HAS an Amateur Radio license and PARTICIPATES in teh "Real
McCoy".

YOU are the outsider here.

> > I never claimed to be an engineer...But I did provide numerous
> >references from that job that proved you WRONG on numerous occassions.
>
> Never once did you "prove" anything. Your imagination tells only
> you that you were "right." Your imagination is WRONG.

Sure I did. Starting with simple assertions about the
"engineering community"...You said that there was "no such thing" and
I provided you with an immediate quote from one of the periodicals
that cited that very concept.

And you further went on to say "real engineers" didn't need/use
Amateur Radio...I gave you the callsigns of not only 13 engineers, but
three of them were PhD's.

> > I guess that had to hurt, knowing a "non-engineer" had access to
> >references that took a bite out of your rants...
>
> "Hurt?" Only my sides from laughing. "References" from a weekly
> newspaper from Podunk Hollow, TN, hardly counts for anything...

They were hardly from "Podunk Hollow", Lennie. They were
professional journals and periodicals.

(Squirm a bit harder, Scummy...)

> > Again with the "1930's" rant, Lennie?
>
> Call it "transistorized 1930s," Stebe.

I call it your "1930's rant", Lennie...It's not truthful, nor
even representitive of anything associated with MODERN Amateur Radio.

> Standards and Practices remain the same as 70 years ago.
> Imagination of Public Service and self-serving glory are still the
> same. If ARRL writes it, all MUST believe, for their words are

I never said you "never" worked in electronics, Your Lyingness.

>>I<< said you never amounted to anything more than a very
determined bench technician. I have complimented your cut-and-paste
skills, however.

> Or, reject all the facts, ignore reality, and say everything I've written
> is "lies." That doesn't make your statement "true." It never will.

Long list of "FACTS" snipped.

The FACT is that I have spoken with people who KNEW you and wee
not impressed.

The FACT is that YOU refuse to accept that your "professional"
and military "experience" is NOT Amateur Radio.

This forum is about AMATEUR RADIO.

You have yet to demonstrate an even rudimentary understanding of
what it is, let alone have participated in it.

The FACT is that YOU have been caught in NUMEROUS fabrications or
misrepresentations of truth and "called" on them over and over.

YOU have no credibility herein as a result of that, Sir Putzy.

And (I've said this before) it's just peachy with me that you
know more about electronics than I do or ever did, Lennie...Being able
to quote Shannon's Law in your sleep is irrelevent here.

> >> It's a wonderful life.

facts are that there are still thousands of pages of archived RRAP
fodder wherein you've been caught with your britches down over and
over.

> So far you've not been able to "force" me to do anything, not even
> with vague "threats" of some sort of veiled physical harm. Acting
> the bully in here only demonstrates what bullies do. This isn't a
> "personal battleground" that must be totally occupied by your
> personal perceived slights/insults/whatever...yet you keep on with
> that sort of thing. Ho hum. Boring to most readers. Doesn't work,
> can never work...except in the fantasyland withing your head.

That you're responding to this lays waste to THAT argument,
Lennie.

That it's "boring" to "most" readers is irrelevent. These words
are directed to one person...that they can or may be read by others is
incidental to the medium in which they are offered.

As for "keeping on" with insults, etc, you should read some of
your own postings. Why do you chastise me for doing that which you
ahve made a career?

And "force" you to do anything...?!?! If by humiliating your
over and over that you "resist" actually becomming a licensed Amateur
just to "spite" me, then yes, Your Putziness, I "forced" you to not be
a Ham.

> Try to remember that you are NOT some high-rank NCO and that
> this is NOT some kind of military service. Playing the Dill Sergeant
> won't get you out of any pickle you make by your own words.

I'm not the one with the lies to overcome, Lennie.

As for being a bully, etc, that's your cowardly way of trying to
duck out of the "fight" YOU started. Most bullies ARE cowards,
Lennie, and I'd say you've done a fair job of "proving" that, too.

Putz.

Another domino falls.

No more code testing in 9A now.

They are now also the first country in Region 1 to get 7100-7200 kHz, not otherwise due until next year, I think. I'll be looking for 9A1A in 7150-7200 in the next contest.

> believe you are acting like that.

Why sure I said itï¿½and I'm not even "acting." (As in pretending, get
it? That was a jokeï¿½a little levity.)

> I *GET* that you like CW testing and you should *GET* that I don't.

I fine with that and stated as such. To clarify, you can substitute
"Kim's got it, (it being my opinion) but doesn't agree with it."

> THAT is all there is to *GET*. It's that simple.

Not in my opinion. IMNSHO, folks are a tad too quick to remove the
character aspect from many daily activities, both professional and
personal. How many times have you heard "It's just business, nothing
personal" or "It's unfortunate, but it's the bottom line that
matters." Usually when you hear these words, it's in conjunction with
actions that are going to adversely affect somebody's life. I've seen
folks that have put in twenty plus loyal years of some seriously hard
work for a company and get released just so the bottom line showed a
ten percent profit margin as opposed to nine. (IOW, double instead of
single digit growth.) While there are many valid "business" reasons
that can be quoted to defend this, there are some moral or "character"
issues involved here. I know it wasn't always like this and at some
point in history loyalty was rewarded with loyalty at many companies.

That's a professional example.

At 5-wpm, I don't believe for one nanosecond that Element 1 is about forcing people to become "proficient" in a mode, whether they plan on using it OTA or not. Perhaps 13 or 20, but certainly not 5-wpm. The FCC actually has some references to character, Jim, N2EY has provided an example. I personally believe that *one of* the valid cases in favor of retaining Element 1 is that it requires an individual to demonstrate a certain level of self-discipline that is not achieved by cramming a published Q&A pool.

Furthermore, I think that many of the folks want to do away with the character aspect solely to remove a valid argument against the removal of Element 1. ("But the FCCï¿½, but the FCCï¿½, but the FCCï¿½") Just like the professional who don't want to feel bad about "making the unpopular decision" or following "good business practice" while legitimately shafting good employees. So now we have a whole generation of young folks that are prepared to enter the workplace, possibly "earn" their way into a position where they can do some harm, but won't care because they were taught that it's ok to step on and use others as long as it fits a prescribed business plan. What'll it be like in another sixty or seventy years?

It ain't so simple, Kimï¿½at least not to this observer. Character means somethingï¿½in all of life's aspect. A hobby and/or service called Amateur Radio is just one of them.

You could always past it as a quote.

> That Dave Heil is so damned bored with life that he has to concoct things
> from thin air is usual and status quo for him. Don't be so quick to jump on
> a Dave Heil bandwagon...because those wagons don't travel far at all.

I'm not on any Dave Heil bandwagon. That I agree with him in this case
means only that I agree with him in this case.

> For anyone with computer sense, it is unreasonable to even consider that a
> post could be issued under the guise of someone else--contrary to the
> opinion that it can be done.

I would have submitted the post as a quote, and perhaps with a "ahem -
My callsign is W5TIT in case you forgot, Jim!" You would have made your
point most eloquently in that case.

> And, when I resubmit "The Pool" list with my
> callsign attributed to my prediction date, it is certainly weak, at best, to

> resubmitting a post an attributing my callsign to my prediction.

Who's angry? Jim has the right to be skittish about your callsign. You
have the right to call him on it. I'm not going to presume to tell you
how to make your posts, but I'll tell you how I would have reacted in
the same circumstances.

> However, if you or anyone else, is so desperate to reach for the stars in
> some display of dislike for me--then go for it.

Who dislikes you? Not me.

If Kim is uncomfortable with Kim's callsign, that is within his rights. Standard email would have left no doubts about the message. Message quoted, and "this" should be changed.

I don't know about everyone's mailreaders, but on the ones I used, it takes an extra effort to reply to a message and take the quotes out.

I noticed it immediately. What is the point of doing it otherwise?

Wow-wee .....

It used to be guys on this group talked about CW, callsigns, degeneration of ham radio service, obtuse ham calls, on air manners, testing, classes etc.etc.etc. Now the group discussion has been elevated to waist sizes and the ability on one to visualize one's anatomy ....

Maybe we can incorperate this into testing or better yet a contest .... lets see a special multiplier maybe or maybe a weekend contest .... preferably after the holidays ...

Wastebands measurements phone sprint seems like a good name. The major problem I see is that we need to have a formula for the DX guys as the metric system would give them an unfair advantage.

I looked and looked and looked and looked and nowhere in 97.501, 97.503 nor anywhere in S25 did I find any regulatory requirement to "demonstrate a certain level of self-discipline" as part of the qualification procedures. Is this another of those "test of worthiness" things that occasionally floats to the surface around rrap?

Hang around here long enough, and you will see someone write something like:

" A really tough written test would surely separate those who really have an interest in the hobby.", or..

" Other, more relevant, methods can establish an applicant's dedication to the service.", or..

" I think it is effective at minimizing the undesirables.", or..

" ..... the key to maintaining the quality of hamming is making it something to work for.", or..
.
"My opinion is that any obstacle you put in the way to any achievement guarantees that only those with dedication and strong interest will get there."

All of the above quotations, gathered from rrap threads, were made by serious and well-intentioned licensees who want the best for the Amateur Radio Service.

All of the above quotations also completely miss the mark, in that they suggest that the examination process is the key to ensuring that "the right kind of people" (those who are "worthy") become licensed and, by extension, that "the wrong kind of people" get filtered out.

First, the testing procedure is an "entrance" exam, not a "graduation" exam.

Second, while "interest", "dedication", and "hard work" might be hallmarks of good amateurs, the FCC and ITU regulations do not specify levels of interest, dedication, hard work or other

measures of "worthiness" as requisites for a license. Therefore it is not the function of the examination process to determine (even if it could) if an applicant is "worthy" but rather to determine if he/she is QUALIFIED to use the spectrum assigned. There should be no "dumbing down", but neither can there be a requirement that the examination process screens out applicants who lack "commitment".

Don't get me wrong here, folks. I believe that the examination process ought to be rigorous enough to determine proper knowledge and skills so that a new licensee does not inadvertently trash the bands, hurt themselves, or harm other users/uses of the spectrum. I am not even suggesting that Morse testing is a "good thing" or a "poor idea". But I have no expectation that ANY examination can filter out "unworthy" applicants who lack the proper dedication or motivation.

Even if it could, who then would become the arbiter of "worthy"?

your words were:

"...There is nothing in part 95 that mandates public service like that found
in part 97."

tr.v. manï¿½datï¿½ed, manï¿½datï¿½ing, manï¿½dates
1. To assign (a colony or territory) to a specified nation under a mandate.
2. To make mandatory, as by law; decree or require: mandated desegregation
of public schools.

The way you have used the word conforms to usage number 2. Therefore, you
have stated that public service is required even though that may not be what
you meant to say.

You can receive just about any mode of slow scan tv ever used with the
software called MMSSTV available at the following site:

http://www.qsl.net/mmhamsoft/

Scroll down the screen 'til you see the link. This is incredible
software made even better due to the fact that it is true freeware as
long as it is being used for non-commercial use. No nags, no time
limits, just a really fine program in use by hams all over the world.

It's really easy to use, but that being said, you'll get more out of
the program if you read the help file.

To receive pictures all you need is a cable from the "speaker out" on
your receiver, to the soundcard "Line In" jack on your computer...no
other interface is required. Works super.

Good luck and enjoy....

Yep. Except that some Christians celebrate it on a different day in early January.

>Nothing will change that, not even any irrelevant
>facts about how the holiday came about.

They're not irrelevant at all. They show how the pagans were searching for the Light, and recognized the importance of the Light.

The celebration of Hanukkah has similar connections with Light. Its date is determined not just by sunlight but also moonlight.

I don't think those non-Christian origins detract from the meaning of the holiday at all. They simply show the universal nature of the search.

73 de Jim, N2EY

btw, you might want to look up the origin of the word "Easter"...

That may well be the case, Hans. And since some Morse Code skill is obviously part of being a qualified full-privileges radio amateur, it makes sense that the standard license would include a Morse Code test.

>I can't imagine "one who was interested" would fail to qualify in 10 years,

[Smithers]

>got so little
>attention compared to Loni Anderson, who has to be one of the scariest
>wimmin this lad has ever seen.

It was part of the subtly subversive nature of the show, Mike. All of the characters were true originals and stereotype-busters.

Part of the subtext was that the more attractive "Bailey" was overlooked because of people's assumptions rather than the reality. The viewers saw it, of course. Same for the fact that "Jennifer" was actually in charge and very intelligent, "Johnny Fever" had an encyclopedic knowledge of rock and roll, "Venus" had a hidden past that no one suspected, etc. Appearances were intentionally deceiving.

Remember episodes like the one where Jennifer moves to a new house? Or the ones with the "Red Wigglers" and "Ferryman Funeral Homes" singing commercials? When Venus explained the atom in two minutes? Johnny Fever's reaction time after several drinks? Save The Flim? The list goes on and on..

And truly great music was part of the show, yet never slowed it down.

Yet the show was cancelled even though it was #6 overall in the ratings. The *overall* ratings. Can you imagine a #6 show that cost almost nothing to make being cancelled today?

"WKRP" and "Barney Miller" essentially invented the workplace ensemble sitcom that has no central character.. Before those two shows, almost all sitcoms were reinventions of the nuclear-family-plus-sidekick based 'The Honeymooners" and/or "I Love Lucy", (which are quite alike in many respects, except that the gender roles are reversed in "Lucy"). Most sitcoms today are simply variations on
Alice, Ralph, Trixie and Ed, or Lucy, Ricky, Ethel and Fred.

Jim:

I'm a ham, and here's a tip: There are tens of thousands of comedians out of work. You're giving it away for free doesn't help the situation.

BTW I'm on Day 5 of In Flew Enza. Haven't been to work yet this year. Hopefully Thursday. I'm on some good antibiotics now, wish me luck.

>That's a professional example.

This sort of thing is also why CC&Rs have proliferated, and are actually *supported* by many people. It comes from the bitter experience of having neighbors who do not have shared community values to take reasonable care of their properties. But ordinances and CC&Rs cannot replace the spirit of being a good neighbor.

>
>At 5-wpm, I don't believe for one nanosecond that Element 1 is about

>cramming a published Q&A pool.
>
That's one way to look at it. Here's another: There are very few prospective hams who already know enough Morse Code to pass the test. And it cannot be learned (in most cases, anyway) by reading a book or watching a video or doing a bit of this and that here and there. So it takes a bit of "personal investment" by the prospective ham, and the result is a skill specific to amateur radio. I think that specificity is what bothers some folks.

>Furthermore, I think that many of the folks want to do away with the
>character aspect solely to remove a valid argument against the removal
>of Element 1. ("But the FCC…, but the FCC…, but the FCC…")

FCC allows all sorts of things that are not in the best interest of the ARS. In part this is due to lack of resources.

Does anyone think that BPL can't be bad for amateur radio because FCC is allowing it?

Was it a good thing that FCC didn't go after that pop star or the network for saying the F-word on broadcast TV?

>Just like
>the professional who don't want to feel bad about "making the
>unpopular decision" or following "good business practice" while

And what connection the resurection of Jesus Christ has with rabbits hiding colored chicken eggs has.

And why no holiday for "Wester", "Norther", and "Souther" :-)

And why kids get dressed up in costumes and ask neighbors for candy on Halloween. A Chinese friend once asked me about that, all I could say was that it was an ancient tradition that nobody knows where it came from or why it was done.

Santa Claus actually has a religious tie in with Christmas. Santa is a modified version of St Nick, who, a few hundred years ago somewheres in Europe, would give the kids in his town small gifts to celebrate the birth of Christ.

Here you go, Dee.

From: "ARRL Letter"
Date: Wed, 26 Nov 2003 19:02:59 -0500
Subject: The ARRL Letter, Vol 22, No 47

==========
==>FCC REORGANIZES WIRELESS TELECOMMUNICATIONS BUREAU

The FCC has announced a reorganization of its Wireless Telecommunications Bureau (WTB) "to more effectively support the FCC's strategic goals--broadband, competition, spectrum, media, homeland security and modernizing the FCC." The WTB administers the Amateur Radio Service (Part 97) and amateur licensing, but the changes are expected to be transparent to the amateur community. The Amateur Service now will be administered by the newly named Public Safety and Critical Infrastructure Division. D'wana Terry, formerly chief of the Public Safety and Private Wireless Division, will head the new division.

"The bureau's portfolios have been redistributed along the lines of strategic goals, consolidating similar functions to focus resources better," the FCC said in a November 24 public notice. As a result of the reorganization, which the FCC approved November 13, WTB expands from five to six divisions: Public Safety and Critical Infrastructure, Spectrum Management Resources and Technologies, Auctions and Spectrum Access, Spectrum and Competition Policy, Mobility, and Broadband.

In addition to the Amateur Service, the Public Safety and Critical Infrastructure Division will oversee Part 95, Marine, Aviation, Intelligent Transportation Systems, Public Safety Fixed Microwave, Public Safety and Private Land Mobile services and E911, among other areas. Responsibilities moved elsewhere include Fixed Microwave (Part 101), Instructional Television Fixed Service, the Multipoint Distribution Service, and the Multichannel Video Distribution and Data Service.

The action reduces the scope and size of WTB's larger divisions and eliminates separate branches below the division level, while retaining their current functions. One of those was the Licensing and Technical Analysis Branch, headquartered in the FCC's Gettysburg, Pennsylvania, office. Among other tasks, that branch has handled the granting and issuance of Amateur Radio licenses and the vanity call sign program. Another was the Policy and Rules Branch at FCC Headquarters, which has been the home of Bill Cross, W3TN, an FCC figure well-known within the amateur community. Among other tasks, that branch has handled Amateur Radio rule making petitions and Part 97 rules interpretations.

A potential plus of the new arrangement is that Cross now will work under another amateur licensee, Mike Wilhelm, WS6BR, who will report to Terry.

The FCC said eliminating branches would promote greater management flexibility in deploying resources and lead to a flatter, more flexible organization without altering the bureau's overall mission. The Commission said it was able to carry out the reorganization by redeploying existing positions.

WTB Chief John Muleta said the reorganization will result in "a mission-driven team that will be innovative in its approach to regulatory policies and customer service."

Do you think it's her right to misattribute?

Do you think it's her right to change quoted posts with no indication of having done so?

Do you think it's her right to end a post with someone else's typical signature?
>
>Jim is apparently trying to make a point about Kim's call sign, which he and
>many of us think borders on 'tacky'. That's his right.

To be exact, I think the callsign she chose for herself is inappropriate for the amateur radio service. I agree with Riley's evaluation of it. But I have tried not
to make a big deal about the issue.

I cannot control what others put in their postings here, but I *can* control what I post, and so certain inappropriate words and phrases are edited out by me. The editing is done in accordance with Usenet and email standards. I try to always be clear what words were written by the original author and what words were not.

I found it amusing that other posters who "had a problem" with Kim's choice of callsign wrote many, many postings containing that callsign, therefore giving it
far more visibility than it would otherwise get.

>Kim is apparently trying to make a point about Jim. That's her right.

Do you think it's her right to misattribute?

Do you think it's her right to change quoted posts with no indication of having done so?

Do you think it's her right to end a post with someone else's typical signature?

"Well, isn't that special?" ;-)
>
>YMMV. That's your right.
>
It's surreal to note that Kim's alteration of quotes raises far, far less comment and condemnation than my omission of her callsign. In fact, I've been omitting it for many months and no one has noticed until now.

Of all the people who post here, Kim always struck me as the one who would *least* need to have her status as a radio amateur (or her status as anything else) validated, endorsed, supported or otherwise patronized by me. Or by anyone else.

I'm sometimes electro-politically incorrect. That's not going to change. Deal with it.

But I don't misattribute and then say the header should make it clear.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008
K0HB: January 1, 2011 (first date not in "this decade")

Closest date (before or after) wins. Anyone else?

I did, but saw no need to comment until the mis-attribute letter came along.

Most of her posts have the correct attributes (or is that
attributification) 8^) How this message became "different" is a mystery.
Maybe it was an accident, maybe it was not. Heck if I did that, I'd send
out an "oops" at least.

You're kidding, right? Just because we didn't say anything doesn't mean we
didn't notice.

Personally, I think you should use her call if you are going to use
everyone else's. But I'm not an Internet cop.

My reaction to Kim's post was initially "why did she post without adding
anything". If I see something in quotes I don't even read it. In fact I can
skip over it by clicking on a particular symbol, and usually do, unless I
need to go back and get the context. And the name of the actual sender is
very prominently displayed to me.

So, if this was misattribution it wasn't very successful, as I saw it was
from Kim immediately and just thought she hit 'send' by mistake. Granted
different people don't see the same screen, as they are using different
newsreaders, but that's how it appears to me using XNews.

Here's an update on various estimates of when Morse code testing will be
eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008
>> K0HB: January 1, 3000 (first date not in "this millenium") <<

Closest date (before or after) wins. Anyone else?

> > alice and Ralph thing wasn't it.

And the Ed and Trixie thing, to an extent.

Audrey Meadows was about 18 when she auditioned for the part of Alice.
The casting people didn't want to give her a chance because they
thought she was way too young and way too beautiful for the role, and
would not stand up to Jackie Gleason's bombastic style. She showed up
with her hair pretty much as it is in the show, no makeup, very dowdy
clothes, and came out on stage talking in her Alice voice. Gleason
took it all in, stood up, pointed and said "That's Alice".

Note that no matter how much Ralph yells, throws his arms about and
carries on, Alice never flinches. Not even an eyelash.

Often imitated, never equaled.

Today we have "According to Jim" with Jim Belushi and Courtney
Thorne-Smith. Like THAT would ever happen...Before that, "Home
Improvement" was essentially the same show. All the way back to "Dick
Van Dyke", (Everyman nuclear family with scenes at both work and home)
which is still funnier than almost all of its imitators.

(Hall closet full of walnuts? Morey Amsterdam's constant wisecracks
about Mel's hair?)

> Television sucks now. The only things I

>
I think there's as much good programming today as at any time in the
past. The problem is that there is so much more programming today, so
almost anything can get on the air. Most of which is JUNK.

Here in Philly during the '50s and '60s there were three stations (one
for each network, 3, 6, 10) and they were on the air about 18 hours a

day. Then what is now the PBS station (12) came on the air. Great stuff - but usually there was nothing worth watching.

Then in the late '60s came three UHF stations (17, 29, 48). Then cable, which caught on even in places where you could SEE the Roxborough antenna farm on a clear day. Today, with a cheap TV and a pair of rabbit ears I can see 3, 6, 10, 12, 17, 23, 29, 35, 48, 52, 65. But there's usually nothing worth watching.

We remember the good shows and forget the bad ones. One of the reasons the original "Star Trek" made such an impression was that it was so different from the rest of the bad, bad, bad TV of the time. Such as "Lost In Space", which recycled the same B-movie robot...

> > "as God is my witness, I thought turkeys could fly..."
>
> Ahh, my favortite episode!

Almost everyone's. I have it on tape. Watch it every Thanksgiving. "They're hitting the ground like sacks of wet cement! oh, the humanity!"

> Gaw, I laughed till I cried, and then some.
>
"Then the turkeys mounted a counterattack. It was as if they were...organized!"

Then there's the one where the unscrupulous photographer secretly takes pictures of Jennifer getting changed, and the gang has to get them back. The scene where Johnny and Bailey impersonate a magazine editor and centerfold model (respectively) for a nonexistent magazine and con the bad guy is priceless.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

Egbert: September 13, 2003
Jeff: September 29, 2003
Leroy: December 31, 2003
Bill: January 1, 2004
Phil: March 15, 2004
Jim H: April 1, 2004
Jim M: April 15, 2004
Alun: May 1, 2004
Ryan: July 1, 2004
Robert: August 1, 2004
Larry: September 15, 2004
Charles: December 30, 2004
Dee: July 1, 2005
Mike: July 5, 2007 ("minimum 4 years from date of requirement drop")
Kim: June 1, 2008

Hans: January 1, 3000 (first date not in "this millenium") <<

Closest date (before or after) wins. Anyone else?

Howzat?

Well, no one can say we didn't give them the chance. Too bad too, since it allows us to form some new ideas. Not every idea is practical, but one comes along every once in a while that gives you a Eureka moment.

If we don't want to talk about the Morse code test, maybe Kim's callsign? 8^)

Now there's a flashback moment! my first crush when I was a kid was MTM.
Now if I see a rerun I'm immediately reminded why. BTW, Mary should get
some consideration on this list. I think she is a classy lady, and still
looks fine.

Then comes my next crush, Barbara Eden. But boy was that show ever Stupid!

Some of the stuff I liked as a kid I found to suck today. "Couragous

Cat and
Minute Mouse" sucks when you're an adult. But "Rocky and Bullwinkle" got
better when viewed as an adult.

"My Mother the Car" had to be the worst TV show ever done. "Lost in Space"
was decent for the first 2 episodes, then rapidly bit the big one
thereafter.

I rarely watch anything that is not the news or sports on TV anymore.

Mike,

Heh - I have carefully avoided that discussion so far, as it seems to be taking on a life of its own.....aw, OK, if you insist......

For the record - and staying well away from the current "who edited whose post, was that ethical and did they intend t make it look like the original author did it?" debacle - my personal view of the "Kim's Call Sign" issue is as follows (and directed at no particular person or whacko in particular) :

- W5TIT is a valid and legal call sign issued by the US Government, via the FCC - if they believed that it was inappropriate, they could have removed it from the list of available suffixes just like the Motor Vehicle Licensing folks do with certain (ahem) words and acronyms

- she earned the right to it by becoming licensed, just like every other Amateur

- she has the right to pick any vanity call sign that she chooses, so long as the FCC has not prohibited it for whatever reason. Why that particular call? That's nobody's business except hers!

- she deserves to be addressed by her call sign if she so chooses - I assume that in Texas, she may have it on her vehicle licence plate too!

- no one other than the FCC has the right to prevent or censor her use of it in any way (say, this might be the first legitimate use of the 'Free Speech' thing here on the group!) Would those who refuse to spell out her dreaded call here in the group refuse to say it on the air as well? Jeez, seek help, your inhibitions just might be taking over your life!

- in Ontario, VA3TIT is available - VE3TIT is in use (by a gentleman named Neil - would someone like to censor him too? :)).
Apparently, just like the US, the Canadian government sees nothing wrong with this suffix either. (and neither does Neil, I suppose...)

- the thing that really needs to be censored here is the sophomoric behaviour, boorishness and tittering (sorry - couldn't resist) of a few sadly immature folks here in the group.

- if Kim interprets the intentional omittance of her callsign from newsgroup posts as disrespectful towards her personally, then she and I have something in common - so would I!

and, lastly

- Kim is definitely braver than me - I choose not to use my call sign on the Usenet groups, to limit the number of crazies that have access to my snail mail info, where she is willing to deal head on with whomever, whenever in defense of her rights as detailed above.

In summary - you go, girl!

Halloween is a run together form of "All Hallow's Eve, meaning "All Saint's Eve." It is the night before All Hallow's Day, which is a religious holy day to honor saints that do not have specific days set aside for them. The belief used to be that on the night before All Hallow's Day that the Devil's minions would roam the earth. If one dressed up like ghosts, devils, and goblins, etc, one would be protected from these creatures (it appears to have entered Christianity from some pagan religion). Now to prevent these evil creatures from harming them, ordinary people would give them gifts (food, candy, etc). Therefore the people who were disguised as these creatures also needed to do the same so that the devil's minions would not be able to penetrate their disguises. If a person did not appease the demons, the demons would play tricks on them. And thus the disguised people also needed to do the same if the did not receive a treat in order to maintain their disguise.

OK Bert, show me where it says that Part 97 mandates public service. There
is nothing in this quote to that effect.

Thanks for the pointer, Dave. I'm getting back into the *nix world
after being away from it for almost 10 years and I've forgotten more
than I remember, it seems.

I'll try to find F6FBB and see if I like it. I've become very
attached to the look and feel of PkGold over the last 10+ years that
I've used it, and of course in a pinch I can use a straight terminal
program....

It was awful when I was a kid. "Tom Terrific (with Manfred, the Wonder Dog)" was so bad it was good.

>But "Rocky and Bullwinkle" got better when viewed as an adult.

That's because it was actually an adult show. The network did not understand it at all. "Kirwood Derby"? Anti-anti-anti-missile-missile-missile? Mr. Peabody?

Matt Groenig credits "Rocky" as the inspiration for "The Simpsons". Homer's middle initial is J in honor of Jay Ward, creator of R&B.

>"My Mother the Car" had to be the worst TV show ever done. "Lost in Space"

> required even though that may not be
> what you meant to say.

I don't have time to waste on this, Dee. You know what Part 97 says, and what it means (and therefore what I meant). A more complete definition of "mandate" is...

Noun: mandate ('man'deyt)
1. A document giving an official instruction or command
2. A territory surrendered by Turkey or Germany after World War I and inhabited by people not yet able to stand by themselves and so put under the tutelage of some other European power
3. (politics) the commission that is given to a government and its policies through an electoral victory

Verb: mandate (man'deyt)
1. Assign under a mandate; of nations
2. Assign authority to

I used mandate in the context that Part 97 assigns authority to Ham radio operators to perform public service through ARES, community organizations, and so on. There is nothing like that in Part 95. Obviously, there is nothing in "assigns authority to" that is required.

Sorry about that, Dee.

While the following is not an actual part of Part 97, I feel it means
something...especially since we were all issued a reminder by a very high
profile FCC employee directly responsible for an aspect of the ARS.

THE AMATEUR'S CREED

The Radio Amateur is:

CONSIDERATE---never knowingly operates in such a way as to lessen the
pleasure of others.

LOYAL---offers loyalty, encouragement and support to other amateur, local
clubs, and the American Radio Relay League, through which Amateur Radio in
the United States is represented nationally and internationally.

PROGRESSIVE---with knowledge abreast of science, a well-built and efficient
station and operation above reproach.

FRIENDLY---slow and patient operating when requested, friendly advice and
counsel to the beginner, kindly assistance, cooperation and consideration
for the interests of others. These are the hallmarks of the amateur spirit.

BALANCED---radio is an avocation, never interfering with duties owed to
family, job, school, or community.

PATRIOTIC---station and skill always ready for service to country and
community.

(Paul M. Segal, W9EEA wrote the original Amateurs Code, in 1928

The PATRIOTIC description pretty much sums it up.

> - Mike KB3EIA -
>
>
>

It was not an "oops" at all, Mike. I've noticed before that Jim sends that list out without my callsign associated with it. I consider that my prediction is probably among the most accurate of the predictions that have a true "pulse" on amateur radio--REGARDLESS of the callsign of *any* chosen ham.

Jim is disrespectful to me to make it look like I am not an amateur when he chooses not to associate me as an amateur when I've made a conscious decision to participate in something he's providing for fun. I deliberately, with no malice, and consciously deleted the attributes of the original message simply to include my callsign in the list.

I don't give a hoot if you, the Usenet police, Jim, or any other person has a problem with that.

I've requested that Jim just plain remove my name and prediction from the list. If he cannot accept me as an amateur radio operator, equal in every way but license class to any other amateur, then I deliberately, with no malice, and respectfully abstain from regarding *him* at all.

Agreed Kim. I have been to Croatia twice since 2000
and I have found it to be both a friendly place and
progressive minded country. The food was a mix of
Italian and Eastern European and the bars/clubs/outdoor
restaurants were open from dusk till dawn. Despite this
everyone was well behaved, both the tourists
and locals. Designated drivers or people were there
to help those home who imbibed a tad too much but you
never saw a single alcohol related incident during both
my stays in holiday in Croatia, and I felt far safer walking
with my friends back to the hotel in Porec, Valalta and Trpanj
at 2:00 AM after an evening of wining and dining that I would have
felt doing similar activity in New York or Miami.

Is it not a shame that some hams (who claim to be "World Wise" ??)
would measure a whole Country's worth, solely on the basis of
if they kept a stupid Morse code test..?

I guess we can draw amusment from the fact they show
all their abysmal degree of ignorance by posting
such juvenile remarks.

Hwere's how I did it:

On the QRZ main page, go to the "Name lookup" way down on the left
hand column. Type in your zip code and hit enter.

Your usage is still incorrect. There is nothing in Part 97 that assigns authority to hams to do public service either. I've read part 97 from beginning to end. Also there was no reason to include noun definitions when working with the verb.

Oh I definitely agree that part of being a ham is doing public service. It is just that there is a big difference between should and must.

Also please let me know which dictionary you are using. I've checked several and for the verb meaning your number 2 does not appear. The only ones that I find are your number 1 and the second meaning is always to make something required.

:Language is a tool that must be used correctly to convey the intended meaning. One should never operate on the basis that "you know what I mean" as sooner or later that gets a person in trouble.

>
There were a whole raft of "country" comedies about that time - "Andy Griffith", "Beverly Hillbillies", "Petticoat Junction", and of course "Green Acres". To me they were about average, neither excellent nor terrible. "Green Acres" was probably the most original, though, because the characters and situations were almost surreal.

writes:

>Jim is disrespectful to me to make it look like I am not an amateur when he
>chooses not to associate me as an amateur when I've made a conscious
>decision to participate in something he's providing for fun.

There was no disrespect intended, Kim. If you feel disrespected that's your
perception, not my intent.

>I deliberately, with no malice, and consciously deleted the attributes of the
>original message simply to include my callsign in the list.

At first, you simply changed the quoted text *without* changing the > symbols,
so it looked like I wrote something I did not write. I chalked that one up to
a simple typo and said nothing.

Then, you peeled off *all* the > symbols, including the one by my
signature line, so it looked like I had signed a post you made.

>I don't give a hoot if you, the Usenet police, Jim, or any other person has
>a problem with that.

If you do not respect Usenet conventions, why should anyone respect
your desire to have your callsign included? You want respect that
you do not give others.
>
>I've requested that Jim just plain remove my name and prediction from the
>list.

Done. No problem.

>If he cannot accept me as an amateur radio operator, equal in every
>way but license class to any other amateur, then I deliberately, with no
>malice, and respectfully abstain from regarding *him* at all.

I have *always* accepted you as an amateur radio operator, Kim. But
I do not post your callsign because I think you made an inappropriate
choice.

But we hams are not "equal in every way but license class". Each of us
is better at some things than others. I'm sure there are things involving
amateur radio that you're better at than me, and there are probably things
involving amateur radio that I'm better at than you. So we are not equal in
every way but license class.

I did not include your callsign in the list because I think that your choice
of callsign (even though it's legal) is inappropriate to the amateur radio

service. You *chose* that callsign, and the FCC would not have issued it sequentially.

The fact that something is legal does not make it appropriate to do, or in the best interests of all concerned.

665. Austria terminates BPL test

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-10 14:44:39 UTC
From: Mike Coslo <mcoslo@enoughalreadyadelphia.net>
Message-ID: <rdULb.10367$uF6.3229119@news1.news.adelphia.net>
Source record: 85441

A BPL field test was cut short because of HF radio interference recently The town of Linz in Austria.

The Government Ministry for Commerce, Innovation and Technology Closed down the tests after a Red Cross emergency service disaster response drill that was the victim of massive BPL interference.

The feild test has been plagued by problems before this, and the utility had been looking into some ways to reduce interference to Amateurs and others

One more nail in BPL's coffin, and considering what happened and who it happened to, it's a darn big one.

>If you're one
>of the millions of immigrants entering this country, the speech we use on
>the radio, and on the radio tests, in this country is not already in the
>"toolbox."

That's true.

But is it unreasonable to expect immigrants who want a specialized US license to learn that language?

>And Spanish certainly isn't in the "toolbox" of many other Hams
>in this country.

True again!

How much Spanish do you hear on the ham bands being used by US hams?

>So, even if you ignore any skills needed for the voice
>modes (however minor), there is still some validity in Kim's argument.

You mean that there's no test for voice operation?

>Spanish is use more often the CW in this country (more popular), so perhaps
>we should test all operators on the ability to speak Spanish like we test
>for CW now.

Are you saying that more US hams use Spanish on the ham bands than US hams use Morse Code? That seems very far fetched.

btw, we *don't* test all hams for Morse skill now.

>Or, since English is more common (popular) in this country today
>than Spanish, perhaps we should test all on the ability to speak English
>like we test for CW now.

In a way, we do! WHile I've heard that in some areas Spanish license materials are used, I've never seen any. All the test materials, FCC forms, Q&A pools and other license stuff I've been able to find is all in English.

So in most parts of the USA, if you want a ham license, you need to be able to read and understand English well enough to fill out the forms and pass the written tests.

>In other words, as Kim says, popularity alone is
>not a justification for a code test unless it is equally so for voice.

So if a person can understand 43 words of English spoken at a rate of 25 words per minute, they pass....

Let's face it - most people over the age of about 3 could pass that test with no preparation whatever. If you make them write the words down, make it 6 years of age.

I think the real objection many folks have to the code test is that it requires them to learn a *skill* that is completely new and different, and specific to amateur radio.

One of the strangest things I've ever not seen. But although I didn't
think anything of it at the time, I guess the show was pushing the
envelope in the clothing area. There was at least once that makeup
forgot to hide her navel.

Rephrased then... we DO test all hams that have or want a license
to operate HF for morse skill... but hey, maybe we should
reinstitute waivers again since the treaty is no longer
mandating the 5 wpm which the FCC never waivered before.

Cheers,

>
>There was no disrespect intended, Kim. If you feel disrespected that's your
>perception, not my intent.

But Jim, it is disrespectful to intentionally and repeatedly refuse to acknowledge the rights of another person - especially in a public forum. That is not just her perception - it's pretty clear to me as well! Do you believe that you have the right to impose your own personal morals and prejudices upon others? Did anyone here ask you to go ahead and censor anything which you found to be personally offensive? Certainly not.

>
>>I deliberately, with no malice, and consciously deleted the attributes of the
>>original message simply to include my callsign in the list.

Without malice, perhaps, but not without prejudice. A prejudice, by the way, which I would rather not have thrust upon me!

>you do not give others.

Jim, since when do two wrongs make a right? That doesn't sound like
you! Or are you saying that you deleted her call because she does not
follow Usenet conventions? That's not true, either.

>>
>>I've requested that Jim just plain remove my name and prediction from the

>I have *always* accepted you as an amateur radio operator, Kim. But
>I do not post your callsign because I think you made an inappropriate
>choice.

That is not up to you to decide, Jim. The FCC could have refused to
issue the call if they felt that it was inappropriate (just like the
motor vehicle vanity plate folks do!). Other countries (VE for one)
freely issue this suffix as well!

If you met Dick Van Dyke in person one day, would you refuse to
address him as anything other than 'Richard', because you felt that
his parents made an inappropriate choice? Of course not! That's
silly.

>
>But we hams are not "equal in every way but license class". Each of us

>amateur radio that you're better at than me, and there are probably things
>involving amateur radio that I'm better at than you. So we are not equal in
>every way but license class.

Jim, you know that's not the level of equality that Kim was referring
to. As an licensed amateur, she is entitled to use her FCC-issued
vanity callsign, just like you! (and, up here, VE7TIT, VE3TIT and
VE2TIT - all licensed amateurs, two of whom are male).

>
>I did not include your callsign in the list because I think that your choice
>of callsign (even though it's legal) is inappropriate to the amateur radio
>service. You *chose* that callsign, and the FCC would not have issued it
>sequentially.

Why not? It is a legal suffix, and if it was not on some banned list
it may have gone out in sequence. Please refer me to an FCC statement
to the contrary. In Canada, if you don't select a call when you pass
your test, you get one issued randomly. If it's on the list, it's
fair game! And this suffix is on the list in all of the VE areas.

>
>The fact that something is legal does not make it appropriate to do, or

>in the best interests of all concerned.

Jim, please do not put yourself in the position of deciding what is in the best interests of anyone other than yourself - I for one would prefer to make my own determination of what I find acceptable and unacceptable. that role does not belong to you, me or anyone else here!

I would suggest that you are way out of line when you impose your own value system to overrule something which is permitted by law. If Kim's callsign is that offensive to you, then you should ignore her posts entirely. On the air, you would probably ignore or refuse to reply to someone whom you found to be offensive - here in Usenet, we have the killfile for this purpose. Not censorship! Intentional deletion of her call is disrespectful, (it is!) and not within your mandate as a reader of this group or a fellow ham to do.

Jim, doesn't our society have enough 'politcally correct' folks running around already (jeez, even 'manhole covers' are called 'access covers' now, because someone got offended by the 'male bias').

I would think that inappropriate use of her call would be anything related to sexual innuendo, referenced to the slang word "tit". Those posts I ignore. Not censor, ignore.

Appropriate use, however, would be anything related to amateur radio - as it is a valid callsign. Like this newsgroup, for example.

Why on Earth a man of your intelligence would have a problem just typing it, I'm sure I don't know. Whatever it it, I hope you are able to navigate past it, Jim. Kim earned the right to use her call, and you have no right to deny her that right to do so. Period.

It may have looked that way to a lot of folks. However, quick observation
(to an astute individual anyway) revealed the [refrain: sarcasm and
demonstrated indignation with which that entire action was meant to relay].

You've been disrespectful since you began posting that list without my callsign. I daresay you made a conscious to *be* disrespectful when you did that: as evidenced by your statement, something to the effect of you could not believe no one has noticed it until now.

> >
> >I've requested that Jim just plain remove my name and prediction from the

> choice.
>

And, what if I suddenly decided that you made an inappropriate choice about something and decided to start calling you George, or Stan because I think "Jim" is too disrespectful for the community of man? My callsign *may* (and I wholeheartedly disagree with you) be inappropriate for amateur radio; however, it is my callsign. You have at times offered to communicate with me over the amateur bands, Jim. Did you intend on embarking upon a communication refraining from using my callsign? THAT would be entirely unacceptable to me. Would you throw away a QSL card from me?

If you are so affected by my callsign, why do you stop at just refusing to "print" or enter it somewhere? If you object enough to demonstrate *any* disrespect/shunning--whatever--then you should shun totally. You demonstrated that you will only act upon your belief to the point at which it is convenient for you.

>

And, I thnk you are totally incorrect about that. Each of us being better at some things than others is exactly what makes us all equal in the wash. I am exactly as important to my company as the CEO; in different aspects, but nonetheless we are each as important as the other. The *only* difference between me and the CEO of my company is that he makes more money than I do. I am just as liable for actions and decisions I take at my company as he/she is. I am just as able to be terminated as he/she is. I am just as replaceable as he/she is. Each and every amateur is equal to the next.

> I did not include your callsign in the list because I think that your choice
> of callsign (even though it's legal) is inappropriate to the amateur radio

As I said, if you are so fixated upon demonstrating by deletion of my callsign; then I dare you to carry further with that an shun me totally. In fact, I implore it of you! It totally has me upset to think that you are so affected, yet you communicate with me. (for those "unastute": that was sarcasm)

> The fact that something is legal does not make it appropriate to do, or

Then you should perhaps find a better dictionary. WordNet is an online lexical (dictionary) reference system developed by the Cognitive Science Laboratory at Princeton University. The project was funded in part by a grant from the National Science Foundation and has been reviewed positively by linguistics researchers at MIT, Yale, Cambridge, Oxford, and numerous other universities.

So far, Hans has sent in his ideas only as a comment to others' petitions and proposals, Mike. He hasn't sent FCC a petition or proposal to FCC.

>It just won't seem right to comment on
>it there without being called stupid...oops, I mean novel! ;^)

I think that if Hans was really serious about his proposal, he'd send it off to FCC just like the other 14 petitioners recently did. I say this because it is highly doubtful that the major and unique features of his proposal would be adopted by any other group such as ARRL, NCVEC, or NCI. It is also highly doubtful that his proposal, when submitted as a comment, would have nearly so much effect nor gather nearly so much attention as if submitted as a proposal.

If and when Hans did submit it as a petition, FCC would then most probably assign it an RM number and take comments and reply comments on it. Which I sense is a process that Hans wants to avoid, because there are bound to be both supporting and opposing comments. It would be fascinating to see the reactions....

But it's Hans ideas and therefore his call as to whetehr to submit it or not.

Most of the Spanish I hear are Mexican, Central American, and South American hams not US hams.

Merriam Webster is a well respected source as are the others that I checked.

However, here you go and Part 97 does NONE of these. Your usage is still
incorrect.

http://www.cogsci.princeton.edu/cgi-bin/webwn2.0?stage=2&word=mandate&posnum
ber=2&searchtypenumber=2&senses=&showglosses=1

Results for "Synonyms, ordered by estimated frequency" search of verb
"mandate"

3 senses of mandate

Sense 1
mandate -- (assign under a mandate; "mandate a colony")
=> delegate, designate, depute, assign -- (give an assignment to (a

person) to a post, or assign a task to (a person))

Sense 2
mandate -- (make mandatory; "the new director of the schoolbaord mandated regular tests")
=> order, prescribe, dictate -- (issue commands or orders for)

Sense 3
mandate -- (assign authority to)
=> delegate, designate, depute, assign -- (give an assignment to (a person) to a post, or assign a task to (a person))

Even sense 3 would be a requirement as when one is given an assignment, you are supposed to carry that assigment. It is not just a suggestion or desireable activity. If a person or group does not carry through on an assignment, then that assignment is given to a group who will.

I repeat, Part 97 does NOT mandate in any way shape or form that amateurs participate in public service.

Since no one is prohibited from doing public service, no authorization is needed. However, if one wishes to use ham frequencies, they have to have license but that is an authorization to operate specified frequencies not an authorization to do public service.

If you will read 97.1, Basis and Purpose, it only lists recognition of and encouragement of public service as one part of the basis and purpose. That does not confer any type of mandate or authorization to the amateur to do public service. It is a recognition of what we do and the value of what we do. It is a good and solid justification to use for the continued existence of amateur radio. Nothing more.

But you have no negative comments for the person who does it.

>But do you concur with attempts to alter the perception of
>a person's status as a Ham by blatantly omitting that person's callsign in a
>list containing only the callsigns of others?

Yes, if the callsign is inappropriate to the ARS.

Do you think all possible callsigns are appropriate, Dwight?

Last year the treaty was changed so that hams can now be issued calls with four-letter suffixes (like W3PENN, for example). Think of what could be done with some of the combinations.

>Jim is aware of what he's
>doing. Kim had already asked him to include her callsign (a request which
>should have been unnecessary).

Why should such a request be honored? Is it against FCC rules for me to omit a callsign in a Usenet post?

You have had no problem when others have used insulting names rather than callsigns to refer to me, but when I use Kim's name instead of callsign you tell me what I should do. Looks like a double standard to me.

Kim has been asked to choose a more appropriate callsign. She has refused, which is her right, of course. Just as it is my right to avoid that callsign and others like it when possible.

Why are you surprised, Steve? Have you not read the same sort of thing over and over from the same source? Why would you expect anything different from the person whose idea of "civil debate" is displayed in his post of October 28, 2003, when he wrote (these are lenover21's words, not mine!):

"Shut the hell up, you little USMC feldwebel. Learn to READ English."

He told a lot about himself in that post..

>Now digital is not as good as analog? digital is a mere simulation?

Brian, "real" radios are ANALOG.

Real he-men morsemen don't use digital.

Digital is for techno-weebs who "don't have any interest in radio!"

Dave (who is interested in radio because he learned morse) can
download FIRMWARE for his Orion!

Analog morsemen are high tech, "interested in radio!"

LHA

What the heck is a "Southgate Type 7?"

Why is it named after a community in southern California?

Why doesn't Jimmie have a Type 8? Can't he download FIRMWARE
to improve it?

Did he ever have a Type 6?

Does he need a mailing address for the Jan Smithers Fan Club?

So many questions...

lha

"FIRMWARE releases?!?"

Gosh, you must be equipped with a Star Trek Transporter! :-)

Oh, you mean SOFTWARE updates, right?

Let's see, that's more than one per month.

I would think that Orion could have stabilized the programming by
now. No new band changes have happened in eight months... :-)

Gosh, Orion must "not be interested in radio" if they can't get
their software routines stabilized by now...

>

> I'm not the one with the lies to overcome, Lennie.

tsk, tsk, tsk...stebe, in reality, folks who have different opinions than yours aren't "lying."

You do NOT define reality.

Get out of your fantasyland and visit reality. It's a tough job but you have to do it someday...

You can start by telling us all the details of your many "hostile actions."

> As for being a bully, etc, that's your cowardly way of trying to
>duck out of the "fight" YOU started. Most bullies ARE cowards,
>Lennie, and I'd say you've done a fair job of "proving" that, too.

Poor little barbarian bully stebe. Everyone picking on you?

Are you going to "stop it" by exerting "a few ounces" (of trigger pull), mighty warrior?

> Putz.

Those aren't endearing words, little one.

But...they are the main words of this year's poster boy for US ham radio.

Let's all hear it for all that "goodwill" that hams have...!

Goodwill industries?

Are you goodwill hunting?

WMD

>
> I never said you "never" worked in electronics, Your Lyingness.

Yes you have. Both as just plain worker and as an engineer.

Well, you KNOW EVERYTHING about the electronics industry,
don't you? Worked less than half a year as a Purchasing Agent.
Super collosal electronics smarts required there, right?

> >>I<< said you never amounted to anything more than a very
>determined bench technician. I have complimented your cut-and-paste
>skills, however.

"Determined?" :-)

tsk, tsk, tsk stebe, you just can't get it right, can you? :-)

>> Or, reject all the facts, ignore reality, and say everything I've
>written
>> is "lies." That doesn't make your statement "true." It never will.
>
> Long list of "FACTS" snipped.
>
> The FACT is that I have spoken with people who KNEW you and wee
>not impressed.

Total utter bluffing BULLSHIT, sweetums.

You've NEVER "spoken with people who knew me."

Bluff. Bullshit. Very bad poker playing skills.

> The FACT is that YOU refuse to accept that your "professional"
>and military "experience" is NOT Amateur Radio.

That was never a subject except in your disordered little mind,
little man.

Radio is radio. It all works by the same principles of physics. It
doesn't "work differently" because some lawmakers create different
"services" for it.

> This forum is about AMATEUR RADIO.

It is FOR that. This newsgroup is UNMODERATED, has no
"entrance" requirements, no raddio kopps to "arrest" those that
don't conform to some bigoted ideas of hamme raddio.

> You have yet to demonstrate an even rudimentary understanding of
>what it is, let alone have participated in it.

Oh, my, have you been reading a biography of "Judge" Roy Bean?
:-)

Or just Attila the Ham (or "Atilla" if you speak Hunnish with a dialect)?

I need only memorize the Holy Words of the League and "know" what
it is about.

I need only turn on my R-71 and listen to what Hams talk about.

I can walk into any HRO store in the country without showing any pass
or presenting "papers" to the guard at the door.

No security clearances are required, no background checks from the
FBI.

> The FACT is that YOU have been caught in NUMEROUS fabrications or
>misrepresentations of truth and "called" on them over and over.

tsk, tsk, tsk, stebe, your therapist isn't doing so well.

You've regressed again into your imaginary world.

> YOU have no credibility herein as a result of that, Sir Putzy.

I might never be given credulity in Newington. :-)

Jim Fisk believed me. So did Alf Wilson. Even Rich Rosen.

You spoke to all of them about me, right?

> And (I've said this before) it's just peachy with me that you
>know more about electronics than I do or ever did, Lennie...Being able
>to quote Shannon's Law in your sleep is irrelevent here.

My wife says I sometimes snore a bit. Never heard me utter any
words or mathematical equations, though.

Buy me a long-run tape recorder and I'll set it up and run it. Will
get back to you if anything worthwhile is recorded.

You can send me yours. But leave out the tapes of close order
drill commands and the off-key Marines Hymn.

>> >> It's a wonderful life.
>> >

>> >wonderful it is.
>>
>> Perhaps. I'm not complaining. Why are you complaining?
>
> I only complain about having to tolerate compulsive liars and
>antagonists such as yourslef.

Well, "myslef" is totally guilty of saying nasty to neverland myths
or fantasyland fairy tales or the gross exaggerations printed by
the membership organization up somewhere in a suburb of Boston
(or Hartford or wherever)...

I'm sure your whole Hun club is as angry with me as "youslef."

>> I had to sit with the family gathering again to watch "It's A Wonderful
>> Life." :-) After seeing it so many times, it's still a good motion
>> picture even if very dated.
>
> "Family gathering"...?!?! You, Mrs Lennie and the cat?

? Far more than that. Why does that concern you?

Are you trying to find someone with a happy home life to insult and
demean?

>> >> Merry Christmas and Happy Holidays, Brian, all the best to you
>> >> and your family.

must be a green card mental hygienist with only a few months left.

>> Why do you insist on painting all those imaginary scenarios, trying
>> to denigrate others?
>
> Because those are the "scenarios" that your conduct engenders.

tsk, tsk, tsk, you still think your fantasyland is "real?"

Poor baby. Still can't take any REAL debate, can you?

Must be the influence of the "gunnery sergeant" mentality. No one
can EVER talk back to a gunny. :-)

>> I don't live in newsgroups...(SNIP)
>
> Sure you do.

Nope. In a suburb of Los Angeles, CA.

The address given in my Ham Radio article bylines is still valid.

Now, all together...Hup, too, tree, foah! :-)

Get some better therapy, stebe.

LHA

"teh ?" :-) Getting ANGRY again, are you?

There are several "McCoys" in electronics. Which one are you
referring to? Walter Brennan?

> YOU are the outsider here.

This newsgroup isn't "amateur radio."

This newsgroup is all about lets-pretend fish-story-tellers trying
to put down lots of other amateurs. All amateurishly.

I'm all for eliminating the morse code test from any radio license
examination. That's all.

You are the one on an extended field trip into fantasyland.

>
>> > I never claimed to be an engineer...But I did provide numerous
>> >references from that job that proved you WRONG on numerous occassions.

Where is this "engineering community" located? Have you been
there? :-)

Is it part of a Kibbutz? A collective farm? Does it have fancy
alphabets like ASME?

Where did you read this? Or, rather, who read it to you from some
printed reference? Your therapist?

Go for it, EX purchasing agent...

> And you further went on to say "real engineers" didn't need/use
>Amateur Radio...I gave you the callsigns of not only 13 engineers, but
>three of them were PhD's.

Of course you did...right after you accepted the Presidential Medal
of Freedom for keeping Homeland Security safe through ham radio.

In other words, in your MIND, sweetums.

I'm still a Life Member of the IEEE and a former member of the ACM,
both professional organizations. None of their many, many
publications have had "news" about Ham Radio Saving The Day!

But, in your mind, you know "lots" of PhDs, and other smart folks
who all LOVE ham radio and cherish, honor, obey morse code....

>> > I guess that had to hurt, knowing a "non-engineer" had access to

Yeah, like a little few-page weekly is on par with the New York TIMES.

Paris Review on a bad day maybe. St. Louis Post-Dispatch or the
Washington Post would hardly have such, would they?
George didn't have such, neither did Time, Life, Newsweek. Maybe
it was in People (which I only read in dentist offices). TV Guide?

Not in IEEE Proceedings or the monthlies from ComSoc (Communication
Society, a group within IEEE). ComSoc wants me back as a member.

It wasn't in EDN, or Electronic Design, or RF Design, or Microwaves &
RF. I don't bother with EE Times anymore. Maybe PET (Power
Engineering Technology)?

> (Squirm a bit harder, Scummy...)

Only if the mosquitos are biting. You WANT to but haven't gotten
any penetration yet...

>> > Again with the "1930's" rant, Lennie?
>>
>> Call it "transistorized 1930s," Stebe.
>
> I call it your "1930's rant", Lennie...It's not truthful, nor
>even representitive of anything associated with MODERN Amateur Radio.

Of course, Mr. PhD...MODERN amateur radio...extolling morse code
modes on HF as "always getting through when nothing else will..."

MODERN HF amateur radio: "What was good in the 1930s is still
good in 2000s!"

"Real ham radio is working DX on HF with CW."

>> Standards and Practices remain the same as 70 years ago.

:-) Not even close, Mr. Hotellier or Mr. Innkeeper. :-)

Quit trying to be a Host, sweetums. The only "host" you can be is
of a communicable disease.

Go get some therapy.

LHA

"Cite message thread?"

Why? Can't you read the English words in here?

Do you have attention deficit disorder that requires you to see
repeats of everything already written?

I'm sure you can "cross-reference." You are cross all of the time.

>> What's your excuse?
>
> Once again you avoid the request to prove your assertions with
>some sort of facts.

I asked a question.

You are trying to worm out of it.

tsk, tsk, tsk, stebe.

You read "Witches of Karres" and are all stuck on "worm weather,"
right?

> And so far, your "observations" are just bitter rants against
>just about anything that you can't/weren't able to understand or
>master yourself.

Wow, do you ever need pre-med!

Sweetums, you've got diagnoses all mixed up.

Must be the Religion Thing about morsemanship that is clouding
your few mental synapses.

> That's not "proof", unless just being a loser is your goal, in
>which case I'd say you have excelled.

"Excelled in losing?"

I once won $55 in the California Lottery. Don't gamble normally.

Let's see...what "losses?"

I have a comfortable retirement, don't have to go to work and suck
up to bosses. No mortgage on either house.

My regular-hours jobs were in a field I like and deliberately chose
long ago. Even spent lots and lots of nights in classes to make
the "engineer" job "official."

Never got fired, never got arrested. Got a parking ticket in New
Jersey once (not a felony then).

I'm happily married to my high school sweetheart, reunited after
many years; even attended a 50th high school reunion and didn't
fight with anyone.

I got into the big leagues of HF radio communication a half century ago, then got an Honorable Discharge from the US Army...no "other" kind of discharge. No excuses for anything there. Good Conduct ribbon, too! :-)

I've been both author-contributor and a staffer at Ham Radio magazine when it was still existing as an independent periodical. Real ink on real paper, many times a month. Was a national magazine available on newsstands.

Never once did I have to suck up to any ex-gyrene foulmouth who has a hate complex because he can't handle hisself in here.

No real losses. :-)

You must be absolutely right, Mike, therefore all who don't learn
morse code "must not be interested in radio!"

In my case, exposure to the big leagues of HF radio communications
while in the US Army piqued an interest in radio that eventually led
to changing majors (drastic change) and entering the electronics
industry to become an engineer.

The US Army didn't use any morse code to send over 200,000
messages a month from a command Hq in Japan. There's no need
to know morse code for electronics engineering or for most of the

radio transmitters of the 1950s on through the 2000s.

A quarter million IEEE members worldwide (me included) must not have any "interest in radio" because we don't or didn't learn morse code.

I've never heard of any morse code classes as part of electrical engineering curricula anywhere in the world. Maybe all those students for EEs aren't "really" interested in radio?

Consider that there's NO communications carriers in the USA even using morse code for any communications purposes today. I guess they must "not be interested" because morse isn't used.

How about that?

Sorry but that makes NO sense.

FCC does NOT require any licensed radio amateur to use morse
code modes over and above any other allocated mode. Ergo, there
is no allocation requirement to satisfy.

Further, it makes NO sense that morse code skill "qualifies" any
radio amateur for "full privileges" on HF/MF bands. That is an
artificiality lobbied (successfully) for by olde-tyme morsemen.

If US amateur radio service were named "Artificial Radiotelegraph
Service," then it would make sense.

beep, beep

tsk, tsk, tsk, stebe...YOU don't respect professionals. :-)

I've never stated any "boldface lies." This web browser doesn't allow selection of boldface type.

> On contraire again, Lennie...I get to radiate more than adequate
>"great power". I hardly ever use more than 200 watts on ANY band,
>however, since it's not necessary to use it.

You have 40 KW RF output capability? :-)

How about 600 KW RF output?

tsk, tsk, tsk, stebe, look again at amateur radio band allocations and allowed RF output power. you can't use it on "ANY" band.

> Of course, unlike YOU, I have a station license that allows me to
>establish a radio station wherein I can use it.

wow, stebe, impressville all the way! your vewwy own wadio station!

So...if I go into K-Mart or Wal-Mart and plunk down $99 for a shrink-wrapped CB transceiver "it's not my own radio?"

Okay, if I own a Cessna 182 and buy a Civil Airways VHF Comm transceiver and install it, "I wouldn't own my own transceiver?" Who would own it? FAA? USAF? An airlines corporation?

If I have an ocean-going sailboat and buy the "civilian" version of an SBC-2020 and install it, "I wouldn't own my own radio?" Who would

own it? SBC? USN? USCG? A cruise line corporation?

If, as a private businessman, I buy several transceivers to put in my
delivery vehicles, "I wouldn't OWN them?" Who would own them?
A city department of communications? FCC? NTIA? DMV?

Suppose I buy a pair of FRS HTs. "I won't OWN them?" Who "owns"
them? The store I bought it from using a valid credit card?

Oh, yeah, the only "real radios" are ham radios where everyone
works DX on HF with CW.

>> Of course, any former E-5 or higher that thinks "asshole" is a

>
> Nothing "gray" about it, Lennie. YOU keep trying to foist
>yourself off as a professional, both as an author and as an engineer,
>but YOUR conduct and YOUR language lend a different example.

No "foisting," pink one.

Got paid. That's the major distinction of the professional versus the
amateur.

IRS and Franchise Tax Board (of CA) both have my occupation down
as "electronics engineer" since the late 1960s. Several major
corporations' personnel departments have the same information.
The FBI has a dossier on me and has done a background check on
my work, family, and neighbors...no problems. Also DCAS (Defense
Contracts Administrative Service), CIA (!), NSA, DIA, IEEE, and AMA.

I am a published author in national monthly magazines...which can be
checked by examination of those issues. Real ink on real paper isn't
ephemeral like Internet newsgroup lying, pinkie.

If you want a real treat, hang around "Geek Boy Times" on the web.

That's in line with your claims, sweetums. [bet you don't even know what it's about and are going to bluff like heck about it...:-)]

> Sucks to be you, I'd say...

In addition to the Shop-Vac we have two Hoovers for the rugs here although one is really a floor cleaner and rug shampooer (but has a vacuum capability).

I can also pull a slight vacuum in the workshop with one of two Soldapults. Know what those are? :-)

Sold the little airbrush compressor hooked up in reverse to pull bubbles out of castings. No "sucking" there.

I'll bet you never sucked up to any boss, right? :-)

Pinkies do that. Don't think pink.

Avoid????? What a strange thought process, coming from someone who seems to be familiar with my participation here on rrap. Do I appear bashful about stating my ideas, and avoiding reactions to them?

The field is currently crowded with at least 14 petitions, and ARRL will likely make it 15. Would you like a petition of yours to be buried in that noise level? Timing, Jim, is EVERYTHING, and introducing another petition at this time would NOT be a way of gaining any significant mindshare from the rulemakers.

Happy Y3K,

de Hans, K0HB

Jim, leaving Kim's callsign out of the list was calculated to annoy her.
There's little point complaining that she didn't like it and acted

accordingly.

FYI, both my G calls end in VUK, which is a banned combination on car licence plates in the same country, apparently due to similarity with the F*** word. G8VUK was sequentially issued. G0VUK was not, which apparently puts me in the same league as Kim.

Here's an update on various estimates of when Morse code testing will be eliminated in the US. Note that four predicted dates are in the past.

WA2SI: September 13, 2003
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N8UZE: July 1, 2005
KB3EIA: July 5, 2007 ("minimum 4 years from date of requirement drop")
K0HB: January 1, 3000

Closest date (before or after) wins. Anyone else?

I agree! What rights were not acknowledged by me?

>That is not just her perception - it's pretty clear to me as
>well!

I ask again: What rights were not acknowledged by me?

>Do you believe that you have the right to impose your own
>personal morals and prejudices upon others?

Not to any extent beyond that which others have the right to do the same to me.

Do others have the "right" to demand that I use certain words in my posts?

>Did anyone here ask you
>to go ahead and censor anything which you found to be personally
>offensive? Certainly not.

I can't "censor" anyone on Usenet except myself. Kim, you or anyone else can
post whatever their ISPs will allow. That does not mean I have to repeat it.

What I did is called editing. It's my right to edit replies, isn't it?

Note this: I started this thread. The poll is my idea, and I wrote the original
list and its updates. So if someone says I *must* or even *should* not do the
list a certain way, it's *they* who are trying to censor *me*.

If someone wants to post a revised list with callsigns included, that's their
right - as long as they don't make it look like I wrote something I did not.

>>
>>>I deliberately, with no malice, and consciously deleted the attributes of
>>>the original message simply to include my callsign in the list.

>>you do not give others.
>
>Jim, since when do two wrongs make a right?

Which two wrongs? Kim has incorrectly attributed at least three of my posts.
I do not see where my nonuse of her callsign is "wrong".

Some might say that characterizing my nonuse of that callsign as "wrong" is
really a way of someone imposing their own personal morals and prejudices upon
me.

>That doesn't sound like
>you! Or are you saying that you deleted her call because she does not
>follow Usenet conventions? That's not true, either.

I did not use her call when making up the list because I think it is
inappropriate for the ARS. She chose that call - FCC will not issue such calls
sequentially. It
was discussed to death in a thread called "one step closer to extinction" that
exceeded 3000 posts.

>>>I've requested that Jim just plain remove my name and prediction from the
>>>list.
>>

>>
>>I have *always* accepted you as an amateur radio operator, Kim. But
>>I do not post your callsign because I think you made an inappropriate
>>choice.
>
>That is not up to you to decide, Jim.

Why not? Isn't it my right to have the opinion that certain callsigns are
not appropriate?

Is there a law which says I *must* use callsigns in a Usenet post?

ITU recently made it legal for countries to issue callsigns with four-letter
suffixes,
like W3PENN. Imagine the possibilities.

>The FCC could have refused to
>issue the call if they felt that it was inappropriate (just like the
>motor vehicle vanity plate folks do!). Other countries (VE for one)
>freely issue this suffix as well!

FCC *does* refuse to issue the suffix sequentially. Look in the database, or
better yet an old callbook, and you'll see that the suffixes immediately before
and after are much more common.
>
>If you met Dick Van Dyke in person one day, would you refuse to

>>every way but license class.
>
>Jim, you know that's not the level of equality that Kim was referring
>to.

No, I do not. I took it the way she expressed it.

>As an licensed amateur, she is entitled to use her FCC-issued
>vanity callsign, just like you!

Of course! And she does use it here.

But is there some rule that says I *have to* use it here? Do I not have the
right to refrain from doing so?

>(and, up here,

(several calls with suffixes identical to Kim's)

>all licensed amateurs, two of whom are male).
>
Were those calls sequentially issued?

>>I did not include your callsign in the list because I think that your choice
>>of callsign (even though it's legal) is inappropriate to the amateur radio
>>service. You *chose* that callsign, and the FCC would not have issued it
>>sequentially.
>
>Why not?

Because of its obvious meaning. There are several such callsigns. FCC will,
however, issue them if requested through the vanity program.

>It is a legal suffix, and if it was not on some banned list
>it may have gone out in sequence. Please refer me to an FCC statement
>to the contrary.

I refer you to the Callbook and databases.

>In Canada, if you don't select a call when you pass
>your test, you get one issued randomly. If it's on the list, it's
>fair game! And this suffix is on the list in all of the VE areas.

In my opinion, it's inappropriate. Do I not have the right to such an opinion?

>>The fact that something is legal does not make it appropriate to do, or
>>in the best interests of all concerned.
>
>Jim, please do not put yourself in the position of deciding what is in
>the best interests of anyone other than yourself - I for one would
>prefer to make my own determination of what I find acceptable and
>unacceptable. that role does not belong to you, me or anyone else
>here!

Any time a person expresses an opinion of what should or should not be done by
othr people, or what is acceptable or unacceptable, they are deciding what is
"right" and "wrong" for more than themselves. It's an unavoidable consequence
of having an opinion. The only other option is to never express any opinions at
all.

For example, some people say the Morse code test for an amateur license should
be eliminated. They're saying that their judgement on the issue should take
precedence over what others think and want. They're saying that the FCC's
current rules are incorrect and need to change.

And many of them say that what is *best* for amateur radio is for the code
test to go away. Do they have the right to say those things, and to try to get
their
will imposed on others, or not? I say they have that right - and those who
disagree have rights, too.

>I would suggest that you are way out of line when you impose your own
>value system to overrule something which is permitted by law.

See above about the tests.

What you are saying is that I *must* use Kim's callsign here, and I *must not*
oppose the choice of similar ones, because they are permitted by law.

Am I allowed to object to *anything* that is permitted by law?

>If Kim's
>callsign is that offensive to you, then you should ignore her posts
>entirely.

Why? Kim is not a bad person. She is not my enemy. I simply disagree
with her about callsign choice.

What you seem to be saying is that you want to censor *me*, by determining how
I can post here.

>On the air, you would probably ignore or refuse to reply to
>someone whom you found to be offensive - here in Usenet, we have the
>killfile for this purpose. Not censorship!

Where have I censored anyone? Where Have I tried to prevent someone from
posting anyhting?

> Intentional deletion of
>her call is disrespectful, (it is!) and not within your mandate as a
>reader of this group or a fellow ham to do.

I disagree.

Her choice of callsign is disrespectful ot other hams and the ARS. IMHO YMMV
>
>Jim, doesn't our society have enough 'politcally correct' folks
>running around already (jeez, even 'manhole covers' are called 'access
>covers' now, because someone got offended by the 'male bias').

I agree 100%. I see the attempt to force me to use Kim's callsign on Usenet as
a form of political correctness. I'm being told that I *must* post in a certain
way. Why?
>
>I would think that inappropriate use of her call would be anything
>related to sexual innuendo, referenced to the slang word

[slang word deleted]

Why do you think Kim chose that particular call, Leo? She's
not a birdwatcher.

>Those posts I ignore. Not censor, ignore.

I ignore many posts here. I don't censor anyone.
>
>Appropriate use, however, would be anything related to amateur radio -

>as it is a valid callsign. Like this newsgroup, for example.

This newsgroup does not require callsigns. Other posters have refused
to use my callsign, and instead have called me all kinds of insulting names -
and their was no protest from folks who now tell me I am being
disrespectful.
>
>Why on Earth a man of your intelligence would have a problem just
>typing it, I'm sure I don't know.

I don't have a problem typing it, Leo. I simply choose not to.

>Whatever it it, I hope you are able
>to navigate past it, Jim. Kim earned the right to use her call, and
>you have no right to deny her that right to do so. Period.
>
I agree 100%! She has the right to use it. But no one has the right to force
me to use it here on Usenet.

Or do they?

Suppose - just suppose - someone included a word or phrase you found
inappropriate or offensive in a post. Would you say that everyone *must*
include that word or phrase in any replies?

Depends upon the intent, I suppose. You intentionally edited out her
callsign, because you found it "inappropriate". If you aren't
comfortable with her callsign, why would you not pass the pool on to
someone who would be willing to handle it without prejudice? Wouldn't
that be the right thing to do? There is nothing illegal or immoral
with that callsign, except perhaps in the mind of the reader!

>Invalid analogy. "Dick" is a common male nickname.

And much more, as you know. So, as long as you are comfortable with
the word, then it's OK? Would you QSL with W5DICK, but refuse to
answer W5TIT? Why?
>>
>>>But we hams are not "equal in every way but license class". Each of us
>>>is better at some things than others. I'm sure there are things involving
>>>amateur radio that you're better at than me, and there are probably things
>>>involving amateur radio that I'm better at than you. So we are not equal in
>>>every way but license class.

>>
>>Jim, you know that's not the level of equality that Kim was referring
>>to.
>
>No, I do not. I took it the way she expressed it.

I suspect not - you are obviously much more savvy than that!
>
>>As an licensed amateur, she is entitled to use her FCC-issued
>>vanity callsign, just like you!
>
>Of course! And she does use it here.
>
>But is there some rule that says I *have to* use it here? Do I not have the
>right to refrain from doing so?

You may, of course, refrain from using it. But why do you feel that
you have the right to share your own personal views on why you have an
issue with it with the rest of the group?

And, do you belive that censorship is appropriate?
>
>>(and, up here,
>
>(several calls with suffixes identical to Kim's)

...'censored', as it were, for some inane reason - those are valid VE
call signs! Not the breast - er, best way to treat these hams.....
>
>>all licensed amateurs, two of whom are male).
>>
>Were those calls sequentially issued?

You may want to take that up with Rene, Neil and Shanta - whether they
requested them or not I'm sure I don't know. Or care.
>
>>>I did not include your callsign in the list because I think that your choice
>>>of callsign (even though it's legal) is inappropriate to the amateur radio
>>>service. You *chose* that callsign, and the FCC would not have issued it
>>>sequentially.
>>
>>Why not?
>
>Because of its obvious meaning. There are several such callsigns. FCC will,
>however, issue them if requested through the vanity program.

Why, if they are indeed "inappropriate to the ARS", would they do
that? They have total authority over those calls - surely they
ccontrol them better than that?
>
>>It is a legal suffix, and if it was not on some banned list
>>it may have gone out in sequence. Please refer me to an FCC statement

>
>>I would suggest that you are way out of line when you impose your own
>>value system to overrule something which is permitted by law.
>
>See above about the tests.

??

Sorry, Jim, I fail to see the connection between snubbing Kim
publically and whether Morse testing should be continued. I'll read

this over again a couple of Jack Daniels' from now, and see if it's
clearer then! :)
>
>What you are saying is that I *must* use Kim's callsign here, and I *must not*
>oppose the choice of similar ones, because they are permitted by law.
>
>Am I allowed to object to *anything* that is permitted by law?
>

Of course you are. But, as stated above, do you have the right to
impose your own personal standards upon others? Is it OK to single
out Kim in your list as the only one represented by name only in your
pool, because you are embarassed by her call? No. Of course not.
There are two gentlemanly things that you could do in this situation:

1. List all of the participants in the pool by name only, creating an
equal playing field and singling out no one.

2. End your participation in the pool on moral grounds, and let
someone else pick it up should they so choose.

It is never right to ostracize another person because you don't like,
or cannot deal, with something about them. What effect to you think
that doing this would have on Kim? Do you not see that your choice of
actions would hurt her feelings? Say, you weren't striking out at her
because she offended you, were you? Of course not!

>>If Kim's
>>callsign is that offensive to you, then you should ignore her posts
>>entirely.
>
>Why? Kim is not a bad person. She is not my enemy. I simply disagree

I agree with Jim, Steve. When I switched from CompuServe's default
e-mail/USENET reader (No killfile) to MS OE6, (Block Sender) my USENET
reading pleasure immediately doubled. Can you guess who my killfile's
very first customer was? ;-)

>> that should have been done at least 10,
>> 20 or even 30 years ago???
>
>
> Or 40, 50, or even 60, years ago.

Not really. Here's why:

Up until 30 years ago (before Bash books), a prospective ham did not know how many rules questions would be on the test, or exactly what they would ask. S/he only knew that anyhting in the regs was fair game. And it was such a pain in the [expletive deleted] to even get to an exam session, let alone retest, that most prospective hams overlearned in order to be sure of passing.

When I passed the General in 1968, the examiner said "why not try Advanced while you're here?" I had not studied for it at all, but there was no way a 14 year old who hadn't even started high school yet was going to argue with The Man! So I tried and passed easily. That's how much overlearning went on in my case.

>Which makes one wonder why this, and
>some of the other extended test ideas, are being advocated now.

Beacuse *now* is when rules violations are becoming more and more visible. And they're usually deliberate, operating-type violations, not technical mistakes.

30+ odd years ago, most violations were things like tuning up on the wrong harmonic, straying out of the band with a rig that had a dial mark every 50 kHz, etc. Look at today's enforcement letters - quite a contrast.

>I cannot
>help but suspect this is another example of the intolerance of newcomers by
>some existing Hams (and also a way for some to build themselves up by
>putting others down). Darn few of us knew everything when we started (I
>still don't).

Nor I!
>

>made mistakes (even those who started 40, 50, and even 60 years ago). Yet,
>when a newcomer does the same today, it is not simply inexperience, but
>instead malicious, or ignorance, or even the ruin of Amateur Radio.

I kind of think that when a new ham uses a modified transceiver to send false distress calls on a marine VHF frequency, it's not out of ignorance. Nor is the W6NUT repeater dominated by innocent mistakes.

>Some
>point to it to show how much better they are than that. And calls for a

>need for proof of a wider problem - a few isolated examples are always
>enough for the intolerant. And, once ignited, intolerance fuels itself. I
>truly hope I'm wrong about this, but that suspicion continues to grow.

Part of the problem is simple lack of enforcement - for years. Another part is lack of respect for the amateur community.

Jay draw all the amusement you or others want ...Larry's dumbing down context was regarding CW ...not the 9A national IQ. It is statements like yours that stretch and go into some bizarre perceived national insult that does no one any good and displays ignorance. Your statement is a classic juvenile non-sequitor as what does 9A night life have to do with CW.

BTW the 9A guys that I have worked on CW have been excellent ops. The sad condition is that a lot of the old YU ops met their end before their time.

I just went back through google too look at the post, Jim. The post is
probably about the same to misinterpret as the newsgroup mail style post.

But something interesting is in there.

In the post on 2004-01-06 at 20:15 PST is the particular post that got
all this started.

There is another post that is essentially the same that was posted at
02:49:03 PST, ealier in the day. That particular message *has* the
proper attributes.

Since all Kim's other posts have the proper attributes, I'd have to
guess that Kim knew pretty well that the second post would ensure some

controversy. Probably her way of making her point. Just a guess.

Alun, you can google up the background of Kim's call sign if you like.
It *is* a double entendre. I know this and am not particulary troubled
by it. Jim also knows this also, and is.

There is still also the issue of the two nearly identical posts from
the same day. THe difference is that post one is properly attributed,
and the second isn't.

Source record: 85397

Someone is telling me if you pass the 5wpm code test today (element 1) along with element 2 (or even separately), that the element 1 portion is only good for 365 days. I have tried to read part 97 but it is confusing. It used to be that you always kept credit for any element taken. So in 3 years if you wanted to upgrade to General, your element 1 and 2 would be good. What's the story?

Chris, N7FNB

Excellent point. There are a total of 4,661 documents on the ECFS
for those 14 petitions mainly concerned with code testing.

That's more than was gathered on NPRM 98-143 by close to 2K.

Obviously due to character flaws, of not expressing enought
commitment to ham radio....all a result of lack of morse code
proficiency.

>30+ odd years ago, most violations were things like tuning up on
>the wrong harmonic, straying out of the band with a rig that had a
>dial mark every 50 kHz, etc. Look at today's enforcement letters -
>quite a contrast.

NO ONE was illegal over three decades ago...NO ONE.

It all happened NOW...and all due to low commitment and
dedication to the olde-tyme hammes and morse code.

>>I cannot

>

>Part of the problem is simple lack of enforcement - for years. Another
>part is lack of respect for the amateur community.

For a dozen years. Ever since the creation of the no-code Tech
license.

All that disrespect and lack of dedication to the amateur community
for not embracing the healing, curative powers of morsemanship!

Terrible, isn't it?

All those years...those wasted years...all the olde-tymers getting
older, grumping around, kvetching and belching about newcomers
not having any respect for the goode olde values of amateurism!

Nobody could do anything, could they? They all sat around and
kvetched and nobody reported anybody, demanding that the feds
should have been dedicated to their Cause and making the ham
world safe for their elitist democratic-socialism where all got one
vote...to cast as one...on one viewpoint.

You tellum, Jimmie.

Dee (aka Ms Manners the Mother) has her "plonk filter" on...which
means she can't see my posts...she said.

Those who use "killfiles" are merely burrowing their heads in the
sand, refusing to look at other opinions.

In any other venue that would be an ultimate dumbing-down. A
firm refusal to even see another "unkind" post. Ostrich manner.

Sort of a psychnological refuge and "safe area" where all the seen
opinions are the "comfortable" ones that all agree upon.

I wouldn't fret none. All the "regulars" in here are mighty macho
morsemen...and one woman trying to sound off like she has a
pair.

I'll let you get back to the MAIN topic in this newsgroup...discussing
favorite female TV stars of the past. That's extremely important from
the aspect of amateur radio policy.

Nice not really talking at you, Tom...

A CSCE (Certificate of Successful Completion of Element) is only good for upgrading for 365 days no matter what. However, if you pass your Technician test and receive a Tech license, that is good for credit for Element 2 as long as you keep the license current (or within the grace period also I believe) even though the CSCE has expired.

Here's how the code test works:

CSCE for Element 1 - good for upgrade credit for 365 days but good for the Tech with HF operating privileges as long as your Tech license is valid and you keep that CSCE to prove that you passed the element.

So now let's look at your hypothetical case:

Today you pass the Element 1 (code) and Element 2 (Tech written). You will receive CSCEs for both. Your license arrives within a few days and off you go happily operating. Now 3 years pass. Your CSCEs will not be good for upgrade credit BUT the Technician license will still give you credit for Element 2. You will not have to retake Element 2. However, you will have to retake Element 1 because your upgrade credit has expired (it remains legal for you to use your HF privileges even so). Thus to get a General license, you will have to present your Tech license, pass the Element 3 test and re-pass the Element 1 test. Now lets suppose you decide to go to Extra after you get your General. All that you will have to do is present your General license (as long as it is in good standing) and pass the Element 4 test.

I hope this helps.

My question is, if you have elements 1 and 2, even after a year has
passed after taking element 1, do you still have the "novice" HF
privileges of the Tech +HF, or do you have to take element 1 every 365
days to keep the privilege, even if you don't upgrade to General.

Your Novice privileges are good forever so long as you do not let your
license lapse. You do NOT have to retest to keep the privileges. You do
have to keep a copy of the CSCE in your file even though it has expired in
case you ever need to prove it.

To use the CSCE as credit for the General upgrade, you have to upgrade
within 365 days. If you do not upgrade in 365 days, you will have to retest
on code for the General.

730. Amateur Radio Newsline™ Report 1378 – January 9, 2004

Newsgroup: rec.radio.amateur.policy
Date: 2004-01-11 02:37:28 UTC
From: radionews@aol.com
Message-ID: <20040110213728.11201.00002570@mb-m11.aol.com>
Source record: 85506

Amateur Radio Newsline™ Report 1378 – January 9, 2004

Amateur Radio Newsline report number 1378 with a release date of Friday, January 9, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T. V-K hams celebrate a new ham radio, some new Amateur Radio problems in Nepal, and Canadian hams learn that they may loose 220 to 22 MHz. All this and the latest in the war against B-P-L on Amateur Radio Newsline report number 1378 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING: NO-CODE COMES TO VK-LAND

Major changes to ham radio in Australia were celebrated on the air on New Years Day. Q-News Graham Kemp, VK4BB, listened in and tells us what he heard:

--

When 1 January 2004 arrived, so to did a new era for Amateur Radio operators around Australia. At one minute past midnight, amidst the fireworks across Australia, Amateur Radio short wave frequencies lit up, too, as they celebrated the removal of a requirement for Morse Code qualification by getting on air in unprecedented numbers.

A quick scan through the 80 meter band during the first hour of the QSO party showed that there was standing room only with stations of all license levels participating eagerly in the party with some limited and novice limited stations handling high amounts of static and nearby station noise with considerable skill .

All states and territories activated special radio stations for the event. There were plenty of Wireless Institute of Australia stations on the air to help with the bonus contacts with VK5WI, VK6WIA, VK2WI, VK4WIG, VK4WIA and VK4WIT heard during the quick scan around 80 meters.

In the act, the Wireless Institute of Australia's club station VK1WI was activated from the home of their President, Alan Hawes. Way up north long time WIA supporter John Stevens took to the airwaves from the Townsville region.

As the morning wore on the stations operating were fewer but still at a level that veteran operators say rival the heydays of HF operating when Novice licensees were first able to access the HF bands.

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Still more changes to ham radio down-under is expected in the coming months. (Q-News)

RESTRUCTURING: NEW BANDS AND NO-CODE TO CROATIA

Croatia has become the first country in Region 1 to benefit from the expansion of the 40 metre band agreed at the World Radio Conference in Switzerland last summer. 9A amateurs have also been given privileges at 70 and 3,400 Mhz.

New amateur radio regulations came into effect in Croatia on the 26th of December. Since then, amateurs there may operate between 7,100 and 7,200 kHz on a Secondary basis, with a maximum power of 1,000 watts PEP, in addition to the normal Region 1 allocation of 7,000 to 7,100 kHz. On 4 metres, Croatian amateurs now have 70.000 to 70.450 MHz, with a power limit of 10 watts. They also gain a new band between 3,400 and 3,410 MHz, with a maximum permitted power of 150 watts.

The Morse code requirement for an HF bands licence was also dropped with the new regulations and there are now only two licence classes there: the full licence and a beginners' licence.

I’m Jeramy Boot, G4NJH, in Nottingham England. (GB2RS)

**

RADIO POLITICS: HAM RADIO IN NEPAL

Some bad news about ham radio in Nepal. Charles Harpole, K4VUD, says that his efforts, along with those of 9N1AA, to expand ham radio in that nation and to establish a memorial club station for the late Father Marshall Moran, 9N1MM, are on an indefinite hold. This, due to the disturbed social and political conditions there.

Harpole says that all radios and other gear that was donated some years ago have been distributed to the currently licensed native 9 N hams. Harpole says that the gear will come back to a club station someday. Harpole asks that everyone bear with this situation and extend understanding. (OPDX)

SPECTRUM REALLOCATION: 220 - 222MHZ ON THE BLOCK IN CANADA

Canadian Amateurs may lose part of the 220 to 222 MHz in the 1 point 3 meter band. band. Thats the recommendation being made by the Radio Advisory Board of Canada to Industry Canada following an 18 month survey. Rick Johnson, KA9VZD, is in Antioch, Illinois, with more:

--
In a move reminiscent of the situation in the United Sates back in 1991, the 220 to 222 MHz band would be transferred away from Canada’s Amateur Radio operators and given to that nations Mobile Radio service. That’s the bad part. Here’s the good news. The Radio Advisory Board of Canada has

recommended that Amateur repeaters in this portion of the band be grandfathered to continue operation for a number of years. That time period would be decided by Industry Canada which is Canada’s radio and telecommunications regulator.

The Radio Advisory Board also recommended allocating 219 to 220 MHz to amateurs in Canada on a secondary, non-interfering basis. This says the R-A-B-C would put the band in agreement with a similar allocation now available to radio amateurs in the United States.

But here is where the Radio Advisory Board of Canada begins to think outside the proverbial box. While most administrations seems to frown on the idea of hams and non-hams sharing spectrum and talking with one another in a common allocation, Canada has other ideas.

The Radio Advisory Board wants a 150 kHz wide parcel in the reallocated band be designated as “Public Service Spectrum.” A small band to be shared by Canadian Amateur Radio operators and Canadian Mobile Services for special public safety and disaster communications applications. In other words, Canadian hams could talk with their non ham counterparts -- and vice versa -- in a disaster scenario.

Radio Amateurs of Canada, as a member of the Radio Advisory Board of Canada, has opposed any changes to the 220 to 222 MHz spectrum. Unfortunately, so far with very little success.

For the Amateur Radio Newsline, I’m Rick Johnson, KA9VZD, reporting.

--

Industry Canada must now take this advice and decide what it will do with 220 to 222 Mhz, and how soon. The full story is on the web at http://www.rac.ca/news/canada.htm (RAC)

THE BPL FIGHT: BPL INTERFERENCE PROVEN TWO-WAY

Two organizations have filed comments with the FCC that augment previously expressed worries about potential interference from and to Broadband over Power Line systems. One of them shows that service providers could loose a lot of income if anyone operates even a low power radio near a B-P-L transmission line. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--
Picking up on the what it terms as grave concerns expressed by the Federal

Emergency Management Agency over implementation of B-P-L on December 4, the nonprofit Disaster Preparedness and Emergency Response Association has called on the FCC to require impartial B-P-L field testing as well as additional public comment and full and open public hearings.

The ARRL Letter says that in comments to the FCC the Disaster Preparedness organization concluded that serious interference to and disruption of critical emergency communications systems in several licensed services throughout North America would almost certainly result from BPL implementation as currently proposed.

Endorsing earlier FEMA remarks, the group said that proposed B-P-L systems don't just pose a risk of interference. Rather, they have already been shown to actually cause harmful interference to licensed radio services.

Meanwhile, the Amateur Radio Research and Development Corporation has filed additional test data with the FCC. This, to support preliminary findings suggesting that BPL systems are susceptible to interference from even modest Amateur Radio HF signals. AMRAD said its newest data demonstrated that amateur operation in the test neighborhood would cause many homes to lose their Internet connectivity.

For its RF susceptibility experiment, AMRAD used the Potomac Electric Power Company system test site. It features a mid-1960s vintage home with unshielded interior electrical wiring and overhead power lines.

AMRAD's tests found that at a distance of just over one-half mile, data transfer ceased in the face of a signal from a mobile 100 watt transmitter on 3 point 980 MHz. When sited adjacent to the test property, AMRAD said data transfer went away in all but one instance at a transmitter power of just 4 watts operating in the proposed Broadband Over Powerline spectrum.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

What AMRAD has now done is to prove that interference with B-P-L will be a two way problem. More so for data providers who won't see much profit if something as simple as a 5 watt C-B radio can shut down a neighborhoods B-P-L operations. (ARRL)

**

THE BPL FIGHT: TAMPA TRIBUNE PRESENTS BOTH SIDES

An excellent article that details both sides of the B-P-L controversy appeared in the January 5th edition of the Tampa Tribune. In it, reporter Will Rodgers provides not only the industry side of the issue, but the ham radio side as well. The article can be read on-line at the cyberspace address in this weeks printed Amateur Radio Newsline report. You can read the article on-line at www.tampatrib.com/Business/mgalzo1pd.html (Via e-mail)

**

WITH THE FCC: CHAIRMAN POWELL PROMOTES A FREE MARKET TELECOM REVOLUTION

The chairman of the FCC is sending out a message that the migration to digital telecommunications will not falter. Michael Powell says that entrenched service providers such as telephone companies and cable television providers can either join the party or suffer the consequences.

In a December 29th interview with reporters and editors from the San Jose Mercury News, Michael Powell shared a number of personal views. At one point he stated the current migration to digital is really a simple thesis. One that says for the past 100 years we've had one kind of communications system. That being a system that's both analog and narrow band. And while it's the greatest machine ever built by mankind, it's also extremely mature, and it's really, in Powell's view, at the end of its innovation life.

Perhaps Powell's most controversial statement came in regard to companies that are not eager to invest in the digital revolution. He said -- quote: "I have no problem if a big and venerable company no longer exists tomorrow, as long as that value is transferred somewhere else in the economy."

You can read more of what FCC Chairman Powell had to say at www.siliconvalley.com/mld/siliconvalley/7591252.htm (CGC)

**

RADIO LAW: FCC STILL NOT "NAMING NAMES" IN ENFORCEMENT ISSUES

The FCC's decision to no longer identify those hams allegedly violating the Part 97 Amateur Rules continues into the new year. The agency's Daryl Duckworth, N-N-Zero-W, has the latest word:

--

Duckworth: "The FCC, at least temporarilly, has revised the format in which it is supplying information on Amateur Radio enforcement actions. The new format provides only the state and city with a synopsys of the action taken, without naming any indiciduals.

Pursuant to privacy concerns, the FCC currently is reviewing its proceedures in its radio services regasrding the release of information about individuals. Following this review, the FCC will determine its privacy policy for the future. "

--

As we go to air there is still no word as to when the revirew of privacy proceedures at the FCC will be completed. Its been about two months since the ban on relesing names was put in place. (FCC)

**

COMMUNICATIONS LAW: NORWEGIAN COURT SAYS COPYING DVD'S NOT PIRACY

An appeals court in Oslo Norway has dealt a major blow to those trying to protect the intellectual copyright of material that they own from unauthorized duplication. This, after it upholds the acquittal of a 20-year-old Norwegian

man who posted a program on the Internet for cracking DVD security codes.

Prosecutors had appealed a lower court decision after Jon Lech Johansen was acquitted last January of violating Norway's data break-in laws with his DeCSS program for DVDs. The prosecution had sought a 90-day suspended jail sentence, confiscation of computer equipment and a $2,940 fine. But the judge ruled that Johansen could freely copy DVDs he bought, adding he didn't violate the Nordic country's laws protecting intellectual property.

The case was widely seen as a test of Norway's computer protection laws. Prosecutors said they were considering appealing to the country's supreme court. In the meantime, the decision is being viewed as a major setback for anti-piracy proponents in the entertainment industry, worldwide. (Published news reports)

HAM RADIO HONORS: SELECTING THE TOP 5 QSL MANAGER SURVEY

John Shelton, K1XN, Editor of the Go List says that it’s time again for his newsletters’ annual “Top 5 QSL Manager” survey. This is is a process by which DX’ers get to choose those that they consider to be the best QSL Managers with whom they have had dealings with in the past 12 months. Its also a way to provide at least a small “thank-you” to the work performed by these and other QSL Managers around the world.

The results of this survey will be given to Carl Smith, N4AA, for inclusion in the QRZ-DX bulletin and also announced on the GO LIST Reflector by mid February. To vote, send your list of those who you are the five best 5 of 2003 by e-mail to golist@golist.net before February 1st. Again, that address is golist@golist.net. (OPDX)

**

HAMFESTS: WINTERFEST IN VA. IN FEB.

Turning to the ham radio social calendar, the 28th annual Winterfest sponsored by the Vienna Wireless Society is slated for Sunday, February 29th. The gathering will take place at Northern Virginia Community College in Annandale, Virginia. And if you're ready to take the test, an Examination Team will be on hand Saturday, February 28th. More information is on the web at

www.viennawireless.org (KG4OJT)

**

MEETINGS AND CONFERENCES: AMSAT-NA IN FL IN FEBRUARY

And the next meeting of the Board of Directors of AMSAT-NA will take place at the Orlando Airport Clarion Hotel on Saturday, February 21 and Sunday, February 22nd. Starting at 8.30 am on Saturday, the meeting will be open to all AMSAT North America members wanting to take part.

Among the items to be discussed will be to develop the AMSAT North America Strategic Plan while considering current governing factors. AMSAT members wishing to attend and make a presentation to the Board should advise President Robin Haighton, VE3FRH by February 15th. Let him know the topic and the length of time needed to present. His e-mail is ve3frh@amsat.org (AMSAT-NA)

**

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

SPACE AND SCIENCE: NEW TRAVELING SPACE EXHIBIT

The largest traveling space exhibit ever has made its first stop The 12,000 square foot display will allow visitors to touch rocks from Mars and the moon, take a virtual visit to the red planet and explore the international space station.

The exhibit employs the most advanced technology available here on earth to get its message out. The exhibit will be at Seattle's Pacific Science Center through May 9th. Then, it begins its own journey on a 15 city tour over the next five years. (NASA News)

**

EMERGING TECHNOLOGY: SIREN SENSOR TEST IN L.A.

On the technology front, the Los Angeles Fire Department has been asked to study the possibility of equipping engines with a device to turn traffic lights green. This, so vehicles responding to emergencies don't have to stop at intersections. Bill Pasternak, WA6ITF, is in our Los Angeles studio with more:

--

Los Angeles City Councilman Tom LaBonge has asked the Fire Department to work with the City's Department of Transportation to start a pilot program using

technology such as SirenSensor. This is an acoustically activated device that can differentiate emergency sirens from ambient noise and then warn the civilian driver of the approach of an emergency vehicle. It does this by shutting of a near-by car's audio system or radio and activating both audible and visual signals. The councilman believes that this technology can help police and firefighters respond to emergencies with greater speed.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in the City of Angels.

--

No word when the tests of this remote control system might begin. More about SirenSensor is on the web at http://www.findarticles.com/cf_dls/m4PRN/1998_Nov_13/53213508/p1/article.jhtml (LA News)

**

NEW PRODUCTS: NEW QUICK-CHARGE NiMH BATTERIES

Turning to the latest in electronic products of interest to hams, we have this from battery maker Rayovac. That company has announced a new charger that it says is capable of fully restoring a specially designed Nickel Metal Hydride cell in only 15 minutes. Dubbed the I-C3, the new rechargeable cells and charging system uses Rayovac's In-Cell Charge Control technology that puts the control of recharging into the battery instead of the charger. The company says that doing this offers significant performance and convenience advantages over existing rechargeable and disposable battery systems. More information is on-line at www.rayovac.com (Rayovac)

**

NEW PRODUCTS: INTEL IN YOUR TV

And the world's largest microchip maker will soon unveil plans to make integrated circuits for use in digital television receivers. Santa Clara, California based Intel is exploring a technology called liquid crystal on silicon which is a hybrid between the more expensive silicon microchips and liquid crystal displays. This could significantly lower the cost of flat panel high definition displays. Industry analysts say that if this technology is successful it would pose a serious threat to established consumer electronics chip makers in Europe and Japan, such as Philips and Sony Corp., as well as emerging players like Texas Instruments. (Intel)

**

DX

In D-X, keep an ear open for members of a French radio club who will be on the air from Togo. This as the F6KOP Le Radio Club de Provins 77 announce that they plan to be active from Grid Square JJ06 as 5V7C from March 6th to the 12th. More information is on-line at http://5v7c.free.fr/defaulteng.htm (OPDX)

And OPDX reports that S57CQ, is now active from Bhutan as A52CQ and is expected to stay there through January 14th. Activity is expected to be on all bands as much as possible. QSL via S57DX. (OPDX)

**

THAT FINAL ITEM: THAT FINAL ITEM: ARDF

Lastly, some hams have learned the secret of enjoying the hobby while staying physically fit. They're the fans of on-foot transmitter hunting, also called radio-orienteering and ARDF. Reporter Joe Moell, K0OV, has the story of a California ham who is rapidly becoming one of the best.

--

I've told you about the many direction-finding medals that have been won by Jay Thompson W6JAY, Newsline's Young Ham of the Year. But you don't have to be Jay's age to be a big winner at international on-foot transmitter hunts. 61-year-old Bob Cooley KF6VSE of Pleasanton, California has just brought home a couple of gold medals from the IARU Region 3 Championships in Australia.

The competitions began November 28 near Ballarat, a historic gold mining town in northwestern Victoria province. They were hosted by the Wireless Institute of Australia and organized by the Victorian ARDF Group.

Cooley competed in M60, the Superveteran Category for men age 60 and above. On the 4.7-kilometer two-meter course, he found his required three fox transmitters in 1:30:25, seven minutes ahead of the second-place finisher. Then on the 5.6-kilometer 80-meter course, he did even better, finding all three foxes and getting to the finish line in 1:15:22.

All three IARU Regions hold championships in odd-numbered years. These events for Region 3, encompassing Asia and Oceania, drew 50 male and 9 female competitors from Australia, China, Japan, Korea, and New Zealand. KF6VSE was the only guest from North America.

A long-time competitor at non-radio type orienteering events, Bob has improved greatly since he discovered ARDF in 1999. He finished among the top ten in his age and gender category at the 2000 ARDF World Championships near Nanjing, China. This past summer, he won gold medals on both bands at the 2003 USA ARDF Championships near Cincinnati.

You can get a link to the complete results from Australia and learn more about world-class transmitter hunting on the Web at www.homingin.com. There you will also find the details on the upcoming USA ARDF Championships, which will take place in California next June. That's homingin -- one word -- homingin.com

From southern California, where we do transmitter hunting every month of the year, this is Joe Moell K-zero-Oscar-Victor, reporting for Newsline.

--

Again Joe’s website is www.homingin.com (K0OV, ARNewsline(tm))

'S 'bout time. Now, to all who have been participating in this debate, WHICH style of post was it that got more noticed I had added my CALLSIGN to the list? It took you all (and actually it took only Mike because no one else noticed) almost exactly 3 days to notice that the two posts were made on the same day. One with (and first) and one without attributes. And, I honestly ask: who really noticed one (attributes) or the other (no attributes)? I'd almost bet a buck that even Jim wondered what in the world was in that post that was different, whether the attributes were there or not. By the way, note that the post that was made somewhere around a couple of days ago...where I again submitted the list without attributes, note that in *that* post, my information appears at the top of the post (the "Kim Walker said" stuff). Is anyone watching this stuff? Really?!

The entire point had been having my callsign *in the list* as a ham radio operator. Jim complains that to Google or whatever, it looked like he had posted something he had not said. A) the only thing he had not said was my callsign so who cares? B) What about someone who is casually looking at those posts and completely disregards my submission because it *looks* like I don't have a callsign?

At any rate, I don't think attributes are as paid attention to as everyone thinks...UNTIL they come up like this...

Negative comments had already been posted by others. I don't kick people when they're already laying on the ground from the blows of others.

> Yes, if the callsign is inappropriate to
> the ARS.
>
> Do you think all possible callsigns are
> appropriate, Dwight?

Beyond the law, I don't think it is my mission in life to decide what is appropriate for others. If I have a problem with the laws (the callsigns allowed by the FCC), then my fight is with the lawmakers (the FCC). Whatever the case, I don't take it upon myself to engage in an ongoing campaign against those who make choices different then my own. Kim is aware of my opinion about her callsign (I wouldn't have chosen it myself). Beyond that, the discussion is over as far as I'm concerned. If I felt this is a real problem, I'd take up the issue of callsigns with the FCC.

> You have had no problem when others
> have used insulting names rather than
> callsigns to refer to me, (snip)

I've never seen anyone use insulting names to refer to you.

>Of course not -

But that's exactly what is being demanded of me. You're saying that if I write a post and refer to Kim, I *must* use her callsign. You're saying I do *not* have the right to simply refer to her as "Kim".

oh wait - I just did....

>but that does not confer upon you the right to remove
>or alter her personal data without her permission!

"personal data"? Everyone here knows she's a ham, and knows her callsign. In all of the 7+ years I've been reading rrap, there's been only one Kim. There have been at least 4 Jims, though.
.
>For the benefit of the amateur hobby, no less....

That's right. I did not change the meaning of anyhting anyone wrote. No one who reads this thread will think that Kim is not a ham.

>If you aren't
>comfortable with her callsign, why would you not pass the pool on to
>someone who would be willing to handle it without prejudice?

Because I have no prejudice in the matter. The word "prejudice" derives from "pre-judge", meaning to judge before all the facts are in. That's not the case here - the facts are in.

> Wouldn't
>that be the right thing to do? There is nothing illegal or immoral

>>right to do it?
>
>No - but that isn't the issue here.

Yes, it is. You are avoiding any criticism of Kim's actions. You're
telling me what I *must* or *should* do in my posts, based on *your*
personal morals and judgements - and then criticizing me for doing
what I think best in my own postings, based on *my* personal morals
and judgements.

>Your obvious discomfort with her
>call sign, and your intentional removal of it from your posts, is.
>You know that it angers Kim, but to do it anyway - because *you*
>consider it improper.

Sure. Don't I have the right to do that?

Just as she got that callsign, and continues to keep it, even
though she knows others consider it inappropriate and that
it angers others.

She has her right to that callsign, and I have my right not
to publicize it here. But you deny my right.

Nope. I'm editing it out.

"Censoring" would be if I tried to prevent her from posting it at all. I have
not
done that, and would not if I could.

>Do you believe that denying her right to be recognized by
>her fellow amateurs by this call is appropriate behaviour?

I think that not giving her callsign more exposure through my own posts is
appropriate behavior.

>Because you have some bugaboo about the suffix?

Because I think it's inappropriate and because I take responsibility for what I
post.
>

>>
>>I did not use her call when making up the list because I think it is
>>inappropriate for the ARS.
>

>That isn't up to you to decide, Jim. That is the role of the FCC.

Says who?

FCC is allowing BPL systems to be implemented even though they generate
enormous amounts of RF interference. FCC still requires code tests of
those who want US HF ham licenses, despite the loss of the treaty
requirement 6 months ago. FCC recently declined to penalize anyone when
a pop star used the "F-word" on network TV.

Does the fact that the FCC does the above mean I have no right to say the FCC
is
wrong?

Is it wrong for me to tell people not to sign up for BPL and cite the problems
it has?

Is it wrong for those who disagree with code tests to try to get the rules
changed?

Is it OK for hams to use the F-word on the air because FCC allowed it once on
TV?
>
>> She chose that call - FCC will not issue such calls

>>was discussed to death in a thread called "one step closer to extinction"
>>that exceeded 3000 posts.
>
>But it is her call - issued to her for her use.

And she hasn't used it for over a year on the air. Just here.

And if Kim wants to use it here, that's her right. But *I* don't have to use it
here.
>>

>>ITU recently made it legal for countries to issue callsigns with four-letter
>>suffixes, like W3PENN. Imagine the possibilities.
>
>Do you believe that the various administrations would issue just any
>old four letter combination?

Yes.

>I'd be surprised!

I was surprised that they would issue Kim's call. But they did. Why would you
be surprised if they
issued four-letter combinations? They allowed that pop star to say a certain
word. All kinds of
words are permitted here on the 'net - (wire comms are regulated by the FCC
too).

>Even the vehicle
>license plate guys have a handle on that one.....

Those are issued by the states, not the FCC.
>>

>>
>>Because of its obvious meaning. There are several such callsigns. FCC will,
>>however, issue them if requested through the vanity program.
>
>Why, if they are indeed "inappropriate to the ARS", would they do
>that?

-Because they don't care
-Because it's handled by computer and nobody really looks at the system
-Because they don't want the complaints from those who want such calls
-Because FCC is too busy with other matters and has too few resources.

>They have total authority over those calls - surely they
>ccontrol them better than that?

Nope.

In case you didn't know, Kim emailed Riley Hollingsworth about it. He
replied that while such callsigns were legal, the request and use of such
callsigns moves the ARS "one step closer to extinction".

>>>It is a legal suffix, and if it was not on some banned list

Kim chose that callsign for at least two obvious, prominent reasons:

1) She thought it was fun, and/or funny

2) She knew it would get lots of attention and create all sorts of reactions

She's told us all that here. Her picture used to be on qrz, too.

Why, yes.

>What a strange thought process, coming from someone who seems to
>be familiar with my participation here on rrap. Do I appear bashful about
>stating my ideas, and avoiding reactions to them?

Not here. But I don't know about in the much wider arena of petitions to the FCC.
>
>The field is currently crowded with at least 14 petitions, and ARRL will
>likely make it 15.

The comment and reply comment periods to all of those 14 petitions are long past. ARRL hasn't started yet.

>Would you like a petition of yours to be buried in that
>noise level?

What noise level? Right now there are no petitions/RMs/NPRMs on amateur license requirement changes out there. Yours would have the comment stage to itself right now.

Soon ARRL will have its board meeting, and then there will probably be a proposal that will gather all kinds of comments. Obviously you don't want to compete with that!

>Timing, Jim, is EVERYTHING, and introducing another petition
>at this time would NOT be a way of gaining any significant mindshare from
>the rulemakers.

Of course! But if you wait too long, the opportunity may be lost. Considering the way FCC tossed out 14 RM numbers in two batches of seven, if you wait you may find your proposal batched with ARRL's. If you wait too long, FCC could move on to the NPRM process before you ever get the petition sent in.

Dee, I've repeatedly explained to you what was meant by the word mandate. Nothing is required or mandatory in the context used. Likewise, without a stated obligation, there is nothing required or mandatory in giving an assignment or task to someone (or in giving authorization to someone). If you still cannot understand this, I suggest you look carefully at the words "mandate," "assigns," "authorization," and so on, including the synonyms. I have nothing more to say on the matter.

> I repeat, Part 97 does NOT mandate
> in any way shape or form that amateurs
> participate in public service.

Sorry, but public service is at the very heart of the basic and purpose of the Amateur Radio Service (as described in 97.1). And, while there is nothing mandatory about it, the mandate (authorization) to do so still remains. Likewise, I have nothing more to say on this matter.

I pay attention to every single attribute and immediately noticed the
difference in both posts. I elected not to get into the debate and kept my
opinions to myself. However since you seem to think people ignore the
attributes, I decided I must repond to dispel that notion. And as far as
I'm concerned, deliberately making the attribute appear to be something
other than it was happens to be wrong. Making errors in keeping attributes
in long threads happens and is excusable. Choosing to make an attribute
appear something else is not excusable.

To do the types of public service we're authorized to do (MARS, RACES, and so on), authorization is required.

Sec. 97.407
(a) No station may transmit in RACES
unless it is an FCC-licensed primary,
club, or military recreation station and
it is certified by a civil defense organization
as registered with that organization, or it
is an FCC-licensed RACES station. (snip)

Care to show me where Part 95 authorizes CB'ers to operate a station at all similar to a RACES station? What about a MARS station? What about operations serving government agencies and others? In fact, show me where Part 95 authorizes any activity beyond the recreational use of those frequencies.

> (snip) It is a recognition of what we

Sadly, far too many in Amateur Radio today have that attitude towards public service.

Again nothing in Part 97 gives amateurs a mandate in any sense of the
meaning of the word. It does NOT in any section of Part 97 authorize us to
do or assign us to do public service. So you remain wrong. I've just
finished reviewing Part 97 and it's not there. In 97.1 it is "recognition
and enhancement of the value..". That is not a mandate, that is not

authorization, that is not an assignment. It is a way of justifying
allowing us to continue to have the frequencies and privileges that we enjoy
but that is not a mandate.

So what is your likly timetable for submission?
After an ARRL submission?
If yes, how soon after?

There is a risk of submitting beyond a point where the FCC has
already digested the 14 or probably will be 15 submissions and
then posts a NPRM. By that time any new proposals aren't
likly to get any attention...IMHO.

Cheers,
Bill K2UNK

Correct.

> You do
> have to keep a copy of the CSCE in your file even though it has expired in
> case you ever need to prove it.

Many novices may not even have their original CSCE. The FCC would
also recognize a copy of your former Novice license as proof you passed
5 wpm.

> To use the CSCE as credit for the General upgrade, you have to upgrade
> within 365 days. If you do not upgrade in 365 days, you will have to
retest
> on code for the General.

My understanding is Novice has permanent credit for 5 wpm. No CSCE
needed if the Novice has a valid current license.

Did I miss something? Is this the last NPRM that FCC will issue in Amateur Radio matters?

The current salad bowl of 14 (15?) petitions is primarily concerned with Morse testing for HF access. I've already commented on that matter.

The changes I'd like to see in the Amateur Radio service are only mildly concerned with Morse Code, but primarily concerned with the fundamental licensing structure of our service. I don't want that issue lost in the cacaphony of noise surrounding the Morse Code testing issue, so if I do submit a petition it will be timed to avoid being confused as a "Morse Code" petition.

Jim,

Personally, I feel that it is indeed unfortunate that you do not see,
or will not admit to, your disrespectful treatment of Kim, W5TIT.
Your statements in defense of your conduct are based entirely upon
circular logic, rationalization, contradiction and denial - indicating
that you are not prepared to accept responsibility for your actions
towards a fellow ham here on the group. W5TIT told you straight up
that she felt disrespected by your actions. A simple apology to her
would have been appropriate. The right thing to do.

Jim, you have been a frequent victim of attack and insult here
yourself - frankly, you should know better.

Insulting a fellow amateur publically, then denying and justifying the
act with a litany of self-serving rhetoric. Do you believe that these
actions, your actions, are in the best interest of the Amateur
service? I suspect that few here join you in that belief.

"The ultimate measure of a man is not where he stands in moments of
comfort and convenience, but where he stands at times of challenge and
controversy." Martin Luther King, Jr.

> Part 95 authorizes any activity beyond the recreational use of those
> frequencies.
>
>

That is an authorization to operate on those frequencies and an
authorization to operate the station not an authorization to do public
service. There is a difference. And to do MARS or CAP, it is not the FCC
that authorizes you but other agencies and services. But I repeat that is
authorization to use the frequencies not authorization to do public service.
RACES is the same way. You have to be authorized for RACES operation but
that is not the same as authorizing one to do public service. RACES is a
very specific organization with very specific goals and tasks.

You do not and never have needed an authorization to do public service.
Where in the rules does it say that I need the FCC's authorization to do
communications at a walk-a-thon? Where in the rules does it state that I
need FCC's authorization to be part of the team that deployed here in the
Michigan area during the August power blackout? Where in the rules does it
say that I need the FCC's authorization to join ARES. Nowhere. The list
could go on and on.

> > (snip) It is a recognition of what we

Most of do follow the personal commitment to participate in public service since it is not only a long and time honored tradition but the right thing to do. That does not change the fact that there is no mandate to do so.

Yes that is true but I was addressing the case of someone who's first
license was a Technician. Since the the no-code Tech license became
available over a decade ago, very few people have entered the ARS through
the Novice license and since April of 2000, the issuance of new Novice
licenses was discontinued. So a lot of these people have never had a Novice
license to use as proof although it would indeed fulfill the requirements.

>

Yes that is true but I was only addressing the case of where all they have is the CSCE. i.e. They never held a Novice license.

>
>Did I miss something?

No, but I did. Thank you for clearing up your thinking on your method of presenting your proposal, Hans.

>Is this the last NPRM that FCC will issue in Amateur
>Radio matters?

Of course not! But once FCC does so (probably some months after ARRL does its proposal), it will be a while before they want to reopen that can of worms again.

Of course I could be mistaken on that. I thought that FCC would simply dump Element 1 via Memorandum Report and Order soon after S25.5 changed. At most I thought there'd be a quickie NPRM. But instead it looks like we're in for a long ride.
>
>The current salad bowl of 14 (15?) petitions is primarily concerned with
>Morse testing for HF access. I've already commented on that matter.

So did I.

Perhaps my preference for doing a job once rather than nickel-and-diming it to death is showing in that I think a more comprehensive approach (like your proposal) is better. But that's just me - and it's *your* proposal anyway.
>
>The changes I'd like to see in the Amateur Radio service are only mildly
>concerned with Morse Code, but primarily concerned with the fundamental
>licensing structure of our service. I don't want that issue lost in the
>cacaphony of noise surrounding the Morse Code testing issue, so if I do
>submit a petition it will be timed to avoid being confused as a "Morse Code"
>petition.

I can certainly understand and respect that approach even if I don't agree with it 100%.

My main concern is that if you wait until the Morse Code test issue noise dies down, it may be a long wait *and* there may be an addy-tood of "oh no, we're

not going to reopen THAT can of worms again". Meanwhile, really bad proposals like the "21st Century" ideas may take the stage, or even be enacted. As much as I disagree with some parts of your proposal, it is infinitely preferable to the "21st Century" concepts.

So it becomes clear to me now that you will submit it to FCC when you know the time is right - which is not right now.

Dee, you addressed exactly the case I had in mind, a newly licensed
Tech, who then passes element 1, and plans to upgrade to General in
the future.

I don't know how this will play out. BPL is apparently *highly* susceptable
to rf interference. If you think BPL is going to play havoc with ham radio,
you're right - but ham radio is going to play havoc with BPL as well :))
As for a good communications method, PSK should do even better than cw.

Len,

Jim's point was well made. You appear to simply be trying to revive the code/no code arguement. My belief is that if the FCC enforcement bureau had not largely been disassembled, we wouldn't have the problems we do now. If we were to dismantle the police department of NYC and the murder rate shot through the roof, would you blame the drivers who insist everyone should stop for a red light?

You are seeing the same situation everywhere in society today. Nothing wrong with selling drugs to make some money, except, of course, for the stupid drug laws.

'Cmon, now, you can do better that that!

73 from Rochester, NY
Jim AA2QA

(original attributed "period" left above). And, Jim, by the same token
"everyone here" (a very general statement I might add--coming from you)
knows you disagree with my callsign and "everyone here" knows that you have
generally refrained from repeating it in a post. "Everyone here" knows
that. But "no one there" may know that when the post is encountered through
a search, casual observation, new folks, whatever.

one
> who reads this thread will think that Kim is not a ham.
>

My perception says you *did* change the meaning of something I submitted (i.e., wrote). I intend for anyone, *anyone* looking at that list to see the same, the *exact same* thing in each and everyone's submission. No else had to ask you to include their callsign: you made the conscious decision to "just" insert everyone's callsign--*but mine.* Therefore, there is an implied "difference" to a casual observer. I do not wish my submission to be any different from anyone else's, as the difference could mean to be taken as negative or positive--and whatever impression it makes is not important to me. I don't want there to *be any difference* between my submission, oh: *as an amateur radio operator*, as any other amateur radio operator.

If Len Anderson, for example, submitted his prediction of a date that CW testing will be removed from the amateur licensing process, a) would you insert his submission, b) don't you find his whole general nature abhorrent and would you insert his submission anyway and, c) would you insert his first and last name, just first name, etc?

> derives from "pre-judge", meaning to judge before all the facts are
> in. That's not the case here - the facts are in.
>

You cannot, on one hand, state that my callsign is a bad thing for the ARS--and you did state that--then, on the other hand, state that you have no prejudice. You *do* have prejudice and you demonstrate it every time you delete my callsign from a post. I've never (ahem, never) noticed if you keep my "signature" to my posts when you are replying to them, Jim. Do you? Or is my callsign just as offensive then as when I *intend* to include myself as an amateur radio in a list you have *generally* invited people to join? You have never stated "any offensive callsigns will not be listed." You have never stated, "Kim, I will include you in the list if you wish, but I will not include your callsign." You've actually never stated anything as to why you were refraining from submitting my prediction with my callsign *ATTRIBUTED* to it. You deliberately change the intention of my message by leaving my callsign out. *You*, Jim, did the *FIRST* deleting of attributions and, I might add, you have continued to do it for--what--over a year, about a year, somewhere around there.

Of course not. You probably *don't* have any prejudice where your own decsions and actions have been made. But, by my perception, you are *JUST AS WRONG* to take away--or leave out--*ATTRIBUTION TO MY CALLSIGN* as I am to take away--or leave out--attribution characters in an newsgroup post. I daresay, though, your deletion is far more offensive than mine. The basis, meaning, and original message and intent of that message was in no way harmed or changed when I added my callsign to the list. None. Except, perhaps, that it then could have looked like you had (God forbid) typed my callsign.

Your deletion--or leaving out, in this case--deliberately makes it look like I have no callsign.

> >>right to do it?
> >
> >No - but that isn't the issue here.
>

I agree. That isn't the issue for me, either. I think the real issue is exhibiting a form of respect for another individual who has earned the right to have a callsign attributed to her--*WHETHER OR NOT* you agree with the callsign. The one thing that Larry Roll has never, ever done--to his credit arrrghhhh, yes I said that--is "strip" me of my callsign. You have, Jim, and your actions are wrong. They are not only wrong, they are meanspirited and, to me, hateful.

> <---this attribute inserted

> >You know that it angers Kim, but to do it anyway - because *you*
> >consider it improper.
>
> Sure. Don't I have the right to do that?

>

No. You don't. Not in a "general" list you are compiling, where you have made no mention of how people will be listed. It was intended by me--and was when I first submitted my prediction--that I would be listed *just as every other amateur radio operator.* You *do not*, Jim--whether you think you do or not--have the right to *disascociated* me from my callsign. Period. But, especially in a list where you've invited people to join, yet you did not say anyone would be listed in any way differently than anyone else.

> <---this attribute inserted
> Just as she got that callsign, and continues to keep it, even
> though she knows others consider it inappropriate and that
> it angers others.
>
> She has her right to that callsign, and I have my right not
> to publicize it here. But you deny my right.
> <---this attribute inserted

You do not have the right to list me "differently" than any other amateur radio operator. You have the right to refrain from having my callsign in a post, I could agree on that. But NOT a list.

> >
> >>>>>I don't give a hoot if you, the Usenet police, Jim, or any other
person

> >
> >Why not? You are deliberately censoring her call from your posts,
> >aren't you?
>
> Nope. I'm editing it out.
>

Worse. To censor would be to refrain from REPOSTING any submissions wherein I had added my prediction. That would have been far more respectable. My response would have been to ask you why you were not including me; you would have explained, and I would have respected--fully--your decision to act on a belief you have in a respectable manner. I do not respect your deliberate act to deny me listed as an amateur radio operator in a list of other amateur radio operators.

>
> "Censoring" would be if I tried to prevent her from posting it at all. I
have

>
> >Do you believe that denying her right to be recognized by
> >her fellow amateurs by this call is appropriate behaviour?
>
> I think that not giving her callsign more exposure through my own posts is
> appropriate behavior.
>

Then, you would not be able to respond to any of my *OTHER POSTS*, Jim. Because each time you respond to a post from and *do not* remove my callsign from my original post, then you are "proliferating" my callsign--even more so, I might add, than when it would be in this thread, probably. This thread has only been this active because of this debate that is going on. I haven't checked, but do you deleted my callsign from replies to posts from me? You'd be leaving behind my name so people would still know someone named Kim has originally submitted the post. At any rate, deleting my callsign from a post would follow along with your reasoning above; that to do so would minimize the exposure to my callsign. And, I daresay, that to completely follow along with that reasoning and have it be valid and accepted as true and logical reasoning, then you would need to refrain from *any* post wherein my callsign is evidenced.

> ><---these attributes inserted

>
> Does the fact that the FCC does the above mean I have no right to say the
FCC
> is
> wrong?
>

You did not say that the FCC is wrong for issuing my callsign. You said my callsign is inappropriate for the ARS. It may be (and I wholeheartedly disagree with you), but it is not for you--as an individual and certainly as an amateur radio operator--to disassociate me from ham radio as an amateur radio operator by leaving off my callsign from something in which I have *intended* for it to be.

> <---this attribute inserted
> Is it wrong for me to tell people not to sign up for BPL and cite the
problems
> it has?
>

No. Not wrong at all. But, it would be wrong of you to delete a "name" someone goes by from a list of names in which people might be expressing their agreement or disagreement, simply because you disagree with the way it sounds or even that it might be risque. It would incorrect of you to delete or refuse to attribute their name to them for any reason.

> <---this attribute inserted
> Is it wrong for those who disagree with code tests to try to get the rules
> changed?
>

Not at all. And, I'd imagine that those who are so driven, are actively involved by contacting the appropriate agencies and departments and by active debate to state their cause and purpose. However, again, it would be incorrect for someone to keep a name or callsign (in this case) from a list in which they intended their name or callsign to appear.

>

If I *had* used it regularly, once in a while, or every so often, on the air, would that have changed anything here? I think not, so don't bother using it. Regardless, it is my callsign and I thought it would be listed when I originally submitted my prediction.

> <---this attribute inserted
> And if Kim wants to use it here, that's her right. But *I* don't have to
use it
> here.
> >>

Nope. You sure don't. But, it would be nice in the future if you caution that any amatuer radio operator, with whose callsign you disagree, who submits something with the idea that he/she will be listed just as everyone else, *will not* be treated in such a manner.

>

Why is my callsign such a shock? Forget any reason that someone might request it. I say that becasue, keep in mind that Michael (I think his name was) requested and had K2TIT because it was the closest he could come to commemorating the Tet Offensive. So, regardless of *why* someone might request it, why the shock that the FCC would issue it? The mere word "tit" or even the tit itself is not vulgar. Good heavens, if you think it is then I am the one who is shocked! The word is not intended to be used as a nickname on the amateur bands; Indeed, I have sharply offended people who have done that. The full callsign is all that is ever responded to, on the air anyway.

And, mainly, and the thing *everyone* always likes to ignore is that, yes, the callsign was requested by me on a dare. HOWEVER, it was a dare *after* I made the verbal observation that if I were to ever request a *VANITY* callsign, it would certainly be associated with something of vanity--not simply my initials. As you will recall, the most important part of that story--and it is a true one--is that a) I had never desired to get a vanity call, b) was mentioning to my fellow hams [men] on the air that it was a pity they had no more creativity than to simply request their initials and, c) that if I were to request a callsign it would be related to my "vanity." Anyone who knew me (and the all did) personally knew exactly what I was inferring by that comment. Were I as famous as Dolly Parton, it would be for the same reason she is--minus that I am a performer (I am not). My unique callsign is unique because it is a woman's callsign who knows that others perceive first in me, my tits. My intellect, beauty, wit, charm, rogue behavior, honesty in dealing with all humas and nature, and very, very opinionated nature all come secondary to the fact that, on initial gaze, I am a large titted woman. And, my callsign uniquely says, "get the hell over it, there's a person here to be reckoned with." If anyone does not like the way I *like* and *prefer* to relay that message, then tough titties (and they are not).

If anyone else (and here's your argument coming back on ya) *perceives* my callsign to be vulgar, that is *their* perception. It is not my intention. If anyone else becomes deragotory with my callsign, as Larry, Dick, Dave, Waddles/ULX, and others have done in this newsgroup; I daresay your problem is with them for they are the ones acting in a vulgar nature.

But, you do not have the right to deliberately disassociate my callsign from
me in a situation where I am representing myself as a ham radio operator

among other ham radio operators with like actions. We are all participating in the same poll, "The Pool." We are all submitting our ideas, and every amateur radio operator--but me--has had their submission listed with association to their callsign.

> ><---attributes inserted
> >But why do you feel that

Sometimes, censorship is quite appropriate. I think censorship of my submission would have been more appropriate, and respectful, than to add my "name" to the list with a submission of other amateur radio operators where their callsigns are listed.

> >>

> <---attribute inserted

To *you*, Jim and some others. Not to me, not Leo, not to some others. That someone gets, or even requests--doesn't matter--a callsign, it behooves you as a fellow amateur to respect that person as an amateur radio operator unless and until the licensing agency decides they cannot be an amateur radio operator any more. Note I did not say you have to respect that person as a person. I have absolutely no respect in any way for Larry Roll, Dave Heil, Waddles/ULX, and quite a few others actually. In fact I regard them

with pure disdain. However, they are amateur radio operators and no one outside the FCC as the granting authority, can take that away from them. And, as fellow amateur radio operators, they deserve my respect. *If* (and that is a big if) I ever had to encounter them on the air, I would regard them and treat them with the same respect that I have for every other amateur radio operator.

Even here in this area, when we had two proven fake Navy SEAL amateurs (proven by the organization that investigates that kind of stuff), and I was the only one who took them on as idiots, I never disrespected them on the air with rude remarks or insulting behavior. They would come on the air and call me names, try to scare me, deliberately violate nearly every R&R there is regarding transmission, but I never did the same to them. I refrained from communicating with them and would not respond to their childish, impish behavior. One day, the last transmission ever made on the air to either of them, I reminded one that the frequency was mine--which is proper operating practice and still gives them the *appearance* of respect as an amateur.

> -Because FCC is too busy with other matters and has too few resources.
>

I feel it is becuase there may be a thought in their mind that someone might be embarrassed to have a callsign like that--and that is very nice of them to carry out issuing the call as one that might cause embarrassment to someone. They do care. Even though callsigns are issued by computer, it's obvious someone looks at them, because there are some set aside, as you say. I think the callsigns like mine are simply set aside to be requested, rather than sequentially issued, because they may cause embarrassment to someone--or maybe would even cause embarrassment to the FCC if someone asked, "why in the world would you have given me such a call?"

>

No, his very general statement--in specific reference to activities on the air, I might add--about my callsign and other behaviors in the ARS (related, as I said, to on the air activities) could move the ARS one step closer to extinction. I happen to totally disagree with him. There is something about Riley that Larry doesn't understand, by the way, Riley offered his comments *as a person* not as an authority of the FCC. Big difference. The FCC officially has no remark on my callsign other than, when asked, to state that they do not legislate or regulate callsigns (something to that affect anyway--it was a long time ago that we had communication together).

It's also quite obvious that Riley is wrong. The ARS is still around, sitll healthy, and has even *gained* respect of important groups and agencies as a viable organization of people ready and capable to serve, if called upon to do so. The ARS is just fine and my callsign, nor the behaviors of idiots on the air, are moving it closer to extinction. There is not even a first step toward extinction of the ARS.

>

Why protest in an arena where the protest goes inactionable? Your protest to me will have no effect, whatsoever, in having me change my callsign. Even your refusal to list my callsign as an amateur radio operator with a submission, among other amateur radio operators with a submission, will have no positive effect on me changing my callsign.

You should simply stick to the argument that you find my callsign inappropriate. That is the strongest (even at its weakest) argument you can offer. To try and submit your actions as a demonstrable protest falls way short. At least in my opinion.

You have ostracized me as a valid amateur radio operator by refusing to include my callsign with my submission. You have ostracized me by treating my submission as an amateur radio operator differently than you treated a submission by any other amateur radio operator.

You have participated in ostracization (is that a word?) :)

My feelings are not hurt, by the way. I could actually care less about the issue of whether my callsign is on the list or not. However, the reason *I* am persuing this as a topic of interest will be revealed at the end of this post. <snicker> Not to minimize the input of my ideas: I am representing exacly how I think about the issue! I am just not hurt at all by the exclusion of my callsign from the list.

Exactly. Very few people are those whom I would consider "friends."
Certainly not someone I only have interaction with over the computer or even
amateur radio.

You have prevented my callsign being associated with other amateur radio
operators in a list where you treated them differently (by listing them with
a callsign). You have prevented, by mere omission of my callsign, me from
being viewed as an amateur radio among other amateur radio operators in a
list in which such omission could easily be taken out of context, I might
add.

> >>

However, you did not let anyone know, up front when the poll was first issued, that any inappropriateness would be looked for and dealt with accordingly. I submitted a prediction and do have the right and, feel correctly, expectation that my prediction would be listed just like every other amateur radio operator's.

My behavior on this newsgroup has always been blunt and honest. You could have even publicly said something to me about my callsign not be included and, as I would expect from you, asking if I would like not to particpate. That would have been so Jim/N2EY that I believe I have come to know. But, for some reason, your exhibited nature was not forthcoming here, and I don't know why--may not even be anything to it. But, I can see you posting a reply to my prediction that you would not be including my callsign--and would I like to withdraw.

> >><---attributes inserted

>

Now, for the real reason I decided to engage as I have the last couple of weeks. Remember, Jim, how I used to get so insulted when you would seem to

"lead" someone into a corner they could not get out of? Well, this thread, and the lack of your treating my submission as any other amateur radio operator's became my path to doing the same thing to you. Not out of meanness, mind you, not at all. Out of pure fun.

I feel you do lead, by way of artful argument by the way, people into corners they don't think they can get out of. This was my answer to that--because I really do feel I waited long enough (practically a year), acted often enough (giving you every opportunity to act as I would have thought you would act, and participated strictly as a submitter (I engaged in no comments until recently, and those only to request that you include my submission with my callsign). It is even uncharacteristic of me to get involved to this level (being listed among the debaters over the CW testing issue) with this topic.

As I said, I would have thought of your nature that you would see my submission, and let me know that you would list it but without my callsign, and give me the opportunity to withdraw inclusion. Does anyone else agree that this would have been something one could reasonably have expected from Jim?

Anyway, I feel victorious, but maybe it's just me. As I said, I really do have the opinions stated in this response and really do believe you should have offered anything but leaving my callsign off the list. But, my greater purpose was to leave you with that same, frustrated feeling I used to have when you'd box me into a corner I couldn't get out of. Maybe you don't feel boxed...but you sure were getting defensive and unexpectedly insulted--at least it looked that way to me in this post!

The purpose of any incentive license system is to offer rewards for learning more. More spectrum (more room to play in) is one reward that is *almost* universal. More power, IMHO, is far less of an attraction.
>

Certainly an option. But you'd face lots of opposition because it would mean
hams losing privs they have now.

>
>Who wanted to shut you down?

Carl, WK3C, for one. I was pointing out that a strong case can be made that the
Tech test contains all the theory and safety knowledge needed, and that most of
the General and Extra tests can be shown to be "hoop jumping" exercises if one

cares to look at them that way. I was politely but firmly asked to shut up
about it,
lest someone actually use those arguments with FCC to get the writtens watered
down still more.

That's my recollection of the exchange, anyway.

>We can discuss all we want. I'd
>be careful, however, with certain ideas presented officially
>to FCC.

Of course! But my main point was this: All of the arguments used against
the code test can also be reworded slightly and used against much of what's
in the written tests as well. It's already started.
>
>> The problem with such an "Appliance Class" license is that it cuts

>
>I'll ask again, what IS the experience in Canada. What "bad" things are
>happening or not happening?

I don;t know that Canada's B&P are the same as ours. One thing I do know is
that there are far fewer hams per capita there.
>
>> Some of the greatest experiences I have had in amateur radio have been

>That still leaves receiver circuits, etc to experiment with.
>In fact, no one needs any license to build and use their own
>homebrew receiver.

True. But most manufactured ham gear these days is transceivers.
And one of the simplest practical projects for the beginner is a
simple low power transmitter. The "appliance" newcomer would be cut off
from such projects.

This isn't a minor point! One of the key factors in developing what I call
"practical radio skills" is being able to start with very simple projects and
work your way up to more complex stuff.
>
>> > Allowing "homebrew" via an Extra certification process would
>> > foster positive relationships and Elmering (IMHO).
>>
>> Maybe. OTOH, having to get one's projects approved by another ham
>> slows
>> down the process enormously and could result in all kinds of trouble.
>
>As above, not ALL projects would need approval. Also,
>can you give an idea about "could result in all kinds of trouble.?"

Gladly. For one thing, the mere possession of an Extra license doesn't mean
the holder is necessarily qualified to judge the work of another ham *and*
said ham's ability to use a project.

For another, whose responsibility would it be if the "appliance" op got into
trouble with spurious emissions or such? Or got a shock?

>> Add
>> to that the fact that the current written tests are by no means

>
>You just created Catch 22. Based on your perspective, even Extras
>today shouldn't be allowed to homebrew without some additional
>"certification" because the current Extra syllabus is inadequate to
>ensure the Extra knows enough to homebrew.

Not at all! A homebrewer is responsible for the performace of his/her own
station. If there's a problem, guess who is responsible. Most hams will not
attempt a project beyond their ability for just that reason.

But to be responsible for someone else's work is a different thing entirely.
Particularly when the person you're responsible for is not under your
supervision.
>
>> And what problem does such an "Appliance Class" license really solve?
>> Do we have lots of problems here in the USA with homebrewing hams'

>at a certain license level.

My main concern is that we'd be setting up a new class of hams who
would be cut off from one of the main reasons to be a ham.

>hams (IMHO, YMMV)

But majority doesn't matter - remember? If they can make their case,
the mere fact that most hams oppose it won't mean a thing. Just
like with code tests....

Their argument that most hams use manufactured equipment that requires
no critical operating adjustments is pretty hard to argue against on an
"avoidance of interference" basis.
>
>> One of its rallying cries is that we need more new hams at any cost,
>> and not only is the code test scapegoated as a barrier, but also the
>> written test. That paper came from a NCVEC committee, too, and you can

>
>Has that paper been submitted as official NCVEC input to the FCC?

Not yet. But I understand that it appeared in the December issue of CQ.

(Anybody got a copy, btw?)

The paper outlines their plan in detail. In fact they imply that we hams should
not offer proposals or petitions until FCC issues an NPRM!

>> > > A lot of things we thought impossible have come to pass. Heck, FCC

Me too. Member since 1968. When Feb QST shows up, it will be the 445th issue
I have received as a member.

>I'll restate my position on the purpose of NCI as it
>relates to me. Once the code testing is actually gone, then I'll
>cease to be an NCI member as the goal will have been achieved.
>If any of the other NCI directors/members want NCI to
>continue on a different, expanded purpose, they will do so
>without me.

Understood!

But it has always been stated that once the code test goal was reached, NCI
would simply cease to function at all in those countries.

Kim ---> Jim has every right to not include your callsign in his messages.

Jim ---> Kim has every right to feel whatever she feels about that, and to
post messages which make her "feel victorous" in return.

In other words, you both have the right to make yourselves look like
laughable self-righteous sanctimonious twits, and you both are certainly
doing a superb job of that.

All the high-sounding babble about usenet attribution rules is exactly
that..... babble.

Attribute that.

With all kind wishes,

de Hans, K0HB

Dee's information is right on the money. Unless the person wants to have to take Element 1 again in the future, s/he should plan to upgrade to General within 365 days.

Yes, it's odd. An expired Novice license from 1952 is good for Element 1 credit but a 366-day-old CSCE isn't. But them's the rules - for now.

Sure you did.

Doing the ostrich bit keeps your thinking prim, proper, and along
the Established Paths of Amateur Righteousness. That will keep
you in the 1930s Standards and Practices of Behavior (with
allowance of solid-state electronics...to show "state of the art").

Feel free to emulate a high-quality SPARK transmitter that was
capable only of on-off keying. Keeps Tradition alive well and
unhappy into this new millenium.

Hiram forbid that you should ever try to use another (shudder)
form of modulation in the Archaic Radiotelegraphy Service.

Source record: 85546

There are just over 57,600 licenced amateurs here in Canda, out of a
population of around 31,000,000 - a similar ratio your US amateur
population vs. total population.

There are two licence classes in Canada: Basic and Advanced. The
Basic licence is limited to, among other things, commercially built
transmitting equipment manufactured specifically for use in the
Amateur Radio service (homebuilding of all other types of equipment is
permitted). An Advanced licence removes this restriction.

For further info, please refer to the Industry Canada Radio
Information Circulars, accessible via the following web site:

http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/vwGeneratedInterE/sf05478e.html

RIC-3 details the licence class info above.

Bob Gunderson, W2JIO, demonstrated that blind people could
do all sorts of radio construction. Blind himself, he devised ways
to do almost every imaginable radio task without sight - including
tasks like soldering and reading meters. And this was before WW2.

There's a reason for that. In many applications, analog displays are preferred. For example, when adjustment for minimum or maximum is needed, or when a quick glance is all you can spare.

Remember when carmakers started making digital speedometers - and then found drivers didn;t like them because it took longer to get a reading?

Some of us even prefer an analog dial. Hopwever, my favorite mode is digital.

No, it was not.

>You appear to simply be trying to revive the code/no code arguement.

"Revive?!?"

Who said it "died?!?"

Destroying the code test requirement is a never-ending battle.

>My belief is that if the FCC enforcement bureau had
>not largely been disassembled, we wouldn't have the problems we do now.

?

Since WHEN was the FCC enforcement "stopped?"

FCC was very busy ENFORCING US civil radio ever since the end
of WW2. It's in the Reading Room at the FCC building if you care
to research it.

Your complaint should be rewritten to say the FCC "did not enforce
amateur radio ENOUGH"...to satisfy the purists and the prissy
olde-tymers who wanted to keep the standards and practices of the
1930s alive and well.

>If
>we were to dismantle the police department of NYC and the murder rate shot
>through the roof, would you blame the drivers who insist everyone should
>stop for a red light?

When in heck did the laws of New York City come under amateur radio
regulations?!?!?

You got a problem with NYC law, you take it to the NYC DA, okay?

>You are seeing the same situation everywhere in society today.

Yeah...all those prim, proper, pejoartive-pushing anti-sex-term
purists babbling like eco-destroyed brooks about callsigns!

Ptui.

>Nothing
>wrong with selling drugs to make some money, except, of course, for the
>stupid drug laws.

You had a bad toke or something?

This is NOT about "drugs" or "drug laws," Jim, nor is it about prim,
prissy, puritans forbidding sexist terms in callsigns. Geez!

>'Cmon, now, you can do better that that!

When someone PAYS me for my words, you can damn well assume
the words WILL be better.

You sure as hell need to think some more about what YOU said.

>long ride.

So, as the "insider" you don't consider consideration of the "ARS
Community" to be important?

Just on the petition comments alone, FCC has nearly twice the
documents that 98-143 had already and NO NPRM has yet been
issued.

If and when an NPRM on code-testing appears, the commentary
received is going to be gigantic in my estimation. It will make the
four-year-old-plus comments on 98-143 seem paltry in comparison.

>>The current salad bowl of 14 (15?) petitions is primarily concerned with
>>Morse testing for HF access. I've already commented on that matter.
>
>So did I.

There are 4,661 documents on the 14 petitions. What is your
percentage of the total?

>Perhaps my preference for doing a job once rather than nickel-and-diming it to
>death is showing in that I think a more comprehensive approach (like your
>proposal) is better. But that's just me - and it's *your* proposal anyway.

Perhaps you don't care to spend the time and effort to reply/comment
on all 14 petitions?

Did the FCC "lose" some of your comments? I don't see 14 comments
under your name. [it's all public, you know, no "google" needed...]

>My main concern is that if you wait until the Morse Code test issue noise dies
>down, it may be a long wait *and* there may be an addy-tood of "oh no, we're
>not going to reopen THAT can of worms again". Meanwhile, really bad proposals

I dunno. The "Archaic Radiotelegraphy Service" name change would
be appropriate. It's the last US radio service to require absolute CW
testing for entry into the sacred halls of hiram. Tradition. Honor.
All in line with The Service and that sort of pomp.

I can just imagine the front yard at Newington at sunset. All the
"servicemen" assemble in ranks...the League flag is lowered slowly...
W1AW fires up and plays the Retreat tatoo over the public address.
All salute the gold-plated J-38 on its marble pedastel.

Snif. All that emotion.

>first and last name, just first name, etc?

Actually, none of the above. :-)

Had I made any prediction (I didn't), such would be swallowed up
by a great deal of supurfluous, gratuitous misdirection by at
least two others. One would be a lot of pejorative perforations of
his own ulcer by the resident gunny-sack sergeant. The other
would be Herr Robust scowling squintily through his monocle and
babbling about "interest" and "no experience." :-)

The Amateur Formerly Known As Reverend Jim would have gone off
on a tangent, hyperbole at the ready, and consigning me to the
"in error" category somehow. It would stuff his sinusoids to his
adenoids.

>You cannot, on one hand, state that my callsign is a bad thing for the
>ARS--and you did state that--then, on the other hand, state that you have no
>prejudice. You *do* have prejudice and you demonstrate it every time you
>delete my callsign from a post. I've never (ahem, never) noticed if you
>keep my "signature" to my posts when you are replying to them, Jim. Do you?

Note: The Amateur Formerly Known As Reverend Jim sometimes
OMITS a "signature" on his own postings! [as Google is my witness
that is true!] Why a "signature" is needed on an all-typed-in post
is a mystery to me...the message header has all the information
already. :-)

Kim, as far as I'm concerned and as far as the LAW is concerned,
if you have a valid US amateur radio license with a specific callsign,
that's all that matters.

But, there's all these prissy, pompous hypocrites in here, all claiming
the Last Word and trying to act like a raddio version of Judge Roy
Bean.

The Amateur Formerly Known As Reverend Jim will never apologize.
He OWNS this newsgroup by squatter's rights. That alone gives
him some kind of immaculate right...right as in righteousness.

<more snipping...>

>> Sure. Don't I have the right to do that?
>
>No. You don't. Not in a "general" list you are compiling, where you have

>you do or not--have the right to *disascociated* me from my callsign.
>Period. But, especially in a list where you've invited people to join, yet
>you did not say anyone would be listed in any way differently than anyone
>else.

He feels an eminent right to do whatever. Noblesse oblige or something
like that...the "divine right of kings." :-)

>You did not say that the FCC is wrong for issuing my callsign. You said my
>callsign is inappropriate for the ARS.

He KNOWS what is "right." He IS the ARS. :-)

>Not at all. And, I'd imagine that those who are so driven, are actively
>involved by contacting the appropriate agencies and departments and by
>active debate to state their cause and purpose. However, again, it would be
>incorrect for someone to keep a name or callsign (in this case) from a list
>in which they intended their name or callsign to appear.

They are "driven" by a terrible need to Win A Newsgroup Argument!

Nothing else matters. All who do not agree with them are "faulty,"
"in error," etc., etc.

<snip>

>If anyone else (and here's your argument coming back on ya) *perceives* my
>callsign to be vulgar, that is *their* perception. It is not my intention.
>If anyone else becomes deragotory with my callsign, as Larry, Dick, Dave,
>Waddles/ULX, and others have done in this newsgroup; I daresay your problem
>is with them for they are the ones acting in a vulgar nature.

They are:
1. In the right because they are olde-tyme morsemen.
2. They are misogynists and haven't gotten laid recently.
3. They can't "lose face" by admitting defeat in a newsgroup argument.
4. All of the above.

Good grief, all of the wordy postings by a lot of posturing righteous
ones on this whole subject!

Kim, the FCC authorized your license and your callsign. Nobody
"authorized" these prissy pompous pejorative-tossing hosers
anything they said. But, they won't quit trying to make fun of you.
Mighty Macho Morsemen won't quit until the last code key is
torn from their cold, dead fingers.

Yeah but, following this new "history" of amateur radio, technology as
we know it today might not be the same. There might be no other
"services" to give up spectrum, seeing as how amateur radio has
pioneered much of the technology that people these days take for
granted.

Tsk, tsk, tsk, tsk.

Len, you are
completely mistaken.
>
> As the restructured amateur radio regulations of 2000 are
> concerned, the "forever" is going to be over in just about 6 years.

How do you know that,
Len? Do you have a
crystal ball that tells
you how the Federal
Communications
Commission will
change the rules in the
future? Because the
current rules do not
support anything you
wrote.

Here are the facts:

1) The Federal
Communications

Commission has
continued to
renew Novice
licenses as Novice
right through the
rules changes of
2000. There are
currently no pending
plans for that to change.

2) The same is true for
Advanced class
licenses being
renewed as Advanced.

3) Novice licenses, current
or expired, convey
Element 1 credit for the
person who earned them.

Len, it appears that you have become
so desperate for attention in this newsgroup
that you will stoop to posting inaccurate,
false and mistaken information just to see
if anyone is still reading your ramblings here.

Poor, poor, misguided baby Len.

The answer is that there are a few who still
read your posts. Many others have killfiled
you because of your behavior.

Most of the time we simply ignore you, Len,
because you're simply not worth our time
or energy. Our reaction to you has moved
from interest, to anger, to disgust, to sadness
and finally to indifference.

I have only bothered to post this reply
because someone might mistakenly
think you know what you are talking
about. You do not know what you are
talking about, and your information
is worthless.

You may claim you were merely making
a prediction, but there is no indication
of that in your post.

Now you can get all upset and SHOUT some
expletives at me. You can rail and fuss and
fume over my being anonymous. You can
clame that your posting was merely "a trap"

and your poor grammar as some sort of
"Proof". You can repeat your mistaken,
incorrect, misleading, false information and
otherwise carry on in typical immature,
spoiled-brat Leonard Anderson fashion.

And even more people will ignore you.

But for the record: You are mistaken.

>
> Sic transit gloria mundi.
>
> WMD

You may call yourself "WMD" but all
you have destroyed is the respect
anyone here ever had for you.

P.S. Don't bother trying to find me. For I am already gone.

> service. (snip)

"That is authorization to operate on those frequencies" to do what, Dee? The only answer is "public service" in this context. When it comes to Amateur Radio, we perform our public service using the Amateur Radio frequencies. And the FCC is the governing agency that says what is authorized on those frequencies (not everything is - your license is not a blank check to do what you want with the Amateur frequencies). For example, when it comes to the walk-a-thon you mentioned, the FCC has set rules on what is and isn't authorized in that situation. The same with your power blackout situation. And the same with ARES. In other words, you are only allowed to use your radio in situations authorized, and in the manner authorized. One situation authorized is public service.

> (snip) That does not change the fact
> that there is no mandate to do so.

Again, the words mandate and authorization are synonymous.

For upgrade purposes, 365 days, just like any other element credit on a CSCE.

For operational purposes, forever (until the next rules change or you lose the document and have no proof of ever having passed code).

> Jim,
>
> Personally, I feel that it is indeed unfortunate that you do not see,
> or will not admit to, your disrespectful treatment of Kim,

[callsign deleted]

Your opinion noted, Leo. However, after much consideration, I do not
consider my omission of Kim's callsign to be disrespectful. YMMV.

> Your statements in defense of your conduct are based entirely upon
> circular logic, rationalization, contradiction and denial - indicating
> that you are not prepared to accept responsibility for your actions
> towards a fellow ham here on the group.

Basically what you are saying is that I should accept Kim's callsign
as appropriate for the ARS, and use it here, because:

1) FCC issued it
2) She asked me to
3) *You* don't 'have a problem' with the callsign, and therefore *I*
shouldn't, either.

As I have stated before, no disrespect was intended. But I am not
going to use Kim's callsign in my posts, because I think it is
inappropriate for the IRS.

You can use it in your posts all you want. So can Kim. I won't try to
impose my standards on others, even though they try to impose their
standards on me.

[Kim a licensed radio amateur]

> told you straight up that she felt disrespected by your actions.

I have felt disrespected by her action in choosing that callsign.
I told her that straight up a long time ago.

> A simple apology to her would have been appropriate.

I apologize if my posts have upset anyone. That was not the intent.
But I will not compromise my standards on this to avoid hurting
someone's feelings.

> The right thing to do.

In your opinion. Mine's different.
>
> Jim, you have been a frequent victim of attack and insult here
> yourself - frankly, you should know better.

Where is the insult in not using a word or phrase I think is
inappropriate?
>
> Insulting a fellow amateur publically, then denying and justifying the
> act with a litany of self-serving rhetoric.

I don't see it that way at all.

> Do you believe that these
> actions, your actions, are in the best interest of the Amateur
> service?

Yes. You may disagree, but I will not describe that disagreement
as "prejudice", "censorship" or "self-serving rhetoric".

> I suspect that few here join you in that belief.

Doesn't matter. Your quote below is quite appropriate. At times, Dr. King
held standards and beliefs that were not popular. His adherence to those
standards and beliefs was considered "insulting" by some. Should he have
listened to them, or followed his conscience?
>
> "The ultimate measure of a man is not where he stands in moments of

Rev. Dr.

> Martin Luther King, Jr.

And at this 'time of challenge and controversy', I say that Kim's
callsign is inappropriate to the ARS, and I will not repeat it
in my posts. No insult is meant by this action. But it will not
change.

I don't use the term "friend" to describe Kim, because she reserves
that word for a very select group, and I respect that choice of hers.

But I will say that one of the characteristics of a true friend is
telling the truth as the true friend sees it, even if it is not
what someone wants to hear, and even if a person may get their
feelings hurt or feel insulted by that truth.

That I can answer - in part: All Hallows Day (November 1) is "The Day of the Dead" and may also have represented the end of the fall harvest. The dressing up as "evil" things (zombies, ghouls, then later, witches/warlocks and such) sources from that. How it became corrupted to permit anyone to dress up as ANYTHING like aliens, Superman, Princess Leia, etc., I cannot be certain of but is most like the result of corporate greed, advertising, and the fact that "costume party" (at least for adults) is what people really remember.

> birth of Christ.

There's a little more to this. Saint Niclaus was also the patron saint of children. It wasn't so much the time of year but the act of giving toys that was connected to him. Since children didn't have organized school then, giving them something to do during the winter when they couldn't play outside due to the weather (snow) led to toys at the beginning of winter - and guess what time of year that was. I don't believe that the tie-in to the birth of Christ was foremost but more coincidental.

> Up next: Q sign for Martin Luther King day: QMK

I think the most appropriate sign for this group is QFU. It is certainly screwed.

Then change your callsign to something appropriate to the ARS, Kim.
>
> If Len Anderson, for example, submitted his prediction of a date that CW

Who is Len Anderson? ;-)

Why should I care ;-) ;-)

> a) would you insert his submission,

Maybe. Maybe not.

> b) don't you find his whole general nature abhorrent

Yes. His behavior is very inappropriate - even to Usenet.

> and would you insert his submission anyway

Maybe. Maybe not.

> and, c) would you insert his
> first and last name, just first name, etc?

Depends. He has used so many different screen names and signatures...

> You cannot, on one hand, state that my callsign is a bad thing for the
> ARS--and you did state that

I said it was "inappropriate".

That's my opinion. YMMV.

>--then, on the other hand, state that you have no
> prejudice.

Your choice of callsign is inappropriate and I have no
prejudice in the matter.

See? I just did what you said I cannot do.

> You *do* have prejudice and you demonstrate it every time you
> delete my callsign from a post.

Not prejudice. Standards that you disagree with. Calling my
standards prejudices is inaccurate.

> I've never (ahem, never) noticed if you
> keep my "signature" to my posts when you are replying to them, Jim. Do you?

Look and see.

> Or is my callsign just as offensive then as when I *intend* to include

So you're saying that everyone who has a callsign has the right to
have
that callsign included. Yet you don't mention Larry's callsign in this
post....

> The one thing that Larry Roll has never, ever done--to his credit
> arrrghhhh, yes I said that--is "strip" me of my callsign. You have, Jim,

Then you failed, because I don't have that feeling at all. Sorry ;-)

> Maybe you don't feel
> boxed...but you sure were getting defensive and unexpectedly insulted--at
> least it looked that way to me in this post!
>
> Kim

[inappropriate callsign deleted]

So let's recap:

With just a few posts, I was able to get you and others in a long,
lengthy
and involved debate that had *nothing* to do with code testing.

I exposed how some folks want *me* to follow *their* standards
rather than my own.

I even got you to admit something good about K3LT.

And through all that I avoided any name-calling or use of inappropriate words.

So I quote Maximus in the arena, surrounded by those he has vanquished, as he says to the crowd:

"ARE YOU NOT ENTERTAINED??!!!"

73 de Jim "My name is Gladiator" N2EY

Well, Keith, UR free to contribute what you think it *might* be like!
It was an exercise in imagination.

As for things being different, no kidding!!!!! That was the idea! What
would happen? What would the new amateurs use in the way of modes and

the like?

Use of imagination is seen in things like the few posts that Leo and I made on likely modes and licensing methods.

Lack of imagination is shown in posts just saying "things would be different, so there is no use speculating".

Far as I know, there are no Newsgroup rules, only habits and widely accepted conventions. Any one who takes exception to exceptions, is certain to accumulate an exceptional quantity of exceptions. If you are starting a collection, I have included three above.

With all kind wishes,

I don't respect you. You are a liar...a documented pathological
liar.

> I've never stated any "boldface lies." This web browser doesn't allow
> selection of boldface type.

Sure you have. That you don't accept responsibility for them is
moot. They are here. No more need be said. You're busted...over and
over and over and......

> and allowed RF output power. you can't use it on "ANY" band.

tsk, tsk, tsk, Lennie.

Where did I say "40KW" or "600KW", Your Sliminess?

I paraphrased your "great power" and then cited that I hardly
ever use more than 200watts.

With very few exceptions, I can use 200 watts where I please.

And by the way, Anderscum, would you care to share a copy of the
station licensed where YOU were authorized those powers you
cited...???

I can show you MY station license and quote for you the
paragraphs that stipulate how much power >>I<< can use.

> > Of course, unlike YOU, I have a station license that allows me to

> wrapped CB transceiver "it's not my own radio?"

Sure it is. And you can have fun allllllllll day chatting with
foul mouthed truckers, 10 year old space cadets and rogue taxi cabs.

> Okay, if I own a Cessna 182 and buy a Civil Airways VHF Comm
> transceiver and install it, "I wouldn't own my own transceiver?"
> Who would own it? FAA? USAF? An airlines corporation?

Sure...ALLLLLLLLLL yours. No station license, of course, unless
you file for one from the FAA and obtain the Restricted Telephone
Operators Permit and intend to use the aircraft outside of the
territorial United States.

And while you're at it, just pick any old random frequency and
call "CQ" while you're at it.

> If I have an ocean-going sailboat and buy the "civilian" version of an
> SBC-2020 and install it, "I wouldn't own my own radio?" Who would
> own it? SBC? USN? USCG? A cruise line corporation?

Sure it's yours, Lennie. Still no station license unless you
operate it outside the United States...And THEN only (STILL "only") on
the fixed maritime frequencies with a type accepted rig. (Enjoy
plunking down those bucks, Lennie....You earned them...)

> If, as a private businessman, I buy several transceivers to put in my

> them? The store I bought it from using a valid credit card?
>
> Oh, yeah, the only "real radios" are ham radios where everyone
> works DX on HF with CW.

Lennie, if you went on a buying spree RIGHT NOW, and bought one
of every radio that you could LEGALLY operate without a document from
the FCC, you'd still only have enough bandwidth to fit inside the 10
meter Amateur band.

I, on the other hand, can buy those SAME radios, thereby not only
having the entire AMATEUR allocations to play with, but all those SAME
services in which you might operate, and yet again would have more
OPERATING privileges than you do right now.

> >> Of course, any former E-5 or higher that thinks "asshole" is a

>consider my omission of Kim's callsign to be disrespectful. YMMV.

As stated before, it wasn't your omission of Kim's callsign that was
disrespectful, it was the context that it was done in - omitting hers,
but leaving everyone else's intact. Repeatedly.

As you are aware.

>
>> Your statements in defense of your conduct are based entirely upon

>
>1) FCC issued it
>2) She asked me to
>3) *You* don't 'have a problem' with the callsign, and therefore *I*
> shouldn't, either.

No - I said that Kim's callsign IS a valid one, accepted by the FCC
for use in the ARS. You can dislike it, revile it, be insulted by it
- whatever you choose to do. But, you must respect the fact that it
is a valid amateur callsign - because it is! Just like yours, issued
officially by the FCC.

Jim, you aren't the guy who gets to determine what is or is not
appropriate for the ARS. That role belongs to the regulatory
authorities. Whatever your problem is with this particular call, it
is between you and the FCC - not us! If they declare that it is
inappropriate, then it will be withdrawn. If not, it stays. Whatever
it is - it's their decision - not yours and mine!

As you are aware.

>
>As I have stated before, no disrespect was intended. But I am not
>going to use Kim's callsign in my posts, because I think it is
>inappropriate for the IRS.

In your opinion, Jim - not necessarily the opinion of the FCC, or many members of the ARS. However, no one is trying to say that you must use Kim's callsign in your posts - the issue is with your intentional exclusion of only her callsign from your list!

As you are aware.
>
>You can use it in your posts all you want. So can Kim. I won't try to
>impose my standards on others, even though they try to impose their
>standards on me.

No one is attempting to impose standards upon you, Jim. The message was (quite clearly) that it is inappropriate and disrespectful to omit just this one callsign from the pool, while leaving all others intact. As you well know. And as clearly stated in previous posts.

As you are aware.

>
>[Kim a licensed radio amateur]
>
>> told you straight up that she felt disrespected by your actions.
>
>I have felt disrespected by her action in choosing that callsign.
>I told her that straight up a long time ago.

Not sure I understand why you would feel personally disrespected by Kim's choice of callsign, Jim - I don't imagine that she did it to offend you personally.

You are of course free to express your opinion regarding this issue, however - but to do so in public isn't always a wise choice. Would you walk up to someone in a crowded mall and tell her exactly what you thought about their skitr being too short? Of course not - that would be impolite. And not too smart, perhaps - she might smack you! :)

Some opinions are best kept to one's self :)

>
>> A simple apology to her would have been appropriate.
>
>I apologize if my posts have upset anyone. That was not the intent.
>But I will not compromise my standards on this to avoid hurting
>someone's feelings.
>
>> The right thing to do.
>

>In your opinion. Mine's different.

Compromising standards isn't the issue, Jim. As you are aware.

If you had changed your poll to list everyone by their first name, would that have compromised your standards? Of course not. It would have created a Level Playing Field, and caused little fuss at all.

It would have removed the opportunity for you to try and punish Kim for her poor choice of callsign, though - say, you weren't trying to do that, were you? Of course not - your standards are too high for that......aren't they?

>>
>> Jim, you have been a frequent victim of attack and insult here
>> yourself - frankly, you should know better.
>
>Where is the insult in not using a word or phrase I think is
>inappropriate?

As stated above, and in previous posts - it is a situational thing. For example, yelling "Hey, Dick!" to a friend sitting over at a bar is quite appropriate. Yelling "Hey, Dick!" to some biker sitting at the bar is not. Same phrase - totally different intent. Context is everything!

As you are aware.

>>
>> Insulting a fellow amateur publically, then denying and justifying the
>> act with a litany of self-serving rhetoric.
>

>> service?
>
>Yes. You may disagree, but I will not describe that disagreement
>as "prejudice", "censorship" or "self-serving rhetoric".

What part of this statement are you having trouble with, Jim?

Definitions (and specific usage within the thread):

Prejudice: "an opinion formed beforehand" (your opinion that the callsign W5TIT is inappropriate to the ARS)

Censorship: "the supression of something considered objectionable" (like the intentional omission of just one callsign in a list, perhaps?)

Rhetoric: skill with language - (ahem)

>
>> I suspect that few here join you in that belief.
>
>Doesn't matter.

It certainly should!

>Your quote below is quite appropriate. At times, Dr. King
>held standards and beliefs that were not popular. His adherence to those
>standards and beliefs was considered "insulting" by some. Should he have
>listened to them, or followed his conscience?

Dr. King was a champion of equality and equal rights - a mission which cost him his life. He was dedicated to ensuring that people were treated equally, regardless of the "personal standards" of those who felt that they were not entitled to equal treatment.

Do you treat everyone equally, Jim? Even when you have a strong bias against some characteristic of theirs that you find objectionable? No matter what?

I'd refrain from drawing parallels to Dr. King until you can state that unequivocally. Without prejudice.

>>
>> "The ultimate measure of a man is not where he stands in moments of
>> comfort and convenience, but where he stands at times of challenge and
>> controversy."
>

>
>And at this 'time of challenge and controversy', I say that Kim's
>callsign is inappropriate to the ARS, and I will not repeat it
>in my posts. No insult is meant by this action. But it will not
>change.

Once again, no one is forcing you to use the dreaded callsign in your posts. Again, Jim, the issue is singling out one individual because there is something that you don't like personally! As you well know.

One's principles and beliefs, however righteous and sacrosanct, do not convey the right to treat others disrespectfully.

To return to the quotation from Dr. King - in this time of challenge and controversy, someone might choose to admit that they was wrong in singling out one individual due to personal opinion, and revise his list to indicate equal respect for the status of all participants. Someone else might choose to twist the words and concepts around ad infinitum to justify their actions. Still another would take the moral high ground, and justify their actions based on rigorous personal standards and ideals.

Which of these represents the Right Thing To Do? I know.

So do you, Jim.

>
>I don't use the term "friend" to describe Kim, because she reserves
>that word for a very select group, and I respect that choice of hers.
>
>But I will say that one of the characteristics of a true friend is
>telling the truth as the true friend sees it, even if it is not
>what someone wants to hear, and even if a person may get their
>feelings hurt or feel insulted by that truth.

An excellent homily, Jim - but with a fatal flaw. True friends would conduct this level of personal information interchange only in private, and with compassion, sensitivity and dignity. A true friend would not choose to do that in a public forum, would they, Jim?

As you well know.

And, as we are all quite well aware.

>authorized. One situation authorized is public service.

Dwight, throughout ALL of Title 47, Code of Federal Regulations,
the word "service" is a regulatory term used to denote the type
and kind of radio activity being regulated.

Too many self-enobling amateurs wish to wrap themselves in the
finery of some kind of "patriotism" or "good works" and say they
do their hobby activity "for the public good."

AMATEUR radio is, de facto, a hobby, a recreational activity
involving radio transmission, done without pecuniary interest.

There should be NOTHING WRONG with having a fun hobby just
to have a hobby. One hundred seventy thousand members of the
AMA use a number of 72 MHz frequencies for model radio control.
That's purely a recreational activity. Not one whit of "public
service" about it, no dreaming about being a "service to the nation"

by using those allocated, authorized radio frequencies.

Anyone thinking that amateur radio is "primarily about public service" is deluding themselves and/or living in a fantasyland of daydreams. Amateur radio is a hobby. It was never anything else and it may never be anything else. Why should it be more than a hobby?

I've never needed a "license" to do jury duty, yet I've done it four times. I've never needed a "license" to be a court witness yet I've done that once. I've never needed a "license" to contribute to a charity or be a hospital volunteer or anything else to do REAL public/civic service. Anyone physically capable can do all of those things without any "license" or "special authorization/allocation" by some "authority."

The five volumes of regulations on Title 47 C.F.R. concern normal operation of all the US civil radio services, its operators, and the structure and activities of the FCC. The authorization/allocation of ALL services is specifically stated therein. For those wishing to get into REAL public service radio, that is mostly in Part 90 under Public Safety Radio Services.

Part 97.1 "Definitions" does NOT specifically "authorize public service" nor is it in any way some kind of Important Noble Medal surrogate to wear/show-off/brag-about. 97.1 is basically old, standard political boilerplate CHAFF, words to use as political radar screening (a time-honored American law tradition even if the names of it vary) to INFER a raison d'etre for the radio service.

Political chaff is very important in lawmaking. It carries with it a fantastic amount of emotional baggage...but all that baggage is essential to the creation of whatever the law is defining. A particular activity being legislated cannot readily exist without all that baggage. That kind of baggage gets politicians elected and it lets those politicians enact legislation that is so "important" to some of the citizenry.

While all the radio amateurs - and especiall the league - were busy thumping their gorilla chests to beats of self-importance rhythm, the AMA quietly lobbied for, and got a number of R/C frequencies. Not for any national "public service" to "do good works" or anything else except make several thousand model hobbyists happy. Nothing in there about "pioneering flight" or anything else pretentious, just for a recreational hobby, to have fun, to enjoy themselves.

The membership of the AMA is approximately equal to the member-ship of the ARRL...170 thousand each. Isn't that curious? :-)

The AMA (Academy of Model Aeronautics) doesn't constantly pretend to be anything else but a hobby membership organization, affiliated internationally with other model hobby organizations. ARRL on the other hand is terribly self-pretentious with a constant PR of

self-importance, "radio pioneering" and general self-grandeur.

Amateur radio transmissions fall under the federal laws concerning United States civil radio. Such are given specific regulations by the FCC. That isn't enoblement "to do the public good," it is merely a separation of the various radio activities for regulatory purposes.

Trying to draw "conclusions, authorizations" from the first part of Part 97 - for any reason - is like saying all politicians' statements are "true." The definitions of 97.1 are just general statements, political chaff (or any other spin-equivalent name you want) of the old style to justify the existance of the radio activity in the political arena.

Source record: 85499

RAC Bulletin 03-034E - Canadian Amateurs may lose part of the 220 MHz band

After studying the spectrum needs of various services over the past 18 months, the Radio Advisory Board of Canada (RABC) has decided to recommend
to Industry Canada that the 220-222 MHz band be transferred from the amateur
to the mobile service. The RABC also recommends that:

- - Amateur repeaters in this portion of the band be grandfathered to continue
operation for a number of years, with the number to be decided by Industry
Canada.

- -A section of 150 kHz of spectrum in the 220-222 MHz band be designated as
public service spectrum to be shared by amateur and mobile services for special public safety and disaster communications applications.

- - The band 219-220 MHz is allocated on a secondary basis to the Amateur
service in Canada, which would be in harmony with a similar allocation in
the USA.

- - The band from 222-225 MHz remains as a primary exclusive amateur allocation.

Following consultation with Canadian amateurs in a survey conducted in July
2002 RAC, as a member of the RABC, has vigorously opposed these proposed changes without success.

Industry Canada must now take this advice, together with input from RAC, decide on a course of action, and in all likelihood conduct a public consultation before issuing a decision. The prospects do not look good. For the full story, visit the RAC web site at
http://www.rac.ca/news/canada.htm

Jim,

This is really uncharacteristic of you. I am amazed that a well
educated man like yourself would publically take pride in the above,
given the behaviour that started it off in the first place.
Bully-like behaviour, Jim? I wouldn't have thought it possible.

That's some set of flexible personal standards you have there.

Only if the code requirement is abolished in less than 365 days. Keep in mind that some of the petitions filed do call for keeping code for General or Extra while letting the Techs have some limited HF privileges. With the speed with the FCC is not moving, less than a year from now seems rather iffy.

Dwight, do you read and understand what you write prior to mashing the
<send> button?

If there is nothing mandat(ory) about something, how can it be a
mandate?

A mandate is a command, *requiring* a certain action.

An authorization is a grant of permission, but does not *require* an
action.

Of course, those quotes don't reflect anything said by me. Instead, I said public service is a key component of the basis and purpose of this radio service (97.1a).

Obviously, Len. We were talking public service relating to Amateur radio. Nothing said precludes public service in some other means or manner.

Princeton University's WordNet...

http://www.cogsci.princeton.edu/~wn/

Click on "Use WordNet Online" and enter "mandate." Notice the word "authorization" right next to it for the first definition. Notice the word "mandatory" next to it for the second definition. Mandate and authorization are synonymous in the context used.

Ummmmm, that's quite standard for this newsgroup.

>
> I exposed how some folks want *me* to follow *their* standards
> rather than my own.
>

Not at all. I didn't see that. Your angst was for the fact that someone changed attributes in a post. For that, you are wrong; as I am. It doesn't matter *why* the posts are getting changed; that part of the debate was mere distraction. Fact still remains that you bitched at me for something you, yourself, have been doing.

>
> I even got you to admit something good about K3LT.
>

There's something good in everything...and I do mean everything. For each and every action, there is an equal and opposite reaction. Most people take that to mean good=good and bad=bad. It can also, and more often, mean good=bad and bad=good.

>
> And through all that I avoided any name-calling or use of
> inappropriate words.
>

Typical behavior for you. Although, the implication of you being a leg man--and stating so in such a way as to imply something sexual about it, also defeats your whole stance of removing inappropriate things from posts you take part in. But, you can be contradictory--that's OK.

>
> So I quote Maximus in the arena, surrounded by those he has

As I said, you've been changing my original posts for over a year now (by deleting my callsign from them--by the way, that was just pointed out to me by someone else a bit of time ago--I've been "watching" since) so if you want to get offended, upset, etc., about changing posts then be upset at yourself first. Whether by changing attributes or deleting things from original posts--both a) are supposedly against standard conventions of newsgroups/Usenet and, b) both could be strewn to be disrespectful, deceitful, inappropriate, incorrect, and causation for a long debate. You began the behavior before me, I trumped it.

As I said, you may not "feel" boxed. However, you have been just uncharacteristic enough in several examples that I am quite sure you were, in some way, caught up in being very defensive over something you did. I remain with a feeling of debate victory...

However, there is something rather interesting about the thread the last few days: it's obviously had Hans occupied.

Mandatory is only one definition, or contextual sense, of the word "mandate," Hans. There are others.

> An authorization is a grant of
> permission, but does not
> *require* an action.

A mandate does not always "require" action. For example, a people can give a mandate to their elected leaders, but those leaders are not required to follow it. For example, the people can give a president a mandate to raise taxes to finance schools, but he can finance those schools some other way. In that sense, the people have their president an authorization to act, not a requirement he must follow.

No, I'm not. Contrary to what some may think, I don't follow each of the discussions here. I trash about half the threads without even a glance. A good chunk of the remaining threads get trashed after I've read only one or two messages to see if I'm at all interested. And, finally, of the remaining threads, I certainly don't read all messages. The only name I've seen recently relating to Jim is Len's "Rev. Jim," and I'd hardly call that a great insult.

Fascinating stuff!

Note that the totals shown are for the entire database, including
licenses that have expired but which are still in the grace period.
Station-only licenses (like clubs) are also included.

The numbers I post in "ARS License Numbers" are the unexpired total of
individuals only.

I'm not in disagreement over the use of manners.

> manners to be an unwelcomed human attribute, now described as political
> correctness by those people.

Sadly, some people attempt to forge a tie between the terms "polite" and
"political correctness". There is no link between them. Jim didn't
treat Kim's callsign badly; he didn't use it at all. After all, it
could be easily argued that Kim didn't treat amateur radio with respect
in choosing her call.
A number of us believe that her choice was tacky and tactless.

It might say something about their character but it doesn't say anything negative about it. The FCC looks the other way with regard to language used in prime time television these days. If I object and state that I find the use of such language to be offensive, it says nothing negative at all about my character. The FCC often does and often has abdicated its responsibilities in a number of areas. That it does so, does not confirm the correctness of those inactions.

And ... a code CSCE is only "good" as follows:
1. For upgrade to General, one year. However, once a General, then the
element is part of the General package and allows upgrade to Extra
without the one-year deadline or retaking.
2. Without upgrade to General/Extra, the element allows "Tech Plus"
privileges, which were the bands and frequencies alloted to the Novice
ticket, for as long as the holder remains a Technician.

It would seem that all of those are questionable. Thanks though, for proving my point.

> And, if I've made a post I'VE OBVIOUSLY CHANGED IT OR AM JUST PLAIN
> REPOSTING IT. What is so hard about that?

It isn't hard at all; it is evident. It is also wrong.
I dropped a word used by you in my comments above. It is clear from this post that *you* did not drop the word and that I did so.

> Jim refuses to put my callsign
> associated with my prediction.

Good for him. Live with it.

> I will add it whenever I feel (yeah, one of
> those "feeling" things you know nothing about) like it.

I wouldn't want you to get tangled up in reality or fact, Kim.

Here's an example for you, Kim, just for purposes of illustration:

> I know that I often post before taking the time to think things out and have often > been guilty of acting from emotion before or instead of taking the time to gather > the facts.

Now the above was written by me but it has been made to look as if you
wrote it.

> That Dave Heil is so damned bored with life that he has to concoct things
> from thin air is usual and status quo for him.

It wasn't from thin air, Kim. It was from posts made by you. They
exist. They can't now be denied.

> Don't be so quick to jump on
> a Dave Heil bandwagon...because those wagons don't travel far at all.

I have a bandwagon?

> For anyone with computer sense, it is unreasonable to even consider that a
> post could be issued under the guise of someone else--contrary to the
> opinion that it can be done. And, when I resubmit "The Pool" list with my
> callsign attributed to my prediction date, it is certainly weak, at best, to
> display anger and make it seem as though I was doing *anything* else but
> resubmitting a post an attributing my callsign to my prediction.

That's simply incorrect.

Let's do another example for purposes of illustration:

> I have given some thought to my choice of callsigns and feel that I may have made a > mistake. My choice reflects badly on amateur radio and on me as an individual.

If not for the fact that I've made clear that this is an illustration
added by me--if I'd simply taken out the white space and my comments,
I'd be adding the material to make it look as if the statements came
from you. Are you starting to get the picture?

> However, if you or anyone else, is so desperate to reach for the stars in
> some display of dislike for me--then go for it.

No, it has simply been pointed out to you that you have crossed the line between what's right and what's wrong.

That's *your* perception.

In *my* perception, ti's the other way around.

> > > Kim
> >
> > [inappropriate callsign deleted]

> > and involved debate that had *nothing* to do with code testing.

> Ummmmm, that's quite standard for this newsgroup.

Then let me rephrase:

With just a few posts, I was able to get you and others in a long,
lengthy and involved *amateur radio policy* debate that had *nothing*
to do with code testing.

That's certainly *not* standard for this NG.

> > I exposed how some folks want *me* to follow *their* standards
> > rather than my own.
>
> Not at all. I didn't see that.

"There are none so blind as those who will not see"

I've been repeatedly told in this thread how I *must* or *should*
conduct "the pool", how I must not remove someone's callsign
from a post, how only the FCC can decide what is appropriate
and inappropriate, etc., etc., etc.

> Your angst was for the fact that someone
> changed attributes in a post.

No angst at all! In fact, someone else first pointed out
that you repeatedly responded to my posts in such a way
that it looked like I wrote something which I did not,
in fact, write.

And you did.

I did not.

> For that, you are wrong; as I am.

I'm not wrong.

Your admission of guilt in the matter is quite admirable, but
unnecessary.

> It doesn't
> matter *why* the posts are getting changed; that part of the debate was mere
> distraction.

Not a question of change. A question of how the change
altered the apparent authorship.

> Fact still remains that you

[expletive deleted]

> at me for something you, yourself, have been doing.

Incorrect! I have not intentionally made it appear
that you or anyone else wrote something you did not
write.

You did.

That's the point.
>
> > I even got you to admit something good about K3LT.
>
> There's something good in everything...and I do mean everything.

I think you mean "everyone". And I agree to that, though it takes a
lot of looking in some cases.

But not in "everything". For example, tell me what's good in:

binary nerve gases
intentional release of deadly diseases such as smallpox
drunk driving

> For each and every action, there is an equal and opposite reaction.

Only in certain physics problems. Otherwise, there are all sorts of
situations.

Sometimes actions are ignored.

Sometimes there's an over-reaction.

Sometimes there's a chain reaction.

And sometimes there's a big brouhaha and then things return to
a state indistinguishable fromthat previous to the action.

> Most people take
> that to mean good=good and bad=bad. It can also, and more often, mean
> good=bad and bad=good.

I don't take it to mean anything.
>
> > And through all that I avoided any name-calling or use of
> > inappropriate words.

> Typical behavior for you.

Thank you

> Although, the implication of you being a leg
> man--and stating so in such a way as to imply something sexual about it,
> also defeats your whole stance of removing inappropriate things from posts
> you take part in.

The subject under discussion was baked chicken, Kim. See the
original post - the poster was talking about dinner in the
oven. And it's a fact that I prefer thighs and drumsticks
to wings and [other chicken parts].

With one exception: genuine Buffalo wings - but they're not baked.

If there's anything sexual about my baked-chicken preferences, that's
in *your* mind, not in my post.

> But, you can be contradictory--that's OK.

Can be. Wasn't.

> > So I quote Maximus in the arena, surrounded by those he has

> by someone else a bit of time ago--I've been "watching" since) so if you
> want to get offended, upset, etc., about changing posts then be upset at
> yourself first.

Not the same thing at all. You're equating my editing
with your own improper attribution.

> Whether by changing attributes or deleting things from
> original posts--both a) are supposedly against standard conventions of
> newsgroups/Usenet and,

There is no convention that the entirety of a post be quoted. Headers
and footers are routinely trimmed.

There *is* a convention that the apparent authorship of words not be
changed in the process of quoting them.

> b) both could be strewn to be disrespectful,
> deceitful, inappropriate, incorrect, and causation for a long debate. You
> began the behavior before me, I trumped it.

By using the term "trump", you admit that your action was far worse
than
mine.

And mine wasn't wrong to begin with. Yours was.
>
> As I said, you may not "feel" boxed.

And I'm not.

> However, you have been just
> uncharacteristic enough in several examples that I am quite sure you were,
> in some way, caught up in being very defensive over something you did.

Being uncharacteristic is a way of drawing in the opponent. Being too
predictable sets one up for defeat. You would not have been drawn in
had I been too predictable.

> I remain with a feeling of debate victory...

That makes two of us. Maximus did not win by himself, y'know.
>
> However, there is something rather interesting about the thread the last few
> days: it's obviously had Hans occupied.

So perhaps we should ask him:

"ARE YOU NOT ENTERTAINED??!!!"

"IS THIS NOT WHAT YOU CAME TO SEE?!!!"

You never quite get things right. Dave is interested in radio. Dave
has been a licensed radio amateur for four decades. Dave knows morse.
Dave can and does download firmware for his Orion. You too can download
Orion firmware but it won't do much for you unless you buy an Orion.

That'd be you, since you're the fellow who coined the terms "Atila" and "beligerant", Leonard. You used both words more than once. Some dialect.

It's a *legal* one. No one disputes that.

> You can dislike it, revile it, be insulted by it
> - whatever you choose to do. But, you must respect the fact that it

> is a valid amateur callsign - because it is! Just like yours, issued

I did not ask for this specific callsign. Kim asked for hers.
>
> Jim, you aren't the guy who gets to determine what is or is not

Not true!

We *all* have a say in what is and is not appropriate for the ARS. And that
includes me.

> That role belongs to the regulatory authorities.

And to all of us hams.

> Whatever your problem is with this particular call, it
> is between you and the FCC - not us! If they declare that it is

> it is - it's their decision - not yours and mine!

That's only true as far as the issuance of a callsign. Not its use.
>
> As you are aware.

> >As I have stated before, no disrespect was intended. But I am not
> >going to use Kim's callsign in my posts, because I think it is

I'm not telling them not to use Kim's callsign.

You are telling me I *must* use it.

Not gonna happen.

> However, no one is trying to say that you must
> use Kim's callsign in your posts - the issue is with your intentional
> exclusion of only her callsign from your list!

Which is the same as saying I *must* use it!
>

> >
> >In your opinion. Mine's different.
>
> Compromising standards isn't the issue, Jim. As you are aware.

No, it's *exactly* the issue. To use Kim's call here would compromise my
standards.
>
> If you had changed your poll to list everyone by their first name,
> would that have compromised your standards? Of course not. It would
> have created a Level Playing Field, and caused little fuss at all.

It would have caused confusion because there are several people with
the same first name here.
>
> It would have removed the opportunity for you to try and punish Kim

What if that's the biker's name?

> Same phrase - totally different intent. Context is
> everything!
>
> As you are aware.

Yet yelling both phrases is *legal* - although not always
advisable or appropriate.

And in the context of amateur radio callsigns, I think Kim's choice
of callsign is inadvisable and inappropriate.

Your own logic proves it.
>

>
> What part of this statement are you having trouble with, Jim?

The words ""prejudice", "censorship" and "self-serving rhetoric", for a start.
They are inaccurate
>
> Definitions (and specific usage within the thread):
>
> Prejudice: "an opinion formed beforehand" (your opinion that the
> callsign

[inappropriate callsign deleted]

> is inappropriate to the ARS)

It wasn't formed beforehand. It was formed only after I encountered the
callsign and its owner here, and considered all the issues.

Therefore, it's not prejudice.
>
> Censorship: "the supression of something considered objectionable"
> (like the intentional omission of just one callsign in a list,
> perhaps?)

I use the word "inappropriate", not "objectionable". And I did not
"suppress" it - I just won't put it in a post of mine.

Therefore, it's not censorship.
>
> Rhetoric: skill with language - (ahem)
>
The phrase was "self-serving rhetoric", not just the word "rhetoric".

AHEM.

> >> I suspect that few here join you in that belief.
> >

Equal rights under law. Equal opportunities. Not equal results. Not
an abandonment of standards.
>
> Do you treat everyone equally, Jim?

I treat them appropriately. What is appropriate for an adult is not
appropriate for a child. To treat them equally could be very unsafe.

> Even when you have a strong bias
> against some characteristic of theirs that you find objectionable? No
> matter what?

The only bias I have is in my Southgate Type 7.
>
> I'd refrain from drawing parallels to Dr. King until you can state

I state without prejudice that I don't have the bias you accuse me of.
I have standards that I adhere to.

Some would. I did. So did Kim, and so have you. And while I respect
Kim's use of the word "friend", I would say that the honesty and openness
here - even in disagreement - are the actions of "true friends".

You mean Kim's changing of attributions to make it look like I wrote
something I didn't? Water under the bridge.

> Bully-like behaviour, Jim?

Not by me. Who have I tried to bully into doing or not doing anything?
Bullying is the use of force - or the threat of force. No force or
threats at all in my actions or postings.

> I wouldn't have thought it possible.

It isn't.

You seem confused again, old timer. While you tell your fish stories
and put down radio amateurs, you aren't in fact a radio amateur.

> I'm all for eliminating the morse code test from any radio license
> examination. That's all.

"Go for it, EX purchasing agent..."

"Of course you did...right after you accepted the Presidential Medal
of Freedom for keeping Homeland Security safe through ham radio."

"Yeah, like a little few-page weekly is on par with the New York
TIMES."

"MODERN HF amateur radio: 'What was good in the 1930s is still
good in 2000s!'"

"Real ham radio is working DX on HF with CW."

"Quit trying to be a Host, sweetums. The only "host" you can be is
of a communicable disease."

"Go get some therapy."

Yep, it appears quite evident from the quoted material just from one of
your posts, Len. You just want to eliminate a code test.

Let's put it in terms you might be able to understand, Leonard. Dee
lives in a nice little house with a lovely flower garden and a pond.
Some years later, an unsightly landfill is built across the road. Dee
decides to build a privacy fence of tall evergreens so she doesn't have
to view the landfill.

In this scenario, you are the landfill.

C'mon, Hans. They don't make Gremlins any longer, I've never parachuted into the Dayton fleamarket and Moms Mabley has been dead for years.

In honesty, I did buy a Chevy Vega back in '73 (much to my regret), have worn a navy blue, velvet cap with scrambled eggs on the bill and my call embroidered on the front (a gift from old salt K3FK) and I once went out with a female jailer from Savannah who kept talking about cuffs, shackles and body slams.

Those things aside, the Orion is built in the U.S. and is one fine transceiver.

Yes it is, and yes it is. Did you see ON4UN's review in the current
NCJ? Very complimentary.

But Rolling Rock beer ranks about .001 on a scale of 1 to 10, where "4"
is "barely drinkable". (Yes, that means it needs to improve 1000-fold
be be a "1".)

That wasn't the point - I said specifically that you are not the one
who gets to make that decision.

>
>> That role belongs to the regulatory authorities.
>
>And to all of us hams.

No - we can recommend and advise, but the regulatory authorities make
the decision. Not us.

>
>> Whatever your problem is with this particular call, it
>> is between you and the FCC - not us! If they declare that it is

>> it is - it's their decision - not yours and mine!
>
>That's only true as far as the issuance of a callsign. Not its use.

Absolutely. But not the point.

The issue is between you and the FCC. They issued it - they can
recall it if it's "inappropriate".

>>
>> As you are aware.
>
>> >As I have stated before, no disrespect was intended. But I am not
>> >going to use Kim's callsign in my posts, because I think it is

>> members of the ARS.

>
>I'm not telling them not to use Kim's callsign.
>
>You are telling me I *must* use it.

Incorrect. Not at all.

That isn't the issue. I said omitting just one callsign from your
post was wrong. No one denies your right to not use it - but you
could have omitted all of them, to level the field. What standards
woul that have compromised, Jim?.

>
>Not gonna happen.

>
>> However, no one is trying to say that you must
>> use Kim's callsign in your posts - the issue is with your intentional
>> exclusion of only her callsign from your list!
>
>Which is the same as saying I *must* use it!

Nope - just omitting call one out of a group was wrong. Disrespectful,
in fact - or at least perceived that way. You could have left all of
the calls out - then it wouldn't be a problem, would it?

>>
>> As you are aware.
>> >
>> >You can use it in your posts all you want. So can Kim. I won't try to

Actually, the upholding of standards...but this isn't about standards,
Jim. It's about singling someone out intentionally. And
disrespectfully.

>>
>> Do you treat everyone equally, Jim?
>
>I treat them appropriately. What is appropriate for an adult is not
>appropriate for a child. To treat them equally could be very unsafe.

Avoiding the question.

Absolutely not. But she still deserves to be addressed by it if she
so chooses (it would be kinda hard to QSO with Kim without using it!)
You are of course free to refrain from using it if you choose - but it
would be rude to do so in a manner that is intentionally designed to
discriminate against or annoy the holder of the call. Wouldn't it?
You bet.

Common courtesy cannot be mandated, Dave. Just expected.

>
>> - no one other than the FCC has the right to prevent or censor her

Now that's a friendly and considerate thing to do! The True Spirit Of
Amateur Radio right there..... :)

And all because of a call sign? Really. That's one scary call sign,
huh? Wow.
>
>
>> - if Kim interprets the intentional omittance of her callsign from
>> newsgroup posts as disrespectful towards her personally, then she and
>> I have something in common - so would I!
>
>Please point out the requirement for anyone posting here to use Kim's
>callsign.

The point was the omission of just W5TIT's call sign in the list of all the other calls, Dave. That would not be the courteous thing to do. Revising the list so that only first nams were listed, removing the problem of the 'inappropriate' call, would be.

Not the required thing, Dave - the courteous thing. Considerate, even - like the Amateur's Code says:

"CONSIDERATE...never knowingly operates in such a way as to lessen the pleasure of others."

You can read the whole thing if you like at the following address:

http://www.arrl.org/acode.html

Friendly is in there too. Worth a read sometime.

Thanks!

Personally, I don't suffer from some Freudian thing that causes me to find call signs offensive. People can be offfensive, but not call signs - it's just a license number, Dave......

Nope. Kim's putting her callsign back in to your posts (agreed, in
violation of Usenet convention) was in reaction to your intentional
changing of it to her name in your list. Against her wishes.

You remember that, don't you, Jim?
>
>> Bully-like behaviour, Jim?

It showed on the TT reflector and I saw it there. I also find it quite satisfying to wish that the transceiver would do something, to send those wishes to TT and to have them incorporate them in a firmware release.

Actually, aside from a couple of Karjalainen brews in Helsinki in October, my yearly beer intake is about four bottles. I mostly stick to vodka or with Jack Daniels and branch water.

There is no authorization from the FCC required to do public service. We
have never needed government authorization to do public service. That the
FCC has simply formally recognized the value of amateur's public service
efforts does not constitute authorization to do public service. I've read

Part 97 beginning to end. All it authorizes is the use of specific frequencies for specific license classes. It mandates meeting safety and signal requirements and operational limits. The only words relating to public service are simply those recognizing the fact of our value in public service and encouraging us to continue.

You have just demonstrated how little you know about ARES and RACES.
